| <b>Preface</b> .....  | xi   |
| Mohamed GHOUL   |      |
| <br>  |      |
| <b>Introduction</b> .....   | xiii |
| Jean-Marc ENGASSER and Mohamed GHOUL  |      |
| <br>  |      |
| <b>Part 1. The Fundamentals of Fermentation<br/>and Photobioreactor Engineering</b> ..... | 1    |
| <br>  |      |
| <b>Introduction to Part 1</b> .....   | 3    |
| Jean-Marc ENGASSER and Mohamed GHOUL  |      |
| <br>  |      |
| <b>Chapter 1. Principles of Fermentation Engineering</b> .....                            | 9    |
| Jean-Marc ENGASSER and Mohamed GHOUL  |      |
| 1.1. Mass balances .....  | 9    |
| 1.1.1. Initial–final mass balances .....  | 10   |
| 1.1.2. Instantaneous mass balances .....  | 12   |
| 1.2. Heat balances .....  | 16   |
| 1.2.1. Heat generation rate in fermenters .....   | 17   |
| 1.2.2. Air heat input and output rates .....  | 18   |
| 1.2.3. Cooling rate of a fermenter .....  | 18   |
| 1.2.4. Heat balance of a fermenter .....  | 20   |

|  |    |
|--|----|
| 1.2.5. Example: instantaneous heat balance of an aerated fermenter . . .                             | 21 |
| 1.3. Microbial kinetics . . . . .  | 23 |
| 1.3.1. Stoichiometry of microbial reactions . . . . .  | 23 |
| 1.3.2. Fermentation rates . . . . .  | 25 |
| 1.3.3. Microbial kinetic laws . . . . .  | 33 |
| 1.4. Oxygen consumption, solubility and transfer in fermenters . . . . .                             | 44 |
| 1.4.1. Oxygen consumption rates . . . . .  | 44 |
| 1.4.2. Oxygen solubility in fermentation media . . . . .   | 52 |
| 1.4.3. Oxygen transfer rate in a fermenter . . . . .   | 55 |
| 1.4.4. Variation in dissolved oxygen concentration . . . . .   | 62 |
| 1.5. CO <sub>2</sub> production, solubility and transfer in fermenters . . . . .                     | 64 |
| 1.5.1. CO <sub>2</sub> production rate . . . . .   | 65 |
| 1.5.2. Solubility and dissociation equilibria of CO <sub>2</sub> . . . . .                           | 68 |
| 1.5.3. CO <sub>2</sub> transfer rate . . . . .   | 70 |
| 1.5.4. Variation in dissolved CO <sub>2</sub> concentration during<br>aerobic fermentation . . . . . | 71 |
| 1.6. References . . . . .  | 73 |

## **Chapter 2. Fermenter Implementation: Principle and Optimization.** . . . . . 75

Mohamed GHOUL and Jean-Marc ENGASSER

|   |     |
|---|-----|
| 2.1. Optimal fermenter implementation . . . . .   | 75  |
| 2.1.1. Fermenter optimization criteria . . . . .  | 76  |
| 2.2. Batch fermentation . . . . .   | 80  |
| 2.2.1. Principle of batch fermentations . . . . .   | 80  |
| 2.2.2. Operating variables for batch fermentations . . . . .                                    | 81  |
| 2.2.3. Batch fermentation simulation models . . . . .   | 82  |
| 2.2.4. Optimization of anaerobic fermentation implementation . . . . .                          | 85  |
| 2.2.5. Optimization of aerobic fermentations . . . . .  | 87  |
| 2.3. Continuous fermentations . . . . .   | 94  |
| 2.3.1. Principle of continuous fermentations . . . . .  | 94  |
| 2.3.2. Operating variables for continuous fermentations . . . . .                               | 95  |
| 2.3.3. Simulation model for continuous fermentations . . . . .                                  | 96  |
| 2.3.4. Continuous fermentation dynamics . . . . .   | 98  |
| 2.3.5. Steady state of continuous fermentations . . . . .                                       | 99  |
| 2.3.6. Optimization of continuous anaerobic fermentation<br>for metabolite production . . . . . | 105 |
| 2.3.7. Optimization of continuous aerobic fermentation . . . . .                                | 108 |
| 2.4. Optimal implementation of fed-batch fermentations . . . . .                                | 111 |
| 2.4.1. Principle of fed-batch fermentations . . . . .   | 111 |

|  |            |
|--|------------|
| 2.4.2. Operating variables for fed-batch fermentations . . . . .                               | 112        |
| 2.4.3. Simulation model for fed-batch fermentation . . . . .                                   | 113        |
| 2.4.4. Substrate productivity and conversion efficiency<br>for fed-batch fermentation. . . . . | 118        |
| 2.4.5. Optimization of fed-batch fermentation for cell production . . . .                      | 119        |
| 2.4.6. Optimization of fed-batch fermentation<br>for metabolite production . . . . .           | 125        |
| 2.5. References . . . . .  | 131        |
| <b>Chapter 3. Photobioreactor Engineering . . . . .</b>  | <b>133</b> |
| Hatem BEN OUADA, Jihène AMMAR and Mohamed GHOUL  |            |
| 3.1. Overview of different photobioreactor configurations. . . . .                             | 133        |
| 3.1.1. Open cultivation systems . . . . .  | 135        |
| 3.1.2. Closed systems: photobioreactors . . . . .  | 141        |
| 3.2. Conclusion . . . . .  | 147        |
| 3.3. References . . . . .  | 148        |
| <b>Chapter 4. Bioreactor Hydrodynamics and Mixing . . . . .</b>                                | <b>155</b> |
| Céline LOUBIÈRE and Eric OLMOS   |            |
| 4.1. Introduction. . . . .   | 155        |
| 4.2. Hydrodynamics and macroscopic mixing in bioreactors . . . . .                             | 156        |
| 4.2.1. Bioreactor mixing technologies. . . . .   | 156        |
| 4.2.2. Macroscopic flow fields . . . . .   | 161        |
| 4.2.3. Quantifying mixing capacities . . . . .   | 163        |
| 4.2.4. Liquid–solid mixing . . . . .   | 165        |
| 4.2.5. Liquid–gas mixing . . . . .   | 168        |
| 4.3. From macromix to micromix . . . . .   | 172        |
| 4.3.1. Fluctuations and dissipation rates of turbulent kinetic energy . . .                    | 173        |
| 4.3.2. Description and calculation of hydromechanical stresses . . . . .                       | 175        |
| 4.3.3. Spatial distribution of hydrodynamic parameters in<br>agitated tanks . . . . .          | 175        |
| 4.4. Bioreactor mixture characterization method . . . . .                                      | 176        |
| 4.4.1. Residence time and mixing time . . . . .  | 177        |
| 4.4.2. Flow and velocity fields . . . . .  | 179        |
| 4.4.3. Computational fluid dynamics simulation . . . . .                                       | 181        |
| 4.5. Hydrodynamics–kinetics coupling . . . . .   | 183        |
| 4.5.1. Kinetic models. . . . .   | 183        |
| 4.5.2. Coupling issues . . . . .   | 184        |

---

|   |            |
|---|------------|
| 4.5.3. Coupling applications . . . . .  | 185        |
| 4.6. Conclusion . . . . .   | 187        |
| 4.7. References . . . . .   | 188        |
| <br>  |            |
| <b>Chapter 5. Bioreactor Extrapolation . . . . .</b>                              | <b>191</b> |
| Céline LOUBIÈRE, Eric OLMOS and Mohamed GHOU                                      |            |
| 5.1. Introduction. . . . .  | 191        |
| 5.2. Introducing the bioreactor extrapolation concept. . . . .                    | 191        |
| 5.3. Extrapolation methods . . . . .  | 194        |
| 5.3.1. Geometric and non-geometric similarities . . . . .                         | 194        |
| 5.3.2. Scaling in non-aerated, agitation-based conditions . . . . .               | 196        |
| 5.3.3. Scaling in aerated condition and based on aeration . . . . .               | 201        |
| 5.3.4. Limits and assessment of bioreactor extrapolation strategies . . . . .     | 205        |
| 5.4. Conclusion . . . . .   | 206        |
| 5.5. References . . . . .   | 206        |
| <br>  |            |
| <b>Part 2. Examples of Bioreactor Applications in the Food Industry . . . . .</b> | <b>209</b> |
| <br>  |            |
| <b>Introduction to Part 2. . . . .</b>  | <b>211</b> |
| Mohamed GHOU  |            |
| <br>  |            |
| <b>Chapter 6. Production of Fermented Beverages: Beer . . . . .</b>               | <b>213</b> |
| Franck JOLIBERT and Mohamed GHOU  |            |
| 6.1. Introduction. . . . .  | 213        |
| 6.2. Introduction to the brewing process . . . . .                                | 214        |
| 6.2.1. Grinding and brewing operations. . . . .                                   | 215        |
| 6.2.2. Filtration and boiling operations . . . . .                                | 216        |
| 6.2.3. Whirlpool operations and cooling . . . . .                                 | 216        |
| 6.2.4. Fermentation, maturation and saturation operations. . . . .                | 217        |
| 6.3. Substrate degradation pathways. . . . .                                      | 219        |
| 6.3.1. Carbon metabolism . . . . .  | 219        |
| 6.3.2. Nitrogen metabolism . . . . .  | 220        |
| 6.3.3. Phosphorus metabolism . . . . .  | 221        |
| 6.3.4. Sulfur metabolism . . . . .  | 221        |
| 6.4. Metabolite synthesis pathways . . . . .                                      | 222        |
| 6.4.1. Synthesis of higher alcohols. . . . .                                      | 222        |

---

|  |     |
|--|-----|
| 6.4.2. Aldehyde synthesis . . . . .  | 223 |
| 6.4.3. Synthesis of organic acids . . . . .                                  | 223 |
| 6.4.4. Ester synthesis . . . . .   | 223 |
| 6.4.5. Diketone synthesis . . . . .  | 224 |
| 6.4.6. Synthesis of sulfur compounds . . . . .                               | 224 |
| 6.5. Effects of physicochemical factors on the beer production process . . . | 225 |
| 6.5.1. Effect of density . . . . .   | 225 |
| 6.5.2. Effect of temperature . . . . .                                       | 227 |
| 6.5.3. Effect of acidity . . . . .   | 227 |
| 6.5.4. Effect of inoculation rate . . . . .                                  | 228 |
| 6.5.5. Effect of pressure . . . . .  | 228 |
| 6.5.6. Effect of agitation and fermenter configuration . . . . .             | 228 |
| 6.5.7. Inhibition phenomena . . . . .  | 229 |
| 6.5.8. Infection by other microorganisms . . . . .                           | 230 |
| 6.6. New trends in the beer fermentation process . . . . .                   | 231 |
| 6.6.1. Yeast strain improvement . . . . .                                    | 232 |
| 6.6.2. Co-fermentations . . . . .  | 233 |
| 6.6.3. Fermentation processes . . . . .                                      | 234 |
| 6.6.4. Development of rapid control techniques . . . . .                     | 235 |
| 6.6.5. Conclusions and perspectives . . . . .                                | 236 |
| 6.7. References . . . . .  | 236 |

## **Chapter 7. Production of Biomass and Bioactives by Microalgae . . . . .**

239

Hatem BEN OUADA and Jihène AMMAR

|  |     |
|--|-----|
| 7.1. Introduction . . . . .                                | 239 |
| 7.2. Biomass production from microalgae . . . . .          | 240 |
| 7.3. The main bioactives derived from microalgae . . . . . | 242 |
| 7.3.1. Pigments . . . . .                                  | 243 |
| 7.3.2. Extracellular polymeric substances . . . . .        | 249 |
| 7.3.3. Lipids . . . . .                                    | 251 |
| 7.3.4. Polyunsaturated fatty acids . . . . .               | 251 |
| 7.4. Other microalgae potential . . . . .                  | 253 |
| 7.5. Conclusion . . . . .                                  | 255 |
| 7.6. References . . . . .                                  | 255 |

|---|-----|
| <b>Chapter 8. Economic and Environmental Optimization of Fermentation Processes: Ethanol and Glutamic Acid Production</b> . . . . . | 265 |
| Jean-Marc ENGASSER and Mohamed GHOU   |     |
| 8.1. Economic assessment and optimization of fermentation processes . . .   | 266 |
| 8.1.1. Methodology for economic assessment of fermentation processes. . . . .   | 266 |
| 8.1.2. Range of cost of fermentation processes . . . . .  | 267 |
| 8.1.3. Process cost analysis . . . . .  | 267 |
| 8.2. Environmental assessment and optimization of fermentation processes . . . . .  | 268 |
| 8.2.1. Environmental impacts of lifecycle assessment . . . . .  | 268 |
| 8.2.2. Assessment of environmental impact indicators . . . . .  | 269 |
| 8.2.3. Environmental analysis and optimization of fermentation processes. . . . .   | 270 |
| 8.3. Optimization of the ethanol fermentation process . . . . .   | 271 |
| 8.3.1. Ethanol production processes . . . . .   | 271 |
| 8.3.2. Kinetics of ethanol fermentation . . . . .   | 272 |
| 8.3.3. Optimum implementation of ethanol fermentation . . . . .   | 274 |
| 8.3.4. Possibilities for intensifying ethanol fermentation. . . . .   | 277 |
| 8.3.5. Environmental optimization of the ethanol production process . .   | 279 |
| 8.4. Optimization of the glutamic acid fermentation process . . . . .   | 280 |
| 8.4.1. Glutamic acid production process . . . . .   | 280 |
| 8.4.2. Kinetics of glutamic acid fermentation . . . . .   | 281 |
| 8.4.3. Optimum implementation of glutamic acid fermentation . . . . .   | 283 |
| 8.4.4. Fermentation intensification strategy . . . . .  | 288 |
| 8.4.5. Environmental optimization of the glutamic acid fermentation process . . . . .   | 289 |
| 8.5. References . . . . .   | 290 |
| <br>  |     |
| <b>Conclusion</b> . . . . .   | 293 |
