Introduction	xi
Chapter 1. Louis Pasteur and Silkworm Disease (1865–1870)	1
1.1. Introduction	1
1.2. Current knowledge about silkworms and pebrine disease	3
1.3. A disaster announced in France for silkworm farms	8
1.4. Knowledge acquired on pebrine in the 19th Century	10
1.5. Louis Pasteur’s work on pebrine	15
1.5.1. Louis Pasteur’s career before 1865	15
1.5.2. 1865: the discovery of pepper disease (pebrine).	18
1.5.3. 1866: what problems to solve?	22
1.5.4. 1867: the first results obtained on pebrine	34
1.5.5. 1868: industrial egg laying and flacherie disease	41
1.5.6. 1869: having his method approved by rearers	49
1.5.7. 1870: Villa Vicentina in Italy	56
1.6. Conclusion	61
Chapter 2. Ilya Metchnikov at the Pasteur Institute (1886–1916)	65
2.1. Introduction	65
2.2. Ilya Metchnikov’s biography	67
2.3. The discovery of phagocytosis, the basis of immunity, in Messina	71
2.4. Search for a phagocytic function <i>in vivo</i>	79
2.5. Metchnikov in search of a place of freedom to conduct his work	83
2.6. 1887: a meeting with Louis Pasteur	85
2.7. Metchnikov at the Pasteur Institute: affirming his conceptions	87

2.8. Metchnikov, a quality teacher-researcher: steps towards the Nobel Prize (1908)	96
2.9. Conclusion	103
Chapter 3. The Post-Metchnikov Era at the Pasteur Institute (1920–1940)	107
3.1. Introduction.	107
3.2. The researchers trained by I. Metchnikov.	109
3.2.1. Alexandre Besredka, Metchnikov’s official successor	109
3.2.2. Jules Bordet (1870–1961) Nobel Prize 1919.	111
3.2.3. Jean Cantacuzène (1863–1934), the Franco-Romanian student	114
3.2.4. Félix Mesnil (1868–1938), Head of Department at the Pasteur Institute.	123
3.3. Creation of a group on Insect immunity	127
3.3.1. Serguei Metalnikov (1870–1946): his scientific career before 1918	127
3.3.2. S. Metalnikov’s work on Insects	132
3.3.3. S. Metalnikov’s collaborators.	145
3.4. Conclusion	157
Chapter 4. André Paillot against the “Phagocytic” Dogma: Humoral Immunity	161
4.1. Introduction.	161
4.2. Precursors.	163
4.2.1. Félix d’Hérelle	163
4.2.2. Rudolph W. Glaser in the United States	164
4.3. André Paillot (1885–1944), the rebel.	167
4.3.1. His biography	167
4.3.2. André Paillot’s work on the humoral immunity of Insects.	172
4.4. “Continuers”	188
4.4.1. The work of Vladimir Zernoff	188
4.4.2. The work of André Charles Holland in Nancy.	192
4.4.3. The work of Emile Couvreur in Lyon.	193
4.5. Conclusion	195
Chapter 5. The Crossing of the Desert for Invertebrate Immunity (1960–1990)	199
5.1. Introduction.	199
5.2. The humoral immunity of Insects in North America	201

5.3. Research in France on the innate immunity of Insects.	208
5.3.1. The comparative pathology laboratory (Saint-Christol-lès-Alès)	208
5.3.2. The biological control laboratory at the Pasteur Institute	215
5.3.3. The CNRS Evolutionary Biology Laboratory (Gif-sur-Yvette).	216
5.4. Transplantation: the “door opener” expected by Invertebrate immunologists.	221
5.5. Wanting to do well, results discussed and questioned	233
5.6. Conclusion	239
Chapter 6. The Strasbourg Laboratory: Towards the Nobel Prize (2011)	245
6.1. Introduction.	245
6.2. The Strasbourg laboratory in the 1960s and 1980s.	246
6.3. The recruitment of Jules Hoffmann.	247
6.4. The work oriented towards the Insect’s molting hormone: ecdysone	250
6.5. Early work on locust immunity	251
6.6. Hans Boman’s laboratory, Stockholm University (Sweden)	255
6.7. Establishment of an “Insect Immunity” team in the Strasbourg laboratory.	261
6.8. The entire laboratory switch to “all-immunity”.	264
6.8.1. Identification of antibacterial factors (AMPs) in <i>Drosophila</i>	268
6.8.2. How are the genes encoding these antimicrobial peptides (AMPs) controlled and expressed?	274
6.8.3. How does the Insect perceive the aggression of the pathogen, and can it discriminate between these different aggressions?	282
6.9. The 2011 Nobel Prize Award recognizing innate immunity	287
6.10. Conclusion	293
Conclusion	297
Index	307
