Preface	ix
Abdelkhalak EL HAMI	
Chapter 1. New Intelligence Method for Machine Tool Energy Consumption Estimation	1
Dorra BEN HASSEN, Anoire BEN JDIDIA, Mohamed TAOUFIK KHBOU, Mohamed Slim ABBES and Mohamed HADDAR	
1.1. Introduction.	1
1.2. Mathematical model for estimating power consumption by the spindle and table of a mill	3
1.3. ICA method.	6
1.3.1. Pretreatment of signals.	6
1.3.2. Separation	7
1.4. Results and discussion	11
1.5. Conclusion	15
1.6. References	15
Chapter 2. Uncertainty and Artificial Intelligence: Applications to Maintenance in Additive Manufacturing.	19
Ghais KHARMANDA, Hicham BAAMMI and Abdelkhalak EL HAMI	
2.1. Introduction.	19
2.2. Integration of uncertainty.	20
2.2.1. Definition of uncertainty.	20
2.2.2. Types of uncertainty	21
2.3. Uncertainty in artificial intelligence	21
2.3.1. Concepts and challenges in artificial intelligence	21
2.3.2. Implementing artificial intelligence	22
2.3.3. Decision-making in the case of uncertainty	23

2.4. Artificial intelligence in additive manufacturing	24
2.4.1. Notions and issues in additive manufacturing	24
2.4.2. Uncertainty in additive manufacturing	25
2.4.3. Probable failure scenarios in additive manufacturing.	26
2.4.4. Integration of artificial intelligence	27
2.5. Predictive maintenance in additive manufacturing.	27
2.5.1. Tendencies in maintenance technology	27
2.5.2. Diagnostic and prognostic models	28
2.5.3. Implementation in additive manufacturing	29
2.6. Proposed strategy and applications	30
2.6.1. Examples of uncertainty in additive manufacturing.	30
2.6.2. Advanced system of quality control in additive manufacturing. . .	32
2.7. Conclusion	34
2.8. References	35
Chapter 3. Bio-Composite Structural Durability: Using Artificial Intelligence for Cluster Classification.	39
Abel CHEROUAT	
3.1. Introduction.	40
3.2. The state of acoustic emission technology.	43
3.2.1. Definition	44
3.2.2. Applications of acoustic emissions	45
3.2.3. Mechanisms responsible for AE in materials	46
3.2.4. Propagation of waves through materials	47
3.2.5. Phenomenological approach to acoustic emissions	52
3.3. The concept behind classification.	54
3.3.1. Introduction	54
3.3.2. Statistical analysis in the identification of different source mechanisms.	54
3.3.3. Classification method	56
3.4. Application to the classification of damage mechanisms in agro-composites.	62
3.4.1. Fabrication of agro-composite test tubes	63
3.4.2. Characterization of tensile tests	64
3.4.3. Classification of damage mechanisms.	74
3.5. Artificial neural networks for classifying damage	76
3.5.1. Introduction	77
3.5.2. Organization of neurons	79
3.5.3. How the neural network functions	81
3.5.4. Results and analysis	85
3.6. Conclusion	89
3.7. References	90

Chapter 4. Intelligent Control for Attenuating Vertical Vibrations in Vehicles	97
Maroua HADDAR, Fakhher CHAARI and Mohamed HADDAR	
4.1. Introduction.	97
4.2. Limits of passive and semi-active control strategies.	99
4.2.1. Limits of passive suspension	99
4.2.2. Limits of semi-active suspension.	100
4.3. Model-free control (MFC)	100
4.3.1. Ultra-local model	102
4.3.2. Online estimates of modeled and non-modeled perturbances	102
4.3.3. Intelligent controller	104
4.4. Application to the control of vertical vehicular vibrations	105
4.4.1. Performance demands	105
4.4.2. Complete vehicular model	105
4.4.3. Ultra-local models	107
4.4.4. MFC equation	109
4.4.5. Numerical simulation	110
4.5. Conclusion	115
4.6. References	115
Chapter 5. Optimization of the Power Inductor of a DC/DC Converter	119
Abdelhamid AMAR, Bouchaïb RADI and Abdelkhalak EL HAMI	
5.1. Introduction.	119
5.2. Description of the power inductor	121
5.3. Thermomechanical modeling of the power inductor.	121
5.3.1. Thermal modeling	122
5.3.2. Thermomechanical modeling.	124
5.4. Optimization methods.	126
5.4.1. Covariance matrix adaptation-evolution strategy (CMA-ES)	126
5.4.2. Covariance matrix adaptation-evolution strategy assisted by kriging (KA-CMA-ES)	129
5.5. Optimization of the power inductor	131
5.5.1. Description of the optimization problem	131
5.5.2. Results and discussion	133
5.6. Conclusion	134
5.7. References	135

Chapter 6. Study of the Influence of Noise and Speed on the Robustness of Independent Component Analysis in the Presence of Uncertainty	137
Dorra BEN HASSEN, Anoire BEN JDIDIA, Mohamed Slim ABBES, Fakher CHAARI and Mohamed HADDAR	
6.1. Introduction.	137
6.2. The model studied.	139
6.3. Construction of the road surface profile	141
6.4. The principle of the ICA method	142
6.5. Monte Carlo technique	145
6.6. Results and discussion	145
6.6.1. Implementation of the ICA approach	146
6.6.2. Influence of noise.	147
6.6.3. Influence of speed	151
6.7. Conclusion	154
6.8. References	154
Chapter 7. Multi-Objective Optimization Applied to a High Electron Mobility Transistor	157
Rabii EL MAANI, Abdelhamid AMAR, Bouchaïb RADI and Abdelkhalak EL HAMI	
7.1. Introduction.	157
7.2. Description of HEMT technology	159
7.3. Multi-physical modeling of the HEMT	160
7.3.1. Electro-thermal modeling of the HEMT	160
7.3.2. Thermomechanical modeling of the HEMT	162
7.4. The multi-objective optimization approach	165
7.4.1. Fast non-dominated sorting	166
7.4.2. Crowding distance	167
7.5. Multi-objective optimization applied to HEMT technology	168
7.5.1. Description of the optimization problem	168
7.5.2. Results and discussion	169
7.6. Conclusion	170
7.7. References	171
List of Authors	173
Index	175
