Preface	xi
Jacques BESSON, Frédéric LEBON and Éric LORENTZ	
Part 1. Contact and Friction	1
Chapter 1. Lagrangian and Nitsche Methods for Frictional Contact.	3
Franz CHOULY, Patrick HILD and Yves RENARD	
1.1. Introduction.	3
1.2. Small-strains frictional contact between two elastic bodies	4
1.2.1. Contact between two elastic bodies	4
1.2.2. The classical weak inequality form	7
1.2.3. The principle of duality and the weak form with multipliers	8
1.2.4. Proximal augmented Lagrangian: principle and use.	9
1.3. Finite element approximation in small deformations	12
1.3.1. State of the art, methods with multipliers	13
1.3.2. Absence of inf-sup condition and stabilized methods.	15
1.3.3. Nitsche’s method seen as a limit stabilized method model.	16
1.3.4. Relationship between Nitsche and proximal augmented Lagrangian.	19
1.3.5. The connection between Nitsche and penalty	20

1.4. Large strain finite element approximation	21
1.4.1. About contact pairing and <i>gap</i> function	23
1.4.2. Formulation of contact and friction conditions	26
1.4.3. Augmented Lagrangian and penalization	28
1.4.4. Nitsche’s method	33
1.4.5. About the value of the parameter γ	36
1.4.6. Numerical tests	36
1.5. Acknowledgments	41
1.6. References	41
Chapter 2. High-performance Computing in Multicontact Mechanics: From Elastostatics to Granular Dynamics	47
Pierre ALART	
2.1. Introduction	47
2.2. Multicontact in elastostatics	49
2.2.1. Development framework	49
2.2.2. Parallel solver preconditioning	51
2.2.3. Domain decomposition: Newton–Schur solver	53
2.3. Diffuse non-smoothness in discrete structures: tensegrity	57
2.3.1. Motivation	57
2.3.2. Domain decomposition: micro-macro LATIN solver	58
2.4. Granular dynamics	61
2.4.1. Velocity-impulse formulation	61
2.4.2. Parallelized and parallelizable solvers	63
2.4.3. Conjugate projected gradient solver	65
2.4.4. Domain decomposition: FETI-NLGS solver	66
2.5. Conclusion	73
2.6. References	75
Chapter 3. Numerical Methods in Micromechanical Contact	79
Vladislav A. YASTREBOV	
3.1. Introduction	79
3.1.1. Plan	80
3.2. Contact micromechanical problem	80
3.2.1. Surface geometry: mathematical description	80
3.2.2. Surface geometry: examples and discussions	83
3.2.3. Roughness models	85
3.2.4. Contact formalization	86
3.2.5. Laws of friction	88

3.3. Finite element method	90
3.3.1. Convergence, parameters and loading step	91
3.3.2. Convergence of friction problems	92
3.3.3. Quadratic convergence.	94
3.3.4. Mesh and computation time.	95
3.3.5. Contact constraint.	95
3.3.6. Surface regularity	97
3.4. Application I: study of an isolated asperity	98
3.4.1. Elastic asperity	98
3.4.2. Elastoplastic asperity	102
3.5. Application II: rough surface contact.	109
3.6. Conclusion	113
3.7. References	114
Part 2. Damage and Cracking	135
Chapter 4. Numerical Methods for Ductile Fracture	137
Jacques BESSON	
4.1. Introduction.	137
4.2. Physical mechanisms of ductile fracture.	138
4.3. Some ductile fracture models	139
4.3.1. Rice and Tracey model and fracture criteria	139
4.3.2. The Gurson–Tvergaard–Needleman model.	140
4.3.3. Other models.	143
4.4. Performing ductile fracture simulations with a finite elements code	143
4.4.1. Calculation parameters.	143
4.4.2. Pressure control	145
4.4.3. Application of the Rice and Tracey criterion.	146
4.4.4. GTN model application	148
4.4.5. Pragmatic solution	149
4.5. Localization origin	150
4.6. Regularization methods.	152
4.6.1. Integral methods.	152
4.6.2. Explicit or implicit gradient methods	153
4.6.3. Micromorphic models	157
4.6.4. Enhanced energy models	160
4.6.5. Example	161

4.7. Conclusion	164
4.8. References	167
Chapter 5. Quasi-brittle Fracture Modeling	175
Éric LORENTZ	
5.1. What are the approaches for predicting quasi-brittle fracture?	175
5.2. Materials with internal lengths	178
5.2.1. Localization and non-locality	178
5.2.2. Risks of ignoring the non-local nature inherent to damage.	181
5.2.3. Limitations of a localization: regularization by viscosity.	183
5.2.4. Characterization of the internal length: toward a fracture model.	185
5.3. Non-local formulations	189
5.3.1. Formulation of the mechanical problem at the structural scale	189
5.3.2. Some non-local model classes	194
5.3.3. Qualitative analysis of non-local formulations.	204
5.3.4. Phase field models and damage gradient models	207
5.3.5. Approximating a cohesive model with a gradient model.	212
5.4. Phenomenological aspects of quasi-brittle behavior	214
5.4.1. Isotropy or anisotropy?	215
5.4.2. Unilateral nature.	218
5.4.3. Asymptotic fracture behavior	222
5.5. Numerical solving methods	227
5.5.1. Impact of non-locality	228
5.5.2. Difficult to perform computations	238
5.6. Conclusion	249
5.7. References	251
Chapter 6. Extended Finite Element (XFEM) and Thick Level Set (TLS) Methods.	261
Nicolas MOËS	
6.1. Introduction.	261
6.2. Categorization of approaches to cracking	262
6.3. The XFEM method for cracking in non-softening media	264
6.4. XFEM-TLS for cracking in softening media	271
6.4.1. TLS V1 and V2 models	274
6.4.2. Relation to the Griffith model and the cohesive model	278
6.4.3. TLS: implementation aspects	278

6.5. XFEM-TLS simulation examples	282
6.5.1. Torsional chalk fracture	283
6.5.2. Multiple cracking in a block with holes	284
6.5.3. Three-point bending for a beam and cohesive crack	285
6.6. Conclusion	286
6.7. References	287
Chapter 7. Damage-to-Crack Transition	293
Sylvia FELD-PAYET	
7.1. Introduction.	293
7.1.1. Continuous damage models and their limitations	293
7.1.2. Modeling a discontinuity	295
7.1.3. Definition of a damage-to-crack transition strategy	303
7.1.4. Study objective and framework.	304
7.2. Localizing discontinuity	305
7.2.1. Formulation of an orientation criterion	305
7.2.2. From orientation criterion to crack surface	311
7.2.3. Basic evaluation methods for more regularity	315
7.2.4. Advanced evaluation methods ensuring more regularity	317
7.2.5. Constructing a continuous discretized surface in 3D	329
7.3. Inserting a discontinuity	336
7.3.1. Objectives and connection with the orientation criterion.	336
7.3.2. The different insertion criteria	338
7.3.3. Challenges associated with front determination	341
7.3.4. Outlook: strengthening the link with physics.	343
7.4. Resuming computations after inserting a discontinuity	344
7.4.1. Issues	344
7.4.2. Field transfer.	345
7.4.3. Reequilibrium	351
7.5. Conclusion	353
7.6. References	353
List of Authors	363
Index	365
