<b>Foreword</b> . . . . .	xv
Youngil LEE	
<b>Preface</b> . . . . .	xvii
Laxman SINGH and Sunil KUMAR	
<b>Acknowledgments</b> . . . . .	xxi
Laxman SINGH and Sunil KUMAR	
<b>Chapter 1. Micro- and Nano-Plastic Pollution: Present Status on Environmental Issues and Photocatalytic Degradation.</b> . . . . .	1
Monika VERMA, Yashaswini and Sujata KUNDAN	
1.1. Introduction. . . . .	2
1.2. MPs and NPs: Sources, impact and health hazards . . . . .	4
1.2.1. Micro-plastics . . . . .	4
1.3. Nano-plastics . . . . .	6
1.3.1. Sources and environmental risks . . . . .	6
1.4. Impact of Covid-19 on plastic pollution . . . . .	7
1.5. Methods for plastic degradation. . . . .	8
1.5.1. Current methods for plastic degradation . . . . .	8
1.5.2. Emerging solutions for plastic degradation. . . . .	8
1.6. Conclusion . . . . .	12
1.7. Future directions for plastic pollution control. . . . .	12
1.8. References . . . . .	12

---

<b>Chapter 2. Metal Oxide-based Smart Materials for Photocatalytic Degradation of Micro- and Nano-Plastics</b> . . . . .	19
Roopam GAUR and Satyendra SINGH	
2.1. Introduction. . . . .	19
2.2. Metal oxide photocatalysts and their characteristics . . . . .	21
2.2.1. TiO <sub>2</sub> . . . . .	24
2.2.2. ZnO . . . . .	27
2.2.3. CuO . . . . .	29
2.2.4. NiO . . . . .	30
2.3. Conclusion and future prospectives. . . . .	30
2.4. Acknowledgments . . . . .	31
2.5. References . . . . .	31
<b>Chapter 3. WO<sub>3</sub>-based Smart Material for Photocatalytic Degradation of Micro- and Nano-Plastic</b> . . . . .	37
Rachana SAIN and Sudarshan SARKAR	
3.1. Overview of micro- and nano-plastics . . . . .	37
3.2. Photocatalytic degradation mechanism . . . . .	42
3.3. Tungsten trioxide (WO <sub>3</sub> ) . . . . .	47
3.3.1. (WO <sub>3</sub> )-based smart materials . . . . .	48
3.3.2. Synthesis of WO <sub>3</sub> -based smart material. . . . .	49
3.3.3. A few WO <sub>3</sub> -based smart materials . . . . .	51
3.4. Applications and future scope . . . . .	52
3.5. References . . . . .	54
<b>Chapter 4. The Chemistry of Carbon Nanotubes in Photocatalytic Degradation of Micro- and Nano-Plastic</b> . . . . .	61
Manish KUMAR and Sunil KUMAR	
4.1. Introduction. . . . .	61
4.2. Micro- and nano-plastic . . . . .	63
4.3. Carbon nanotube materials. . . . .	65
4.4. Coating of carbon nanotube as photocatalytic degradation materials. . . . .	66
4.4.1. TiO <sub>2</sub> coating . . . . .	66
4.4.2. ZnO coating . . . . .	68
4.5. Functionalized carbon nanotube as photocatalytic degradation materials. . . . .	69
4.5.1. Single wall carbon nanotube . . . . .	70
4.5.2. Multiwall carbon nanotube . . . . .	71

4.5.3. Noncovalent endohedral and exohedral functionalization with surfactants . . . . .	73
4.5.4. Graphene-functionalized carbon nanotube . . . . .	74
4.6. Hetero atom doping of carbon nanotube as photocatalytic degradation material . . . . .	75
4.7. Conclusion . . . . .	76
4.8. References . . . . .	76

### **Chapter 5. Environmental Justifications of MXene towards Photocatalytic Capture and Conversion of Micro- and Nano-Plastic. . . . .**

Sweta SINGH and Abhijeet KUMAR

5.1. Introduction. . . . .	82
5.2. Nanomaterial catalyzed methods for the degradation of micro- and nano-plastics . . . . .	86
5.3. Photocatalytic degradation of micro- and nano-plastics. . . . .	87
5.4. MXene: a nanomaterial with diverse applications . . . . .	91
5.5. Important properties of MXenes . . . . .	93
5.6. Application of MXene as photocatalyst . . . . .	95
5.7. Application of MXene-based materials for the degradation of organic pollutants . . . . .	95
5.8. MXene as photocatalyst for degradation of MPs and NPs . . . . .	96
5.9. Conclusion . . . . .	97
5.10. References. . . . .	97

### **Chapter 6. Metal–Organic Framework based on Functional Materials for Photocatalytic Degradation of Micro- and Nano-Plastic. . . . .**

Vinita, Madhu TIWARI, Pravesh Kumar YADAV, Arun Pratap VERMA, Chandrakala SINGH and Sudhakar PANDEY

6.1. Introduction. . . . .	105
6.2. Historical background and discovery of metal–organic frameworks . . . . .	106
6.3. Bonding in metal–organic frameworks . . . . .	107
6.4. Dimensionality of metal–organic frameworks . . . . .	108
6.5. Methods for the synthesis of metal–organic frameworks . . . . .	109
6.5.1. Ultrasonic synthesis . . . . .	111
6.5.2. Electrochemical synthesis . . . . .	111
6.5.3. Mechanochemical synthesis. . . . .	111
6.5.4. Microwave synthesis . . . . .	112

6.6. Properties of metal–organic frameworks . . . . .	112
6.7. Micro- and nano-plastics . . . . .	113
6.7.1. Photocatalytic degradation of micro- and nano-plastics . . . . .	114
6.7.2. Mechanism of photocatalytic degradation . . . . .	115
6.7.3. Changes in micro-/nano-plastics morphology in photocatalytic degradation. . . . .	117
6.8. Factors influencing photocatalytic degradation efficiency . . . . .	117
6.9. Role of micromotors in photocatalytic degradation of MPs/NPs . . . . .	118
6.10. Photocatalytic water purification: removal of micro- and nano-plastics from water. . . . .	119
6.10.1. Photocatalytic degradation of polyethylene terephthalate nano-plastics . . . . .	121
6.10.2. Photodisintegration of emerging pollutants. . . . .	123
6.11. References. . . . .	125

**Chapter 7. Carbon-based Materials for Photocatalytic  
Degradation of Micro- and Nano-plastics. . . . .** 133

Chandrakala SINGH and Devjani ADHIKARI

7.1. Introduction. . . . .	133
7.2. Classification of carbon-based nanomaterials. . . . .	135
7.2.1. Carbon nanotubes. . . . .	135
7.2.2. Single-walled carbon nanotubes . . . . .	136
7.2.3. Double-walled carbon nanotubes . . . . .	137
7.2.4. Multi-walled carbon nanotubes. . . . .	137
7.2.5. Fullerene . . . . .	138
7.2.6. Nanodiamonds . . . . .	138
7.2.7. Carbon dots . . . . .	139
7.2.8. Graphene. . . . .	139
7.2.9. Graphene nanoribbons . . . . .	140
7.2.10. Graphene quantum dots . . . . .	140
7.3. An overview of photocatalysts' breakdown of MPs and NPs . . . . .	145
7.4. Carbonaceous nanomaterials. . . . .	147
7.4.1. Graphene, RGO (reduced graphene oxide) and GO. . . . .	147
7.4.2. Carbon nanotubes. . . . .	147
7.4.3. Nano-graphite . . . . .	148
7.4. Conclusion . . . . .	149
7.5. References . . . . .	149

---

**Chapter 8. Graphene-based Materials for Photodegradation of Micro- and Nano-Plastics** . . . . . 159

Geeta SINGH and Preeti GUPTA

8.1. Introduction. . . . .	160
8.1.1. Overview of micro-plastics . . . . .	160
8.1.2. Overview of nano-plastics. . . . .	161
8.1.3. Environmental impact of micro- and nano-plastics . . . . .	162
8.1.4. Better alternatives to plastics . . . . .	163
8.1.5. Status of plastic recycling in India with other countries . . . . .	164
8.2. Graphene-based materials . . . . .	165
8.3. Structure and characteristics of graphene-based materials . . . . .	166
8.4. Photodegradation and graphene-based materials . . . . .	170
8.5. Application of GMBs in removal/degradation/remediation of different pollutants . . . . .	171
8.6. Photodegradation of micro- and nano-plastics by graphene-based materials . . . . .	172
8.7. Challenges and future perspectives . . . . .	173
8.8. Environmental fate of graphene-based materials. . . . .	173
8.9. Conclusion . . . . .	174
8.10. References. . . . .	175

**Chapter 9. 2D Nanomaterials for Photocatalytic Degradation of Micro- and Nano-Plastics** . . . . . 183

Thakur Prasad YADAV and Kalpana AWASTHI

9.1. Introduction. . . . .	184
9.2. 2D materials . . . . .	185
9.2.1. Graphene family . . . . .	185
9.2.2. Transition metal dichalcogenides and MXenes . . . . .	187
9.2.3. Phosphorene . . . . .	188
9.2.4. Oxides and hydroxide materials . . . . .	189
9.3. Synthesis of 2D materials . . . . .	189
9.4. Properties and applications of 2D materials. . . . .	191
9.5. Application of 2D materials in photocatalytic degradation . . . . .	192
9.6. Micro- and nano-plastics . . . . .	194
9.7. Micro- and nano-plastics identification . . . . .	196
9.7.1. Microscopy: stereo microscopy and dissecting microscopy. . . . .	196
9.7.2. Fluorescence microscopy . . . . .	196
9.7.3. Transmission electron microscopy. . . . .	197
9.7.4. Scanning electron microscopy . . . . .	198
9.7.5. Atomic force microscopy . . . . .	199

9.7.6. FTIR spectroscopy . . . . .	200
9.7.7. Raman spectroscopy . . . . .	201
9.7.8. Thermal analysis . . . . .	201
9.7.9. New approaches and new identification strategies . . . . .	203
9.7.10. Impact of micro- and nano-plastics on human health . . . . .	203
9.8. Photocatalytic degradation of micro- and nano-plastic . . . . .	204
9.9. Photocatalytic degradation of micro- and nano-plastic through 2D materials . . . . .	204
9.10. Summary and conclusion . . . . .	206
9.11. Acknowledgments . . . . .	206
9.12. References. . . . .	206

**Chapter 10. Hybrid 2D-Smart Materials in Photocatalytic Degradation of Micro- and Nano-Plastics. . . . . 215**

Niranjan PATRA, Gudiguntla RAVI, Muddada Jaya SURYA  
and Akil AHMAD

10.1. Introduction . . . . .	215
10.2. 2D materials: properties and functionalities . . . . .	217
10.2.1. Electronic properties . . . . .	217
10.2.2. Optical properties . . . . .	218
10.2.3. Mechanical properties . . . . .	218
10.2.4. Thermal properties . . . . .	219
10.2.5. Chemical properties and functionalization . . . . .	219
10.2.6. Synergistic effects in hybrid 2D materials . . . . .	220
10.3. Hybrid 2D-smart materials: design and synthesis. . . . .	220
10.3.1. Synthesis techniques . . . . .	221
10.3.2. Examples of hybrid 2D-smart materials. . . . .	222
10.4. Mechanisms of photocatalytic degradation of micro- and nano-plastics. . . . .	222
10.4.1. Initiation of degradation . . . . .	223
10.4.2. Role of photocatalyst morphology and composition . . . . .	224
10.4.3. Pathways of degradation . . . . .	224
10.4.4. Environmental factors and degradation efficiency. . . . .	225
10.5. Degradation of micro-plastics in marine environments . . . . .	225
10.5.1. Photocatalytic degradation of nano-plastics in wastewater treatment . . . . .	228
10.5.2. Integration of photocatalytic coatings in water purification systems . . . . .	229
10.5.3. Photocatalytic degradation of micro-plastics in agricultural soils . . . . .	229

10.6. Challenges, limitations and future scopes . . . . .	230
10.7. Conclusions . . . . .	232
10.8. References. . . . .	232

**Chapter 11. Design and Structural Modification of Advanced Biomaterials for Photocatalytic Degradation of Micro- and Nano-Plastics . . . . . 241**

Nisha MANDLOI, Poonam SHARMA, Aakanksha MEWAL  
and Ajit Kumar VARMA

11.1. Introduction . . . . .	242
11.1.1. Plastic pollution: a global challenge . . . . .	242
11.1.2. Photocatalytic degradation: a green approach . . . . .	244
11.2. Smart biomaterials: overview and selection criteria . . . . .	249
11.2.1. Definition and characteristics of smart biomaterials. . . . .	249
11.2.2. Selection criteria for smart biomaterials. . . . .	253
11.3. Design principles for enhanced photocatalysis . . . . .	254
11.3.1. Tailoring optical properties . . . . .	255
11.3.2. Surface functionalization for targeted activity . . . . .	258
11.4. Structural modifications for improved efficiency. . . . .	261
11.4.1. Nanocomposite formation . . . . .	262
11.4.2. Porosity enhancement . . . . .	263
11.5. Case studies and applications . . . . .	265
11.5.1. Titanium dioxide nanomaterials . . . . .	265
11.5.2. Graphene-based smart biomaterials . . . . .	267
11.6. Challenges and future perspectives . . . . .	271
11.6.1. Overcoming biocompatibility concerns . . . . .	272
11.6.2. Scalability and cost-effectiveness . . . . .	273
11.6.3. Integration with other remediation techniques . . . . .	274
11.7. Conclusion . . . . .	276
11.8. References. . . . .	276

**Chapter 12. Nanocomposites: Sustainable Resources for Photodegradation of Micro- and Nano-Plastics . . . . . 281**

Nisha SHANKHWAR, Pinki SINGH, Jewel THOMAS and Satyendra SINGH

12.1. Introduction . . . . .	282
12.1.1. Addressing environmental challenges with nanocomposites. . . . .	282
12.2. Photocatalytic degradation of micro- and nano-plastics . . . . .	283

---

12.3. Nanocomposites in environmental remediation . . . . .	284
12.3.1. Understanding nanocomposites . . . . .	284
12.3.2. Enhanced mechanical, thermal, electrical and optical properties . . . . .	285
12.3.3. Nanocomposite composition and structure . . . . .	285
12.4. Synthesis of nanocomposites. . . . .	286
12.4.1. Synthesis techniques . . . . .	287
12.4.2. Optimization of synthesis parameters . . . . .	287
12.5. Photodegradation mechanisms. . . . .	288
12.5.1. Mechanism of photocatalytic reaction . . . . .	289
12.5.2. Energy absorption and electron–hole pair generation . . . . .	289
12.5.3. Charge aggregation and surface migration . . . . .	289
12.5.4. Redox reactions at the interface. . . . .	289
12.5.5. Oxygen evolution reaction (OER) in an oxygen-rich atmosphere. . . . .	289
12.5.6. Hydrogen evolution reaction (HER) in an inert atmosphere . . . . .	290
12.6. Nanocomposites for micro- and nano-plastic degradation. . . . .	290
12.6.1. Titanium dioxide and modified composites. . . . .	291
12.6.2. Zinc oxide and modified composites. . . . .	292
12.6.3. Zirconium dioxide and modified composites . . . . .	293
12.6.4. Tungsten trioxide and modified composites . . . . .	293
12.6.5. Carbon nitride-based composites . . . . .	293
12.6.6. Perovskite-like materials. . . . .	293
12.7. Photodegradation efficiency . . . . .	293
12.7.1. Light absorption . . . . .	294
12.7.2. Electron–hole pair generation . . . . .	295
12.7.3. Reactive oxygen species formation . . . . .	295
12.7.4. Interaction with micro- and nano-plastics. . . . .	295
12.7.5. Mineralization . . . . .	295
12.8. Applications and case studies . . . . .	295
12.8.1. Nanocomposites for micro- and nano-plastic pollution control . . . . .	296
12.8.2. Application in photodegradation . . . . .	296
12.9. Challenges and considerations/future directions . . . . .	297
12.9.1. Future vistas and emerging trends . . . . .	297
12.9.2. The power of cross-disciplinary collaboration . . . . .	297
12.10. Conclusion. . . . .	298
12.11. Acknowledgments . . . . .	298
12.12. References . . . . .	298

---

**Chapter 13. Fabrication of Plant/Biogenic-based Metallic Nanomaterials for Degradation of Micro- and Nano-Plastics . . . . . 301**

Preeti GUPTA and Geeta SINGH

13.1. Introduction . . . . .	301
13.2. Environment and micro- and nano-plastics . . . . .	304
13.3. Role of nanomaterials in micro- and nano-plastics . . . . .	306
13.4. Plant/biogenic metallic nanomaterials . . . . .	307
13.4.1. Characterization technique involved in nanomaterials . . . . .	309
13.4.2. Properties of nanomaterials . . . . .	309
13.5. Degradation of micro- and nano-plastics. . . . .	310
13.6. Conclusion and future prospectives . . . . .	312
13.7. References. . . . .	313

**Chapter 14. Efficiency of Hybrid Materials for Photocatalytic Degradation of Micro- and Nano-Plastics. . . . . 319**

Vaishali GUPTA and Satyendra SINGH

14.1. Introduction . . . . .	320
14.2. Behavior of micro- and nano-plastics. . . . .	323
14.3. Objective of the chapter. . . . .	324
14.4. Global plastic production . . . . .	324
14.5. Photocatalytic degradation . . . . .	325
14.6. Hybrid smart materials for degradation of micro- and nano-plastics . . . . .	327
14.7. Conclusions and suggestions for the future . . . . .	335
14.8. References. . . . .	335

**Chapter 15. Surface Modifications of BiVO<sub>4</sub> Semiconductor Materials for Photocatalytic Degradation of Micro- and Nano-Plastic. . . . . 341**

Nikita YADAV, Vaishali GUPTA and Ojasvi SAINI

15.1. Introduction to micro- and nano-plastic pollution . . . . .	342
15.1.1. Overview of micro- and nano-plastic pollution: a growing environmental concern . . . . .	342
15.1.2. Definition and classification. . . . .	343
15.1.3. Occurrence and distribution of micro- and nano-plastic in environmental matrices. . . . .	348
15.2. Semiconductor photocatalysis in environmental remediation: fundamentals and principles. . . . .	349
15.2.1. Mechanisms of photocatalytic degradation . . . . .	350

15.2.2. Factors influencing photocatalytic efficiency. . . . .	352
15.2.3. Role of semiconductors in environmental clean-up . . . . .	353
15.3. Role of BiVO <sub>4</sub> in photocatalytic degradation of micro- and nano-plastics . . . . .	354
15.3.1. Introduction to BiVO <sub>4</sub> semiconductors . . . . .	354
15.3.2. Significance of BiVO <sub>4</sub> in photocatalysis . . . . .	355
15.3.3. Advantages and limitations of BiVO <sub>4</sub> for this application . . . . .	356
15.4. Surface modifications of BiVO <sub>4</sub> for enhanced catalytic activity . . . . .	358
15.4.1. Overview of surface modification techniques . . . . .	358
15.4.2. Chemical modifications: metal and nonmetal doping and co-catalyst deposition . . . . .	359
15.4.3. Physical modifications . . . . .	360
15.4.4. Hybrid and composite materials . . . . .	361
15.4.5. Advances in surface modification technologies . . . . .	362
15.5. Applications and challenges in real-world scenarios . . . . .	364
15.5.1. Practical applications in micro- and nano-plastic degradation . . . . .	364
15.6. Conclusion . . . . .	366
15.7. References. . . . .	367
<b>List of Authors</b> . . . . .	371
<b>Index</b> . . . . .	375
