<b>Foreword</b> . . . . .	ix
<b>Part 1. Tutorials</b> . . . . .	1
<b>Chapter 1. Theory of Information: Problems 1 to 15</b> . . . . .	3
1.1. Problem 1 – Entropy . . . . .	3
1.2. Problem 2 – K-order extension of a transmission channel . . . . .	6
1.3. Problem 3 – Compressed speech digital transmission and Huffman coding. . . . .	11
1.4. Problem 4 – Coding without and with information compression . . . . .	13
1.5. Problem 5 – Digital transmission of a TV signal (luminance component only) with information compression and Huffman coding. . . . .	17
1.6. Problem 6 – Information, entropy, codes (1) . . . . .	21
1.7. Problem 7 – Information, entropy, codes (2) . . . . .	27
1.8. Problem 8 – Coding and transmission of a television-type information source . . . . .	34
1.9. Problem 9 – Entropy and motion information encoding of multimedia source . . . . .	42
1.10. Problem 10 – Hamming coding . . . . .	47
1.11. Problem 11 – Cyclic coding (1) . . . . .	53
1.12. Problem 12 – Cyclic coding (2) . . . . .	60
1.13. Problem 13 – Cyclic coding and Hamming coding (1) . . . . .	66
1.14. Problem 14 – Cyclic coding and Hamming coding (2) . . . . .	69
1.15. Problem 15 – Cyclic code, M-sequences, and Gold sequences. . . . .	75

---

<b>Chapter 2. Baseband Digital Transmission: Problems 16 to 26</b> . . . . .	83
2.1. Problem 16 – Entropy and information to signal source coding . . . . .	83
2.2. Problem 17 – Calculation of autocorrelation function and power spectral density by probabilistic approach of RZ and NRZ binary on-line codes . . . . .	89
2.3. Problem 18 – Calculation of the autocorrelation function and the power spectral density by probabilistic approach of the bipolar RZ code . . . . .	108
2.4. Problem 19 – Transmission using a partial response linear coding . . . . .	124
2.5. Problem 20 – Signal information coding and digital transmissions with partial response linear encoder . . . . .	129
2.6. Problem 21 – Baseband digital transmission system (1) . . . . .	135
2.7. Problem 22 – Baseband digital transmission (2) . . . . .	144
2.8. Problem 23 – M-ary digital baseband transmission . . . . .	152
2.9. Problem 24 – Baseband digital transmission of bipolar coded information. . . . .	163
2.10. Problem 25 – Baseband transmission and reception using a partial response linear coding (1). . . . .	181
2.11. Problem 26 – Baseband transmission and reception using a partial response linear coding (2). . . . .	189
<b>Chapter 3. Digital Transmissions with Carrier Modulation: Problems 27 to 33</b> . . . . .	199
3.1. Problem 27 – Digital transmissions with carrier modulation . . . . .	199
3.2. Problem 28 – 4-QAM digital modulation transmission (1) . . . . .	209
3.3. Problem 29 – Digital transmissions with 2-ASK modulation . . . . .	219
3.4. Problem 30 – 4-QAM digital modulation transmission (2) . . . . .	226
3.5. Problem 31 – Digital transmissions with 4-QAM digital modulation: case of single and double paths propagation . . . . .	235
3.6. Problem 32 – Performance of digital modulations and 16-QAM digital modulation. . . . .	245
3.7. Problem 33 – QAM encoding and transmission of motion information of digital video . . . . .	253

---

<b>Part 2. Practical Works</b> . . . . .	265
<b>Chapter 4. Study of the Transmission of Digital Information on Two-wire Cables</b> . . . . .	267
4.1. Introduction. . . . .	267
4.2. Recall of essential results on transmission line theory. . . . .	268
4.3. Practical study . . . . .	269
4.4. Objectives. . . . .	270
4.5. Measurement of the characteristic impedance $Z_c$ by a reflectometry method (Time Domain Reflectometry: TDR). . . . .	270
4.6. Measurement of attenuation $\alpha$ as a function of frequency . . . . .	271
4.7. Variation of the attenuation $\alpha$ as a function of length . . . . .	271
4.8. Measurement of the bitrate $D$ (bit/s) . . . . .	272
<b>Chapter 5. Study of Baseband Digital Transmission Systems for the Transmission of Analog Signals (Transmitter and Receiver)</b> . . . . .	273
5.1. Objectives. . . . .	273
5.2. First part – Study of a pulse amplitude modulation and time division multiplex signal transmission system . . . . .	274
5.2.1. Experimental study . . . . .	275
5.3. Second part – Study of a pulse code modulation (PCM) signal transmission system and transmission error control (error detector code and error corrector code) . . . . .	277
5.3.1. Experimental study . . . . .	280
<b>Chapter 6. Study of On-line Codes for Baseband Modulation and Carrier Modulation</b> . . . . .	283
6.1. Objectives. . . . .	283
6.2. Description of the electronic boards . . . . .	283
6.3. First part – Study of on-line codes for baseband digital transmission . . . . .	285
6.3.1. Experimental part. . . . .	285
6.4. Second part – Study of digital modulations with carrier . . . . .	286
6.4.1. Amplitude shift keying modulation (ASK). . . . .	286
6.4.2. Digital frequency shift modulation (FSK) . . . . .	287
6.4.3. Phase shift keying modulation (PSK) . . . . .	288

<b>Chapter 7. Study of a QPSK Modem Under MATLAB, Simulink, Communications and DSP</b> . . . . .	291
7.1. Objective . . . . .	291
7.2. Required work . . . . .	292
7.3. Appendix: Diagrams of the QPSK modem and its different blocks . . . . .	293
<b>Chapter 8. Study of a Coding and Decoding System by Cyclic Codes</b> . . . . .	297
8.1. Objective . . . . .	297
8.2. Recall of the principles of cyclic coding and decoding . . . . .	297
8.3. Coding by division: systematic code . . . . .	298
8.4. Decoding by division: principle of calculating the syndrome . . . . .	299
8.5. Required work . . . . .	300
8.6. Appendix: Block diagrams. . . . .	301
<b>References</b> . . . . .	305
<b>Index</b> . . . . .	307
