Preface	xi
Acknowledgments	xiii
Chapter 1. Classifications and Origins of Radioactive Waste	1
1.1. Introduction	1
1.2. What is radioactive waste?	2
1.3. Classifications of nuclear waste	3
1.3.1. General information on the classification of radioactive waste	3
1.3.2. The IAEA's recommendations.	4
1.3.3. The French classification of radioactive waste	5
1.3.4. American classification.	8
1.3.5. British classification	8
1.3.6. Russian classification	9
1.3.7. Comparisons of the various classifications	9
1.3.8. Classification of sealed sources	11
1.4. Origins of nuclear waste	11
1.4.1. The main radionuclides in radioactive waste	12
1.4.2. Wastes related to the nuclear fuel cycle.	12
1.4.3. Nuclear waste from electricity production	14
1.4.4. Nuclear waste related to military activities	14
1.4.5. Wastes related to medical and industrial uses	15
1.4.6. Nuclear waste related to the dismantling of nuclear installations	16
1.4.7. Waste from nuclear accidents	17
1.5. The global radioactive waste balance	17
1.6. Conclusions	21

Chapter 2. Nuclear Waste Disposal Methods	23
2.1. Introduction. How do we get rid of nuclear waste? What solutions are there for nuclear waste in the future?	23
2.2. Nuclear waste management	24
2.2.1. Dilutions	24
2.2.2. Decontamination	26
2.2.3. Reduction of the volume of radioactive waste	27
2.2.4. Radioactive waste immobilizations	29
2.2.5. The separation of radionuclides	33
2.2.6. Packaging of radioactive waste packages	34
2.2.7. Physical decay	35
2.2.8. Final storage	37
2.2.9. Transport of nuclear materials and radioactive waste	38
2.3. The special case of long-lived radioactive waste management	39
2.3.1. Treatment and packaging	39
2.3.2. Temporary storage facilities	42
2.3.3. Long-term storage	46
2.3.4. Storage in the seabed	48
2.3.5. Geological storage in a deep continental repository	53
2.3.6. Sending into space	59
2.3.7. Immobilization in polar ice	60
2.3.8. Transmutation	61
2.4. Conclusions	65
Chapter 3. Management of Historic Radioactive Waste and Low-level Waste Around the World	67
3.1. Introduction	67
3.2. Management of historical radioactive waste	68
3.2.1. Uranium extraction and concentration waste	68
3.2.2. Direct discharges of liquid wastes into waterways and reservoirs	70
3.2.3. Historical military waste	72
3.2.4. The ancient uses of radium	73
3.2.5. Submergence in the ocean floor	73
3.3. International recommendations of the IAEA and NEA	78
3.3.1. General recommendations	79
3.3.2. Recommendations concerning graphite waste	83
3.3.3. Radioactive waste management solutions	83
3.3.4. Waiting and processing time for nuclear fuel	85
3.3.5. The need for teaching	85
3.4. Some examples of radioactive waste management	86
3.4.1. International inventories of radioactive waste	86
3.4.2. Surface storage	86

3.4.3. Geological disposal of radioactive waste	89
3.5. Radioactive waste outside the nuclear fuel cycle	93
3.5.1. Hospital and healthcare waste	93
3.5.2. Industrial and research waste	94
3.6. Conclusions	94
Chapter 4. Management of Intermediate- and High-level Nuclear Waste	97
4.1. Introduction	97
4.2. International recommendations of the IAEA and NEA.	99
4.2.1. Spent fuel management.	99
4.2.2. Management of radioactive waste resulting from a nuclear accident.	100
4.2.3. Final repositories in deep geological layers.	101
4.2.4. Site selection criteria	103
4.2.5. Temporal evolution of a deep geological repository	104
4.2.6. Underground laboratory	104
4.2.7. Retrievability and recovery	108
4.2.8. Safety file	109
4.2.9. Decision-making	112
4.2.10. Long-term evolution and post-closure monitoring	113
4.3. High-level radioactive waste management and the public	114
4.3.1. Public perception of the geological repository project.	114
4.3.2. Public information or communication about the geological repository project.	115
4.3.3. Measures to support a radioactive waste management project	116
4.3.4. Public participation in the geological repository project.	117
4.3.5. Information for future generations.	118
4.4. Alternative solutions.	120
4.4.1. Underwater temporary storage.	120
4.4.2. An interim solution: dry storage	120
4.4.3. A waiting stage: long-term storage	120
4.4.4. The American perspective of deep drilling	121
4.5. Management of high-level radioactive waste by the various States	121
4.5.1. States advocating a closed nuclear fuel cycle.	123
4.5.2. States that have reprocessed spent fuel in the past	127
4.5.3. States with an open nuclear fuel cycle	136
4.6. Conclusions	143
Chapter 5. Nuclear Waste Management in France.	145
5.1. Introduction	145
5.2. Direct discharges into the environment	147
5.2.1. The nuclear study centers	147

5.2.2. Nuclear reactors	148
5.2.3. Fuel cycle plants	148
5.3. The inventory of nuclear waste in France	149
5.3.1. Military waste	149
5.3.2. Civilian waste	152
5.4. Nuclear waste management in France	157
5.4.1. The regulatory context	157
5.4.2. The National Radioactive Materials and Waste Management Plan (PNGMDR)	158
5.4.3. The different actors in nuclear waste management in France	159
5.5. The organization of storage for identified waste	164
5.5.1. The various types of containers	164
5.5.2. The management of very short-lived radioactive waste	166
5.5.3. Management of very low-level radioactive waste	166
5.5.4. Disposal centers for low- and intermediate-level short-lived nuclear waste in France	167
5.5.5. Management of low-level, long-lived nuclear waste in France	168
5.5.6. Management of long-lived intermediate- and high-level waste in France	170
5.5.7. Fierce opposition and the arrival of social problems	184
5.5.8. A centralized pool as an interim option	185
5.5.9. Radioactive waste from the reprocessing of foreign spent fuel	186
5.6. The management of specific waste and waste without a channel	188
5.6.1. Management of historical waste	189
5.6.2. Storage of tritiated waste	190
5.6.3. Waste of natural origin	191
5.6.4. Submerged waste	194
5.7. French challenges to the radioactive waste management policy	195
5.8. Conclusions	197
5.8.1. Shortcomings in several categories of radioactive waste	197
5.8.2. Recent developments in French nuclear policy	197
5.8.3. Policy change on the closed cycle?	198
5.8.4. Redefinition of radioactive waste and radioactive material	198
5.8.5. The cost of waste management	199
Chapter 6. General Conclusions	201
6.1. Introduction	201
6.2. The main problems concerning radioactive waste	201
6.2.1. The problem of multiple classifications	201
6.2.2. Radioactive waste or nuclear material?	202
6.2.3. Waste without a channel	202
6.2.4. Long-lived waste	202

6.2.5. Very low-level waste	202
6.3. Innovations in radioactive waste management	203
6.3.1. Research on separation and transmutation	203
6.3.2. Research on the aging of packaging	204
6.3.3. Research on recycled nuclear fuel and cladding	206
6.3.4. Research on deep burial	207
6.3.5. Communication to the public	211
List of Acronyms	213
References	219
Index	251
