<b>Introduction</b> . . . . .	ix
Ruth SCHEPS and Marie-Christine MAUREL	
<b>Chapter 1. Infinity of God and Space of Men in Painting, Conditions of Possibility for the Scientific Revolution</b> . . . . .	1
Giuseppe LONGO and Sara LONGO	
1.1. A brief introduction to infinity . . . . .	1
1.2. Infinity in painting and the invention of mathematical space. . . . .	2
1.3. Geometrical optics and the subject in projective space . . . . .	8
1.4. The limit of time, calculus and algebra . . . . .	16
1.5. Rational spaces: from trade to physics . . . . .	18
1.6. Setting <i>a priori</i> conditions of representation and knowledge. . . . .	20
1.7. Spaces of possibilities for the evolution of life? . . . . .	23
1.8. Conclusion and opening: heterogeneous spaces of biological evolution . . . . .	25
<b>Chapter 2. Geometry and the Life of Forms</b> . . . . .	29
Ruth SCHEPS	
2.1. Introduction. . . . .	29
2.2. Taking form . . . . .	30
2.2.1. Early geometries . . . . .	30
2.2.2. Geometrizing complexity . . . . .	31
2.2.3. Morphogeneses . . . . .	35
2.3. Art and geometry . . . . .	37
2.3.1. Geometric art before its time . . . . .	37

2.3.2. From geometric abstraction to digital art . . . . .	38
2.3.3. Three legatees of geometric art. . . . .	42
2.4. Beyond geometry . . . . .	46
2.4.1. Quantic and cosmic. . . . .	47
2.4.2. Outline and content. . . . .	49
2.4.3. From form to the sublime . . . . .	50
<b>Chapter 3. Among the Trees: Iterating Geneses of Forms, in Art and Nature</b> . . . . .	53
Giuseppe LONGO and Sara LONGO	
<b>Chapter 4. The Passion of Flight: From Leonardo da Vinci to Jean Letourneur</b> . . . . .	63
Bruno CHANETZ	
4.1. Introduction: from legend to reality . . . . .	63
4.2. Leonardo da Vinci and the basis of the theory of flight . . . . .	64
4.2.1. Chief engineer to Francis I of France . . . . .	64
4.2.2. The flying propeller . . . . .	65
4.2.3. Flapping-wing flight . . . . .	67
4.2.4. Why can't man fly like a bird? . . . . .	68
4.2.5. The basis of Leonardo da Vinci's theory of flight. . . . .	69
4.3. Pioneers of the air and the first fluid movement visualizations . . . . .	70
4.3.1. Clément Ader (1841–1925), a distant successor of Leonardo da Vinci, invents the aeroplane. . . . .	70
4.3.2. The oil king presides over the surge in flight. . . . .	71
4.3.3. From Magnus to Lanchester: the difficult gestation of the theory of flight . . . . .	71
4.3.4. Gustave Eiffel highlights the suction component of lift force. . . . .	72
4.3.5. Étienne-Jules Marey takes the first images of fluid movement . . . . .	72
4.4. From Henri Werlé to Jean Letourneur, the sculptor of fluid movement . . . . .	75
4.4.1. Henri Werlé or “the Master” of ONERA's water tunnel . . . . .	75
4.4.2. Jean Letourneur, interpreter of snapshots. . . . .	77
4.4.3. As the 21st Century dawns, Jean Letourneur gathers momentum . . . . .	79
4.5. Conclusion . . . . .	81
4.6. Appendix: additions to the chapter entitled “Why Can't Man Fly?”, which refers to the article by Marielle Vergès and Kamil Fadel (see footnote 15) . . . . .	81

<b>Chapter 5. Sculptor of Fluid Movement</b> . . . . .	83
Jean LETOURNEUR	
5.1. References . . . . .	101
<b>Chapter 6. Internal Geometry of “Salvator Mundi” (The “Cook Version”, Attributed to Leonardo da Vinci)</b> . . . . .	103
Jean-Pierre CRETTEZ	
6.1. Introduction. . . . .	103
6.2. Distinctive features of the works of Leonardo da Vinci. . . . .	104
6.3. Presentation of the <i>Salvator Mundi</i> , Cook version . . . . .	106
6.4. Investigating the compositional mesh . . . . .	108
6.5. Compositional format. . . . .	112
6.6. Elements of the internal geometry of the <i>Salvator Mundi</i> , Cook version. . . . .	112
6.7. A detailed look at the ellipses of the head of the <i>Salvator Mundi</i> . . . . .	114
6.8. Visual consonance. . . . .	115
6.9. Properties of the type 1 ellipse . . . . .	116
6.10. Other applications of the type 1 ellipse. . . . .	117
6.11. The decoration of two intersecting bands of the stole . . . . .	118
6.12. The internal geometry of the <i>Salvator Mundi</i> (Ganay version). . . . .	123
6.13. Conclusion . . . . .	125
6.14. References. . . . .	126
<b>Chapter 7. Internal Geometry of a Night Scene by Georges de La Tour: “The Apparition of the Angel to St. Joseph”</b> . . . . .	127
Jean-Pierre CRETTEZ	
7.1. Introduction. . . . .	127
7.2. Methodology . . . . .	128
7.3. Distinctive features of the work of Georges de La Tour . . . . .	129
7.4. Internal geometry of <i>The Appearance of the Angel to St. Joseph</i> . . . . .	130
7.5. The search for the compositional mesh . . . . .	132
7.6. Compositional format. . . . .	134
7.6.1. Position of the two protagonists’ heads . . . . .	134
7.7. The compositional architecture . . . . .	135
7.8. The ellipse of light. . . . .	136
7.9. Curved or elliptical forms . . . . .	137
7.10. Internal geometry of the two protagonists’ heads. . . . .	139

7.11. Discussion . . . . .	140
7.12. Compositional construction . . . . .	141
7.13. Conclusion . . . . .	141
7.14. References. . . . .	142
<b>Chapter 8. <i>Emergience</i>, an Art Research Project . . . . .</b>	<b>143</b>
Sophie LAVAUD	
8.1. Background of the project <i>Emergience</i> . . . . .	143
8.1.1. Preamble . . . . .	143
8.1.2. The artistic challenges . . . . .	146
8.1.3. A little bit of art history . . . . .	146
8.2. Description of the <i>Emergience</i> project . . . . .	150
8.2.1. A continually developing research in progress. . . . .	150
8.2.2. What has already been achieved? . . . . .	151
8.2.3. Future developments . . . . .	168
8.3. Let us finish with a conclusion that looks to the future . . . . .	171
8.4. References . . . . .	173
<b>List of Authors . . . . .</b>	<b>175</b>
<b>Index . . . . .</b>	<b>177</b>
