Foreword	xi
Yanick RICARD	
Chapter 1. Models of Mantle Dynamics	1
Gaël CHOBLET	
1.1. Toward the first models of the Earth’s mantle	1
1.1.1. Prior to the models	1
1.1.2. Continental drift, thermal convection and plate tectonics.	3
1.2. The physical model: thermal convection.	5
1.2.1. Conservation laws: mass, momentum, energy	6
1.2.2. Constitutive relationships: Fourier, rheology and equation of state	8
1.2.3. Boundary and initial conditions	9
1.2.4. Dimensioning, dimensional analysis and dimensionless numbers	10
1.2.5. From linear stability analysis to turbulent convection ...	12
1.3. “Solving” partial differential equations	16
1.3.1. Spectral methods	17
1.3.2. Finite-difference or finite-volume methods	18
1.3.3. Finite element methods	20
1.3.4. Various aspects of contemporary methods	21

1.4. From a reductionist to a holistic approach.	24
1.4.1. Mixed heating	24
1.4.2. Sphericity	25
1.4.3. Rheology	26
1.4.4. Composition	31
1.4.5. Several phases	32
1.5. Conclusion	34
1.6. References.	37
Chapter 2. How the Earth's Core and Mantle are Separated: Geochemical and Dynamic Constraints	41
Julien MONTEUX and Maud BOYET	
2.1. Introduction	41
2.2. How the Earth's core and mantle are separated: geochemical clues.	44
2.2.1. Internal composition model of the Earth and telluric planets	45
2.2.2. Chemical elements and their properties	46
2.2.3. Meteorites: Building blocks of the Earth	48
2.2.4. Constraints using moderately siderophile elements.	52
2.2.5. Excessive concentration of HSE	53
2.3. Iron/silicate separation in a magma ocean.	54
2.3.1. Fragmentation on impact	55
2.3.2. Fragmentation in the magma ocean.	56
2.3.3. Thermochemical evolution of iron droplets.	58
2.4. Iron/silicate separation by giant diapirism.	61
2.5. Giant impact core assemblies.	64
2.6. Conclusion and outlook for magnetic fields.	66
2.7. References.	68
Chapter 3. Dynamics and Thermal Evolution of the Earth's Early Mantle	75
Julien MONTEUX and Denis ANDRAULT	
3.1. Introduction	75
3.2. Primitive energy sources.	76
3.2.1. Short-lived radioactive elements	77

3.2.2. Impact heating	79
3.2.3. Viscous dissipation related to core formation	81
3.2.4. Giant impacts and the Moon's formation	82
3.3. Melting curves in the deep mantle.	84
3.3.1. Mantle solidus profile: the temperature at which the first magmas formed	85
3.3.2. Melting curves for other silicates in the Earth's mantle . .	87
3.3.3. Eutectic mantle melting diagram: example of the core/mantle boundary	88
3.3.4. Temperature constraints at the core/mantle boundary . . .	91
3.4. The mantle during the magma ocean stage	91
3.4.1. A vigorous convection system.	92
3.4.2. Magma ocean modeling.	93
3.4.3. Adiabatic profiles.	94
3.4.4. Cooling dynamics.	95
3.5. From magma oceans to present-day mantle dynamics	97
3.5.1. Melt fraction rates and viscosity models	98
3.5.2. Cooling dynamics.	101
3.5.3. Magma ocean-solid mantle coupling.	102
3.5.4. Geochemical consequences.	104
3.6. External influences	105
3.6.1. Relationship between the primitive mantle and the core	105
3.6.2. Influence of the primitive atmosphere	106
3.6.3. The Moon's influence	106
3.7. Conclusion	107
3.8. References.	108
Chapter 4. Hotspots, Large Igneous Provinces and Global Mantle Dynamics	115
Cinzia G. FARNETANI	
4.1. Introduction	115
4.2. Active hotspots today.	117
4.3. Geochemistry of hotspot lavas: long-lived and short-lived isotope systems, what do they tell us?	120
4.4. Seismic imaging below hotspots: To which extent do LLSVPs and ULVZs "feed" mantle plumes?	125

4.5. Plumes in the convecting mantle.	127
4.6. Large igneous provinces	130
4.6.1. Phanerozoic continental flood basalts	130
4.6.2. Phanerozoic oceanic plateaus	134
4.6.3. Older LIPs and radiating dyke swarms	136
4.7. Environmental effects of Phanerozoic large igneous provinces	138
4.7.1. Factors triggering global warming and global cooling. . .	140
4.7.2. Oceanic anoxia events: ocean acidification.	141
4.7.3. Ozone depletion from halogen emissions: release of toxic metals	142
4.8. Concluding remarks.	143
4.9. References.	144
Chapter 5. Heat Flow and Secular Cooling of the Mantle . . .	155
Stéphane LABROSSE	
5.1. Introduction	155
5.2. Geophysics of the seafloor and the oceanic heat flow	156
5.2.1. Infinite half-space model	157
5.2.2. Observations: seafloor age and heat flow	158
5.2.3. Seafloor depth	162
5.2.4. Total oceanic heat loss.	164
5.2.5. Link to mantle dynamics	168
5.3. Continental heat flow.	172
5.4. Heat sources and secular evolution	175
5.5. Conclusion	180
5.6. References.	181
Chapter 6. Noble Gases: Geochemical Tracers of Mantle Dynamics	187
Manuel Alexis MOREIRA	
6.1. Introduction	187
6.2. Noble gases in the mantle	188
6.2.1. General information on noble gases	188
6.2.2. Noble gas analysis	194

6.3. The evolution of the mantle–atmosphere system.	209
6.3.1. Outflows: mantle degassing	209
6.4. Past and present dynamics of the Earth’s mantle.	215
6.4.1. A homogeneous asthenosphere through convection and/or efficient melting?	215
6.4.2. Noble gas constraints on magma ocean dynamics	218
6.5. Open questions on the origin and evolution of terrestrial noble gases	220
6.5.1. Helium concentration in island basalts.	221
6.5.2. The origin of terrestrial neon (and of helium and hydrogen)	222
6.5.3. Missing xenon	223
6.6. References.	224
List of Authors	239
