Preface	xiii
Rajdeep CHAKRABORTY	
Acknowledgments	xvii
Chapter 1. Introduction to Operations Research Methodologies	1
Trishit BANERJEE and Arup DASGUPTA	
1.1. Introduction	1
1.2. Decision-making framework/models for operations research	3
1.3. Operations research in IoT, IIoT, edge and smart edge computing, sensor data.	8
1.4. Paradigms and procedures	11
1.5. Conclusion	18
1.6. References	19
Chapter 2. Edge Computing: The Foundation, Emergence and Growing Applications	25
P.K. PAUL	
2.1. Introduction	25
2.2. Objective of the work	27
2.3. Methods adopted.	27
2.4. Edge computing and edge cloud: basics	27
2.5. Edge computing and edge devices	29
2.6. Edge computing: working fashions, buying and deploying and 5G	29
2.7. Functions and features of edge computing	30
2.7.1. Privacy and security	30
2.7.2. Scalability	30
2.7.3. Reliability	30

2.7.4. Speed	31
2.7.5. Efficiency	31
2.7.6. Latency and bandwidth	31
2.7.7. Reduction in congestion	32
2.8. Edge computing: applications and examples	32
2.8.1. Self-managed and automated cars/vehicles	33
2.8.2. Fleet management	34
2.8.3. Predictive maintenance	34
2.8.4. Voice assisting systems	35
2.8.5. Smart cities and town planning	35
2.8.6. Manufacturing and core sector	35
2.8.7. Healthcare and medical segment	36
2.8.8. Edge computing and augmented reality	37
2.9. Drawbacks, obstacles and issues in edge computing	38
2.10. Edge computing, cloud computing and Internet of Things: some concerns	39
2.11. Future and emergence of edge computing	41
2.12. Conclusion	42
2.13. Acknowledgment	43
2.14. References	43
Chapter 3. Utilization of Edge Computing in Digital Education: A Conceptual Overview	47
Ritam CHATTERJEE	
3.1. Introduction	47
3.2. Objectives	48
3.3. Methodology used	49
3.4. Digital education	49
3.4.1. Emerging technologies in digital education	49
3.5. Education and information science	49
3.6. Edge computing	51
3.6.1. Edge computing promotes education and information science	51
3.6.2. Conceptual overview of edge computing in education	52
3.6.3. Conceptual diagram of edge computing in education	53
3.6.4. Concept of communication between different layers of edge computing in education	55
3.6.5. Diagram of communication between different layers of edge computing in education	56
3.6.6. Stakeholder of edge computing in digital education	56
3.6.7. Advantages of edge computing in digital education	56
3.6.8. Challenges of edge computing in digital education	60

3.7. Conclusion	61
3.8. Acknowledgment	61
3.9. References	61

Chapter 4. Edge Computing with Operations Research Using IoT Devices in Healthcare: Concepts, Tools, Techniques and Use Cases 65

Shalini RAMANATHAN, Mohan RAMASUNDARAM, Tauheed KHAN MOHD and Anabel PINEDA-BRISENO

4.1. Overview	66
4.2. The smartness of edge across artificial intelligence with the IoT	68
4.2.1. Operations research in edge computing	69
4.2.2. Artificial intelligence and its innovative strategy	70
4.2.3. Machine learning and its potential application	70
4.2.4. Deep learning and its significance.	70
4.2.5. Generative adversarial network and healthcare records	71
4.2.6. Natural language processing and its driving factors	72
4.2.7. Cloud-based intelligent edge computing infrastructure	73
4.2.8. Handling security and privacy issues	74
4.3. Promising approaches in edge healthcare system	74
4.3.1. Software adaptable network	74
4.3.2. Self-learning healthcare IoT	76
4.3.3. Towards Big Data in healthcare IoT	76
4.4. Impact of smartphones on edge computing	77
4.4.1. Use in clinical practice	77
4.4.2. Application for healthcare professionals	78
4.4.3. Edge computing in cutting edge devices	78
4.4.4. Robust smartphone using deep learning	80
4.4.5. Smartphone towards healthcare IoT.	81
4.5. Tools, techniques and use cases	84
4.5.1. Smart self-monitoring healthcare system	84
4.5.2. Healthcare development tools	87
4.5.3. Simple use cases	88
4.6. Significant forthcoming of edge healthcare IoT	89
4.7. Software and hardware companies developing healthcare tools	90
4.8. Summary	90
4.9. References	91

Chapter 5. Performance Measures in Edge Computing Using the Queuing Model 97

Shillpi MISHRA

5.1. Introduction	97
-----------------------------	----

5.2. Methodology	100
5.2.1. Queuing theory on edge computing	101
5.2.2. Result	104
5.3. Conclusion	109
5.4. Future scope	109
5.5. References	109

Chapter 6. A Smart Payment Transaction Procedure by Smart Edge Computing 113

Animesh UPADHYAYA, Koushik MUKHOPADHYAY, Amejul ISLAM,
Shaon Kalyan MODAK and Debdutta PAL

6.1. Introduction	113
6.2. Related works	115
6.3. Ethereum	116
6.3.1. Ethereum's four stages of development.	117
6.4. Ethereum's components.	118
6.4.1. P2P network.	118
6.4.2. Consensus rules	119
6.4.3. Transactions	119
6.4.4. State machine	119
6.4.5. Data structures	119
6.4.6. Consensus algorithm	120
6.4.7. Economic security	120
6.4.8. Clients	120
6.5. General-purpose blockchains to decentralized applications (DApps)	120
6.6. Ether currency units	121
6.7. Ethereum wallet	121
6.7.1. MetaMask	122
6.7.2. Jaxx	122
6.7.3. MyEtherWallet (MEW)	122
6.7.4. Emerald Wallet	122
6.8. A simple contract: a test Ether faucet	123
6.9. Ethereum clients	125
6.9.1. Hardware requirements for a full node	126
6.9.2. Advantages and disadvantages of full node.	127
6.9.3. The advantages and disadvantages of public testnet	128
6.10. Conclusion	129
6.11. References	129

Chapter 7. Statistical Learning Approach for the Detection of Abnormalities in Cancer Cells for Finding Indication of Metastasis.	133
Soumen SANTRA, Dipankar MAJUMDAR and Surajit MANDAL	
7.1. Introduction	133
7.2. Edge computation: a new era	137
7.3. Impact of edge computation in cancer treatment	138
7.4. Assessment parameters operational methodologies.	139
7.5. Shape descriptor analysis: statistical approach	141
7.6. Results and discussion.	141
7.7. Conclusion	145
7.8. References	146
Chapter 8. Overcoming the Stigma of Alzheimer’s Disease by Means of Natural Language Processing as well as Blockchain Technologies	149
Kaveri BANERJEE, Priyanka BHATTACHARYA, Sandip ROY and Rajesh BOSE	
8.1. Introduction	150
8.2. Alzheimer’s disease	152
8.3. Alzheimer’s disease types.	153
8.4. NLP in chat-bots/AI companions.	155
8.5. Proposed methodologies for reduction of stigma	158
8.5.1. Proposed methodology using NLP	158
8.5.2. Model objective function of Alzheimer’s disease	159
8.6. Blockchain technology for securing all medical data.	160
8.6.1. Blockchain strategies for data privacy in healthcare.	163
8.6.2. Application of blockchain technologies.	164
8.6.3. Blockchain application intended for EHR data management	165
8.6.4. Issues with blockchain security and privacy	166
8.6.5. Challenges faced by blockchain applications.	167
8.7. Conclusion	170
8.8. Future scope	170
8.9. Acknowledgments	171
8.10. References	171
Chapter 9. Computer Vision-based Edge Computing System to Detect Health Informatics for Oral Pre-Cancer	175
Animesh UPADHYAYA, Vertika RAI, Surajit BOSE, Dipankar BHATTACHARYA and Jayanta CHATTOPADHYAY	
9.1. Introduction	175
9.2. Related works	177
9.3. Materials and methods	177
9.3.1. Microscopic imaging	177
9.3.2. Proposed methodology	178

9.3.3. RGB color segmentation	179
9.4. Results	183
9.5. Conclusion	185
9.6. References	186
Chapter 10. A Study of Ultra-lightweight Ciphers and Security Protocol for Edge Computing.	189
Debasmita PAUL, Aheli ACHARYA and Debajyoti GUHA	
10.1. Introduction	189
10.1.1. Evolution of the IoT.	190
10.1.2. Content of the review work.	190
10.2. Ultra-lightweight ciphers	192
10.2.1. SLIM	193
10.2.2. Piccolo	196
10.2.3. Hummingbird	199
10.2.4. Comparison between SLIM, Piccolo and Hummingbird ciphers	202
10.3. Ultra-lightweight security protocols	203
10.3.1. Lightweight extensible authentication protocol (LEAP).	203
10.3.2. MIFARE	207
10.3.3. Remote frame buffer (RFB)	209
10.3.4. Comparison between LEAP, MIFARE and RFB protocols	210
10.4. Conclusion	211
10.5. References	213
Chapter 11. A Study on Security Protocols, Threats and Probable Solutions for Internet of Things Using Blockchain.	215
Debajyoti GUHA	
11.1. Introduction	216
11.2. IoT architecture and security challenges	217
11.3. Security threat classifications	218
11.3.1. Low-level security threats	218
11.3.2. Intermediate-level security threats	219
11.3.3. High-level security threats	221
11.4. Security solutions for IoT	221
11.4.1. Low-level security solutions	222
11.4.2. Intermediate-level security solutions.	222
11.4.3. High-level security solutions	223
11.5. Blockchain-based IoT paradigm: security and privacy issues	224
11.5.1. Lack of IoT-centric agreement mechanisms	224
11.5.2. IoT device incorporation	224
11.5.3. Software update	224
11.5.4. Data scalability and organization.	224

11.5.5. Interoperability with the varied IoT devices organized lying on blockchain network	225
11.5.6. Perception layer	225
11.5.7. Network layer	225
11.5.8. Processing layer	225
11.5.9. Application layer	226
11.6. IoT Messaging Protocols	226
11.6.1. Hyper Text Transfer Protocol (HTTP).	226
11.6.2. Message Queue Telemetry Protocols (MQTT)	226
11.6.3. Secure MQTT (SMQTT)	227
11.6.4. Advanced Message Queuing Protocol (AMQP)	227
11.6.5. Constrained Application Protocol (CoAP)	228
11.6.6. Extensible Messaging and Presence Protocol (XMPP).	228
11.6.7. Relative study of different messaging protocols of IoT environments . .	229
11.7. Advantages of edge computing	230
11.8. Conclusion	231
11.9. References	231
List of Authors	237
Index.	241
