Preface	xi
Patricia DE RANGO and Fermin CUEVAS	
 Chapter 1. Hyperbaric Storage	 1
David CHAPELLE, Damien HALM and Stéphane VILLALONGA	
1.1. Compressed hydrogen	1
1.1.1. Overview of H ₂	2
1.1.2. Compression	7
1.1.3. Mechanical tank geometry.	9
1.1.4. Regulations and standards	12
1.2. Design and modeling	13
1.2.1. Tank testing	17
1.2.2. Tank geometry modeling	24
1.2.3. Behavior of the tank	28
1.2.4. Tank optimization.	35
1.2.5. Outlook	38
1.3. Manufacturing processes	38
1.3.1. Boss manufacturing.	39
1.3.2. Polymer liner manufacturing	40
1.3.3. Composite manufacturing	43
1.3.4. Developments and prospects (materials, thermoplastics, etc.)	47
1.4. Acknowledgments	52
1.5. References	52

Chapter 2. Geological Storage	57
Laurent TRUCHE and Frédéric-Victor DONZÉ	
2.1. Introduction.	57
2.2. Underground gas storage	61
2.2.1. General concepts	61
2.2.2. Salt cavern storage	62
2.2.3. Aquifer storage	63
2.2.4. Storage in depleted oil or gas reservoirs.	65
2.2.5. Storage in former coal mines	66
2.2.6. Storage in lined hard rock caverns or refrigerated cavities.	66
2.2.7. Feedback from the past.	67
2.3. Hydrodynamic properties of hydrogen in a storage context	69
2.3.1. Fluid-H ₂ interactions.	69
2.3.2. Solid-H ₂ interactions.	74
2.4. Hydrogen reactivity in underground environments	81
2.4.1. Abiotic reactivity and surface catalysis	81
2.4.2. Microbial reactivity.	86
2.5. Scientific perspectives and challenges	89
2.6. References	90
 Chapter 3. Liquid Storage: LOHC	 99
Xiaolong JI, Valérie MEILLE and Catherine PINEL	
3.1. Introduction.	99
3.2. Aromatic hydrocarbons.	100
3.2.1. Introduction	100
3.2.2. Aromatic hydrocarbon LOHC couples	104
3.3. N-containing molecules	119
3.3.1. Introduction	119
3.3.2. N-heterocycles.	119
3.3.3. Nitriles/amines	128
3.4. O-containing molecules	129
3.4.1. Introduction	129
3.4.2. Monoalcohols	130
3.4.3. Polyols	137
3.5. Amines/amides.	139
3.6. Further comparison and conclusion.	139
3.7. List of abbreviations	139
3.8. References	141

Chapter 4. Liquid Storage: Ammonia 161

Nicolas BION, Fabien CAN, Charlotte CROISÉ, Xavier COURTOIS
and Mohamed El Amine KRIBÉCHE

4.1. Introduction.	161
4.2. Ammonia as an energy carrier.	162
4.3. Compatibility with fuel cells.	164
4.4. Ammonia synthesis	166
4.4.1. The Haber–Bosch process	166
4.4.2. Ammonia synthesis catalysts	170
4.4.3. Mechanisms and limiting steps in ammonia synthesis	178
4.5. Alternative ammonia synthesis processes	181
4.6. Ammonia decomposition.	184
4.6.1. High-temperature ammonia cracking	184
4.6.2. Electro-oxidation of ammonia	187
4.7. Overview and outlook	191
4.8. References	193

**Chapter 5. Reversible Hydrogen Storage: Intermetallic
Compounds and Mg-based Materials** 203

Ghofrane FEDLOUK, Hugo BENET, Valérie PAUL-BONCOUR,
Judith MONNIER and Junxian ZHANG

5.1. Introduction.	203
5.2. Intermetallic compounds	205
5.2.1. BCC-type alloys.	205
5.2.2. AB compounds	207
5.2.3. AB ₂ compounds	208
5.2.4. AB ₅ compounds	210
5.2.5. AB _x compounds (2 < x < 5)	211
5.3. Mg-based materials	220
5.3.1. Magnesium hydride MgH ₂	220
5.3.2. Binary Mg-based compounds	226
5.3.3. Ternary Mg-based compounds	233
5.4. Conclusion	238
5.5. References	241

Chapter 6. High-Entropy Alloys for Hydrogen Storage 255

Nayely PINEDA ROMERO, Claudia ZLOTEA, Kyliia MARCUS

6.1. Context	255
6.2. High-entropy alloys	257
6.2.1. Definition of HEAs	257
6.2.2. Thermodynamics of HEAs	260
6.2.3. Elaboration methods for HEAs	264
6.2.4. Prediction of HEAs phases and element selection.	266
6.2.5. Microstructure of HEAs	267
6.2.6. Large-scale instruments for the characterization of HEAs	269
6.2.7. H ₂ storage properties in HEAs	270
6.3. Review of high-entropy alloys	278
6.3.1. bcc phase in HEAs	278
6.3.2. Intermetallic phases in HEAs	286
6.4. Conclusions and perspectives	289
6.5. References	291

Chapter 7. Regenerable Hydrides 303

Carlos A. CASTILLA-MARTINEZ, Jean-Louis BOBET and

Umit B. DEMIRCI

7.1. Introduction.	303
7.2. Alkaline hydrides	306
7.2.1. MH hydrides with M for Li, Na or K	306
7.2.2. LiH hydrolysis and hydrogen production	307
7.2.3. LiH regeneration	309
7.3. Magnesium hydrides	310
7.3.1. Introduction	310
7.3.2. MgH ₂ hydride	311
7.3.3. Magnesium alloys.	314
7.3.4. Regeneration.	316
7.4. Aluminum hydrides	317
7.4.1. Introduction	317
7.4.2. AlH ₃ alane	318
7.4.3. Lithium alanate LiAlH ₄	321
7.5. Alkali borohydrides	322
7.5.1. Introduction	322

7.5.2. Lithium borohydride LiBH_4	323
7.5.3. Sodium borohydride NaBH_4	325
7.5.4. Potassium borohydride KBH_4	328
7.6. BNH compounds	330
7.6.1. Introducing BNH compounds	330
7.6.2. Ammonia borane NH_3BH_3	331
7.6.3. Alkaline amidoboranes with M for Li, Na or K	335
7.6.4. Hydrazine borane $\text{N}_2\text{H}_4\text{BH}_3$ and its derivatives	337
7.6.5. Toward other BNH compounds.	338
7.7. Conclusions and outlook	339
7.8. References	341
 Chapter 8. Hydrogen Adsorption in High-Surface Area Porous Materials	 357
Rafael MORALES-OSPINO, Alain CELZARD and Vanessa FIERRO	
8.1. Introduction.	357
8.2. Adsorption definition and the Gibbs adsorption model	358
8.3. How to report excess amount	361
8.4. Excess amount versus adsorbed amount	362
8.5. Total stored amount and release capacity	365
8.6. Experimental procedure to obtain high-pressure isotherms.	366
8.6.1. Gravimetric method	367
8.6.2. Manometric method	369
8.7. Characterization of adsorbents for hydrogen storage	371
8.7.1. Pore volume and pore size distribution	372
8.7.2. Specific surface area	376
8.8. Adsorbents for hydrogen storage	379
8.9. Conclusion	383
8.10. References.	384
 List of Authors	 395
 Index	 399
