Foreword	vii
Preface	xi
Introduction	xxxii
Chapter 1. Historical Approach to Chemical or Process Engineering	1
1.1. Introduction.	3
1.2. The emergence of chemical engineering.	8
1.2.1. Balance equations.	14
1.2.2. Dimensionless numbers	15
1.3. Diffusion of chemical engineering in France	19
1.4. Training in chemical engineering	20
1.5. A question of image?	23
1.6. Placement of engineers with a degree from French grandes écoles	34
1.7. The PE engineer role	37
1.7.1. Incremental changes	38
1.7.2. Open-mindedness.	42
1.7.3. Between conformity and creativity	43
1.8. A sociological approach to future students	46
1.8.1. Heterogeneity of the university framework.	48
1.8.2. Cultural developments	49
1.9. Conclusion	51
1.10. References.	54
Chapter 2. Training in Process Engineering	65
2.1. Introduction.	67
2.2. Basic training courses.	71

2.2.1. State of play	73
2.2.2. Typology of training courses	79
2.2.3. Trends	85
2.2.4. The example of a training course, that of ENSIC	96
2.3. Relationship between estimated industrial needs and training	98
2.3.1. Information inflation	105
2.3.2. Multi and/or interdisciplinary	105
2.3.3. Internationalization of markets and supplies: globalization	108
2.3.4. Environmental aspects	108
2.3.5. Social responsibility	108
2.3.6. Participation in decision-making	117
2.3.7. Critical thinking and creativity	117
2.3.8. Ability to anticipate change	121
2.3.9. Influence of digital technologies	122
2.4. Towards new pedagogical forms	128
2.4.1. Traditional methods	136
2.4.2. Traditional tools	147
2.4.3. Methods and tools under development	151
2.4.4. Conclusion	159
2.5. Evaluation of a specific training course	160
2.5.1. Background information	161
2.5.2. Impact assessment	162
2.5.3. Student review of a course	168
2.5.4. An initial comparison	176
2.6. Conclusion	178
2.7. References	183
Appendix 1	211
Appendix 2	237
Index	271
