Introduction	xi
Nicolas BELLAHSEN and Claudio L. ROSENBERG	
Part 1. Historical Introduction.	1
Chapter 1. Alpine Sections Through Time: A Mirror of Evolving Observations and Thoughts on the Tectonics of the Alps	3
Claudio L. ROSENBERG	
1.1. Introduction.	3
1.2. Transition from landscape drawings to cross-sections: beginning of the 18th to the first half of the 19th century	5
1.3. Cross-sections between 1840 and 1880: first attempts toward interpretative sections	15
1.4. Cross-sections in the last two decades of the 19th century: the first kinematic interpretations	22
1.5. The beginning of the 20th century: first orogen-scale sections and the description of nappe piles	29
1.6. Argand and the invention of crustal plate tectonics (1916–1924)	42
1.7. Alpine cross-sections after Argand and before Plate Tectonics (1924–1960)	46

1.8. Alpine cross-sections after Plate Tectonics	49
1.8.1. Geophysical interpretations	49
1.8.2. Geological interpretations	53
1.9. Integrating deep geophysical imaging with surface structures (NFP20; Ecors-CROP)	58
1.10. Discussion and conclusion	59
1.10.1. Changing style of cross-sections as a function of changing interpretations of the Alps.	59
1.10.2. Historical evolution of the nappe concept as shown by cross-sections	62
1.10.3. Plate Tectonics.	65
1.11. References.	66
Part 2. Recent and Present-Day Alpine Chain.	77
Chapter 2. What We (Possibly) Know About the 3D Structure of Crust and Mantle Beneath the Alpine Chain.	79
Anne PAUL	
2.1. Introduction.	79
2.2. Probing a very complex crust and crust-mantle boundary	83
2.2.1. A quick update on crustal exploration methods	83
2.2.2. Crustal tomography at the scale of the entire Alpine belt	85
2.2.3. Crustal structure imaged along seismic transects across the Alps	89
2.3. Probing subduction slabs and mantle fabrics	96
2.3.1. Subduction slabs	96
2.3.2. Mantle fabrics imaged by seismic anisotropy	103
2.4. Conclusion	106
2.5. Acknowledgments.	107
2.6. References	107
Chapter 3. Topography and Landscape Evolution of the Alps	115
Gerit GRADWOHL, Kurt STÜWE, Jörg ROBL and Moritz LIEBL	
3.1. Introduction.	116
3.2. The Alps today.	119

3.3. Deriving the history of topography	122
3.3.1. Morphometric analysis.	123
3.3.2. Sediment budget.	128
3.3.3. Thermochronometric data	131
3.3.4. Direct surface dating	133
3.4. Landscape evolution since the Eocene	136
3.5. Drivers of topography and landscape evolution	142
3.6. Conclusion	146
3.7. Acknowledgments.	147
3.8. References	147
Chapter 4. Late-Orogenic Extension and Current Tectonics in the Western and Central Alps: A Review	161
Christian SUE	
4.1. Introduction.	162
4.2. Neogene brittle deformation: data analysis	164
4.2.1. Methodology, field strategy and data collection	164
4.2.2. Observations: some typical structures	167
4.2.3. Quantitative analysis of brittle deformation and kinematic synthesis.	170
4.2.4. Brittle deformation dating and chronological considerations	174
4.3. From Neogene tectonics to current activity	178
4.3.1. Seismotectonic synthesis	181
4.3.2. Geodetic strain field	184
4.4. Interpretations and discussion: some insights on the alpine geodynamic processes	188
4.4.1. Miocene orogen-parallel extension.	188
4.4.2. Plio-quadernary and current orogen-perpendicular extension	189
4.5. Concluding remarks.	194
4.6. Acknowledgments.	195
4.7. References	195
Part 3. Regional Alpine Studies from Extension to Collision	209
Chapter 5. Tectonic Evolution of the Eastern Alps	211
Walter KURZ, Harald FRITZ, Andreas WÖLFLE	
5.1. Introduction.	211
5.2. The Eastern Alps: Overview.	212

5.3. Tectonic units of the Eastern Alps	218
5.3.1. Units derived from the (Mesozoic to Paleogene) European continent	218
5.3.2. Penninic nappes	221
5.3.3. Adriatic margin	223
5.3.4. Meliata unit	225
5.3.5. Eocene to Miocene magmatism.	226
5.4. Distribution and timing of metamorphism within the Eastern Alps . . .	226
5.4.1. Variscan collisional event (Late Devonian to Carboniferous) . . .	226
5.4.2. Permian extensional event.	227
5.4.3. Alpine subduction and collision (Late Jurassic to Neogene) (Eo-Alpine and Neo-Alpine event)	228
5.5. Austroalpine paleogeography and tectonics.	230
5.5.1. Kinematics and timing of Austroalpine nappe stacking and extension	235
5.5.2. Post Eo-Alpine evolution	241
5.6. Cenozoic tectonics.	243
5.6.1. Penninic and Sub-Penninic nappe tectonics	243
5.6.2. Lateral extrusion in the Eastern Alps	252
5.6.3. Constraints on vertical movements – late Alpine cooling	263
5.6.4. Deep structure of the Eastern Alps	264
5.7. Conclusion	266
5.8. References	267
Chapter 6. Alpine Corsica: From Tethys Subduction to Mediterranean Extension	293
Jacques MALAVIEILLE and Giancarlo MOLLI	
6.1. Introduction.	293
6.2. Overall architecture of Corsica	294
6.3. Corsica as part of the Alps or the Apennines?	296
6.4. Formation and exhumation of the high-pressure rocks in Corsica and the vergence of the subduction	297
6.5. Was there a micro-continent or an arc between Corsica and Adria and what is the origin of the “Nappe Supérieure”?	302
6.6. Age of subduction-related deformations	304
6.7. The role of Apenninic tectonics and the final shaping of Alpine Corsica.	307

6.8. The geodynamic model for the Alpine Corsica: from Tethys subduction to Mediterranean extension	308
6.9. Acknowledgments	312
6.10. References.	312
