Introduction	xi
María-Carla SALEH and Félix AUGUSTO REY	
Chapter 1. DNA Viruses	1
Lindsey M. COSTANTINI and Blossom DAMANIA	
1.1. Introduction to DNA viruses.	1
1.1.1. What are the most abundant DNA viruses?	2
1.1.2. Human DNA viruses	4
1.2. Taxonomy and structure	6
1.2.1. Small DNA tumor virus, e.g. human papillomavirus	7
1.2.2. Large DNA tumor virus, e.g. Kaposi's sarcoma-associated herpesvirus	7
1.3. Genomes	8
1.3.1. HPV, a small DNA tumor virus genome	9
1.3.2. KSHV, a large DNA tumor virus genome	10
1.4. Gene expression and regulation	10
1.4.1. Small DNA tumor virus gene expression, the HPV example	12
1.4.2. Large DNA tumor virus gene expression, the KSHV example	13
1.4.3. DNA virus inhibition of cellular gene expression	14
1.5. Infectious cycle	15
1.5.1. Small DNA tumor virus life cycle, the HPV example	16
1.5.2. Large DNA tumor virus life cycle, the KSHV example	18

1.6. Viral-induced cellular survival	20
1.6.1. Small DNA tumor virus enhancement of cell survival, e.g. HPV	21
1.6.2. Large DNA tumor virus enhancement of cell survival, e.g. KSHV	21
1.7. Disease prevalence and prevention	22
1.7.1. HPV, a small tumor DNA virus and disease associations	22
1.7.2. KSHV, a large DNA tumor virus and disease associations	24
1.8. Conclusion	25
1.9. References	26
Chapter 2. Double-stranded RNA Viruses	33
Michelle M. ARNOLD, Albie VAN DIJK and Susana LÓPEZ	
2.1. Introduction.	33
2.2. Rotaviruses	37
2.2.1. Virion structure	37
2.2.2. Genome.	38
2.2.3. Virus entry	39
2.2.4. Transcription, replication and genome segment sorting	40
2.2.5. Host cell interactions: protein synthesis.	41
2.2.6. Innate immune evasion	42
2.3. Reoviruses	43
2.3.1. The use of reovirus as an anti-cancer agent.	43
2.3.2. Virion structure	43
2.3.3. Genome.	44
2.3.4. Virus entry	44
2.3.5. Transcription and protein synthesis	45
2.3.6. RNA packaging and virion assembly	46
2.3.7. Innate immune evasion	48
2.4. Orbiviruses	49
2.4.1. Virion structure	51
2.4.2. Genome.	51
2.4.3. Replication cycle	51
2.4.4. Virus entry	52
2.4.5. Transcription, (+)ssRNA selection and packaging, replication	52
2.4.6. Innate immune evasion	54
2.5. Concluding remarks and future challenges to understand dsRNA virus biology.	55
2.6. References	56

Chapter 3. Negative-strand RNA Viruses	69
Rachel FEARNs	
3.1. Introduction.	69
3.2. Replication cycles of negative-strand RNA viruses	70
3.2.1. The order <i>Mononegavirales</i>	70
3.2.2. The order <i>Bunyavirales</i>	73
3.2.3. The order <i>Articulavirales</i>	77
3.2.4. The genus <i>Deltavirus</i>	78
3.2.5. Summary of viral replication cycles	80
3.3. The transcription and replication machinery of the negative-strand RNA viruses	80
3.3.1. Overview of the different negative-strand RNA virus polymerases	80
3.3.2. Orthomyxovirus polymerases and their transcription and replication mechanisms	81
3.3.3. The bunyavirus polymerase.	85
3.3.4. The mononegavirus polymerases and their transcription and replication mechanisms	86
3.3.5. Concluding remarks	90
3.4. References	91
Chapter 4. Viral Epitranscriptomics	105
Rachel NETZBAND and Cara T. PAGER	
4.1. Introduction.	105
4.1.1. What are epitranscriptomic marks?	105
4.1.2. How are epitranscriptomic marks installed?	106
4.2. The tools of RNA modification discovery.	106
4.2.1. Chromatography and mass spectrometry	107
4.2.2. Sequencing methods for PTM detection	109
4.3. RNA modifications deposited by viral enzymes	113
4.3.1. Capping of 5' end of viral RNA by viral methyltransferases	113
4.3.2. 2'O-methylation of viral RNA	114
4.4. Editing of viral RNA by cellular enzymes.	120
4.4.1. Editing of uridine-to-pseudouridine (Ψ)	121
4.4.2. Editing of adenosine-to-inosine	123
4.5. Deposition of RNA modifications on viral RNA by cellular enzymes	129

4.5.1. Role of N6-methyladenosine (m ⁶ A) on viral gene expression	129
4.5.2. Role of 5-methylcytosine (m ⁵ C) in viral gene expression	136
4.5.3. The viral epitranscriptome	139
4.6. Conclusion	140
4.7. References	141
Chapter 5. Defective Viral Particles	159
Carolina B. LÓPEZ	
5.1. Introduction.	159
5.2. Discovery of defective viral genomes and early research.	160
5.3. Classes of defective viral genomes	166
5.3.1. Mutations and frame shifts	168
5.3.2. Deletion DVGs	168
5.3.3. Copy-back and snap-back DVGs.	169
5.3.4. Others.	169
5.4. Impacts on the virus–host interaction	170
5.4.1. Interference with virus replication	170
5.4.2. Stimulation of the immune response.	171
5.4.3. Antivirals and vaccines	173
5.4.4. Establishment of virus persistence	174
5.4.5. Impact on virus spread.	175
5.5. Host factors affecting DVG accumulation and activity	175
5.6. Conclusion	176
5.7. References	176
Chapter 6. Enteric Viruses and the Intestinal Microbiota	197
Matthew PHILLIPS, Bria F. DUNLAP, Megan T. BALDRIDGE and Stephanie M. KARST	
6.1. Introduction.	197
6.2. Enteric picornaviruses	198
6.2.1. Intestinal microbiota enhance poliovirus stability	200
6.2.2. Bacterial glycans facilitate virion attachment to target cells.	200
6.2.3. Intestinal microbiota promote poliovirus recombination.	200
6.3. Mouse mammary tumor virus	201
6.3.1. MMTV binds LPS, which in turn promotes a tolerogenic immune environment conducive to viral persistence	202
6.3.2. MMTV incorporates host LPS-binding proteins into its envelope	202

6.4. Reoviruses	204
6.4.1. Intestinal microbiota enhance reovirus stability	204
6.4.2. Immunostimulatory properties of bacterial flagellin inhibit rotavirus infection	206
6.4.3. Segmented filamentous bacteria have direct and indirect antiviral activity against rotavirus	207
6.4.4. How to reconcile the seemingly contradictory observations of bacterial enhancement and bacterial suppression of rotavirus infection	207
6.5. Noroviruses	208
6.5.1. Intestinal microbiota can promote norovirus infection	209
6.5.2. Intestinal microbiota can trigger antiviral immune responses during norovirus infection	211
6.6. Astroviruses	213
6.6.1. Host interferon responses reduce astrovirus replication and infection	214
6.6.2. Dysbiosis can occur after AstV infection	214
6.6.3. <i>In vivo</i> and <i>in vitro</i> culture systems for AstV pathogenesis studies	215
6.7. Overall conclusion	216
6.8. References	217

Chapter 7. Plant–Virus–Vector Interactions 227

Swapna Priya RAJARAPU, Diane E. ULLMAN, Marilyne UZEST,
Dorith ROTENBERG, Norma A. ORDAZ and Anna E. WHITFIELD

7.1. Introduction	227
7.2. Non-circulative virus transmission	228
7.2.1. Vectors of non-circulative viruses	230
7.2.2. Virus–vector interactions are highly specific	231
7.2.3. Capsid strategy	232
7.2.4. Helper strategy	232
7.3. Circulative virus transmission	234
7.3.1. Vectors of circulative viruses	234
7.4. Receptors in vectors of non-circulative viruses	235
7.4.1. Receptors in aphid stylets	236
7.4.2. Receptors in vector foreguts	237
7.5. Receptors in vectors of circulative viruses	237
7.5.1. Circulative virus binding and transcytosis	237
7.5.2. Circulative virus receptors	238
7.6. Circulative, propagative virus binding and entry	239
7.6.1. Circulative, propagative viruses binding and entry	239

7.6.2. Receptors in vectors of circulative, propagative viruses	241
7.6.3. Vertical transmission of propagative, circulative viruses	242
7.7. Virus transmission morphs for non-circulative viruses	243
7.8. “Omics” tools for studying virus–arthropod interactions	243
7.9. Vector innate immunity in response to viruses	247
7.10. Host and vector manipulation by plant viruses	250
7.10.1. Indirect (plant-mediated) manipulation of insect vectors by plant viruses	250
7.10.2. Direct manipulation of insect vectors by plant viruses	260
7.10.3. Mode of transmission and virus manipulation of plant hosts leading to enhanced vector transmission	262
7.11. Summary points	263
7.12. Acknowledgments	264
7.13. References.	265
Chapter 8. Evolution and Origin of Human Viruses	289
Rachele CAGLIANI, Alessandra MOZZI, Chiara PONTREMOLI, Manuela SIRONI	
8.1. Introduction.	289
8.2. Origin and ancient evolutionary history of human viruses	290
8.2.1. Origin and ancient evolutionary history of human-infecting RNA viruses.	290
8.2.2. Origin and ancient evolutionary history of human-infecting reverse-transcribing viruses.	295
8.2.3. Origin and ancient evolutionary history of human-infecting DNA viruses	298
8.3. Sources of viral genetic diversity	303
8.4. Viral evolution and host range.	307
8.5. Recent evolution of human RNA viruses – selected examples.	313
8.6. Conclusion	319
8.7. References	320
List of Authors	341
Index	345
