<b>Preface</b> . . . . .	ix
<b>Chapter 1. What is Atmospheric Pollution?</b> . . . . .	1
1.1. Introducing atmospheric pollution . . . . .	1
1.1.1. The concept of polluted atmosphere . . . . .	1
1.1.2. Where are the large polluted areas? . . . . .	3
1.1.3. Atmospheric composition . . . . .	4
1.2. Typical concentrations by season . . . . .	7
1.3. Gas-phase chemistry . . . . .	8
1.3.1. Abundance and lifetime of species . . . . .	8
1.3.2. Ozone and the radical cycle . . . . .	10
1.3.3. Chemical regimes . . . . .	10
1.3.4. Typology of urban pollution . . . . .	11
1.4. Aerosol chemistry . . . . .	12
1.4.1. Abundance of aerosols . . . . .	13
1.4.2. Size distribution . . . . .	13
1.5. The atmospheric boundary layer . . . . .	14
1.5.1. General structure . . . . .	15
1.5.2. Diurnal cycle and turbulence . . . . .	16
1.5.3. The urban boundary layer . . . . .	18
<b>Chapter 2. Observations and Legislation</b> . . . . .	23
2.1. Meteorological measurements . . . . .	24
2.1.1. In situ measurements . . . . .	24
2.1.2. Measurements through remote detection . . . . .	26
2.2. Atmospheric concentration measurements . . . . .	29

---

2.2.1. In situ measurements . . . . .	29
2.2.2. Measurements through remote detection . . . . .	32
2.2.3. Micro-sensors . . . . .	35
2.3. Measurement campaigns . . . . .	36
2.4. Databases . . . . .	38
2.5. Norms and legislations . . . . .	38
<b>Chapter 3. General Principle Behind Modeling and Its Application to Meteorology . . . . .</b>	<b>43</b>
3.1. What is a model? . . . . .	43
3.1.1. Definition of a numerical model . . . . .	43
3.1.2. Journals on modeling . . . . .	45
3.1.3. Different types of Eulerian models . . . . .	45
3.1.4. A few current meteorological models . . . . .	46
3.2. Constraints on a regional model . . . . .	47
3.2.1. Definition of the domain of calculation . . . . .	47
3.2.2. Initial conditions and boundary conditions . . . . .	51
3.2.3. Surface data . . . . .	52
3.2.4. Nudging and nesting . . . . .	54
3.3. Dynamical, physical and parameterizations . . . . .	55
3.3.1. Choosing the timestep . . . . .	56
3.3.2. Diagnostic and prognostic variables . . . . .	56
3.3.3. The boundary layer and turbulent fluxes . . . . .	57
<b>Chapter 4. Emissions . . . . .</b>	<b>63</b>
4.1. Introduction . . . . .	63
4.2. Anthropogenic emissions . . . . .	65
4.2.1. Emission inventories . . . . .	65
4.2.2. Emission cadastres . . . . .	67
4.3. Biogenic emissions . . . . .	71
4.3.1. Flux parameterization . . . . .	73
4.3.2. Databases . . . . .	73
4.3.3. Intercomparison and sensitivity . . . . .	75
4.4. Emissions from biomass burning . . . . .	76
4.4.1. Surface emission processes . . . . .	77
4.4.2. Pyroconvection . . . . .	78
4.5. Mineral dust emissions . . . . .	80
4.5.1. Characterization of the surface, the soil and roughness . . . . .	81
4.5.2. Taking meteorology into account . . . . .	83
4.5.3. Calculating emission fluxes . . . . .	85
4.5.4. Examples of emission fluxes . . . . .	87
4.6. Emissions from volcanoes . . . . .	89
4.6.1. General information . . . . .	89

---

4.6.2. A recent eruption: the Icelandic volcano in 2010 . . . . .	90
4.6.3. An older eruption: Laki in 1783 . . . . .	92
4.7. Emissions from lightning . . . . .	92
4.7.1. Frequency of lightning flashes . . . . .	94
4.7.2. Estimation of NO production . . . . .	97
4.7.3. The relative part produced by CG and IC . . . . .	98
4.7.4. The vertical emission profile . . . . .	99
4.7.5. Intercomparisons and observations . . . . .	99
4.8. Natural marine emissions . . . . .	101
4.8.1. Sea-salts . . . . .	101
4.8.2. Dimethylsulfide . . . . .	102
4.9. Pollen . . . . .	103
4.10. Summarizing information on emissions . . . . .	107
<b>Chapter 5. Deposition . . . . .</b>	<b>109</b>
5.1. Dry deposition . . . . .	109
5.1.1. Aerodynamic resistance $r_a$ . . . . .	111
5.1.2. Surface resistance $r_b$ . . . . .	112
5.1.3. In-canopy resistance $r_c$ . . . . .	114
5.2. Wet deposition . . . . .	115
5.2.1. In convective columns . . . . .	116
5.2.2. In the cloud . . . . .	117
5.2.3. Below the cloud . . . . .	117
<b>Chapter 6. Chemistry-Transport Modeling . . . . .</b>	<b>121</b>
6.1. Principles underlying chemistry-transport models . . . . .	121
6.2. Initial conditions and boundary conditions . . . . .	125
6.3. Taking into account transport . . . . .	128
6.3.1. Conservation of mass . . . . .	128
6.3.2. The horizontal advection flux (u,v) . . . . .	129
6.3.3. The vertical advection flux (w) . . . . .	131
6.3.4. Turbulent diffusivity . . . . .	131
6.4. Gas-phase chemistry . . . . .	132
6.4.1. Chemical reactions . . . . .	133
6.4.2. Solvers . . . . .	134
6.4.3. Chemical mechanisms . . . . .	135
6.5. Aerosols . . . . .	136
6.5.1. Size distribution . . . . .	137
6.5.2. Internal/external mixing . . . . .	137
6.5.3. Aerosol models . . . . .	138
6.6. Coupling meteorology and chemistry . . . . .	142
6.6.1. Coupled models . . . . .	142
6.6.2. Direct effects . . . . .	144

---

6.6.3. Indirect effects . . . . .	145
6.6.4. Uncertainties and future prospects . . . . .	146
<b>Chapter 7. Qualification and Optimization . . . . .</b>	<b>149</b>
7.1. Qualification of modeling results . . . . .	149
7.1.1. Is it possible to qualify or validate a model? . . . . .	149
7.1.2. Are the results accurate? . . . . .	149
7.1.3. Evaluation statistics . . . . .	150
7.2. Comparisons with measurements or inter-model comparisons . . . . .	153
7.2.1. Comparisons with routine measurements . . . . .	153
7.2.2. Comparison with satellite measurements . . . . .	154
7.2.3. Comparisons with measurement campaigns . . . . .	154
7.2.4. Inter-model comparisons . . . . .	156
7.3. Statistical adaptation or tuning . . . . .	159
7.3.1. Modifications to input parameters . . . . .	159
7.3.2. Modification of results . . . . .	160
7.4. Scenarios . . . . .	160
7.4.1. Meteorological scenarios . . . . .	160
7.4.2. Emission scenarios . . . . .	160
7.4.3. Scenarios related to a process in the model . . . . .	162
7.5. Sensitivity studies . . . . .	162
7.5.1. Sensitivity through direct modeling . . . . .	164
7.5.2. Sensitivity through adjoint modeling . . . . .	164
7.6. Ensemble calculations . . . . .	167
7.7. Machine learning . . . . .	171
<b>Chapter 8. Data Assimilation, Inverse Modeling and Forecasting . . . . .</b>	<b>173</b>
8.1. Data assimilation . . . . .	173
8.1.1. Sequential assimilation . . . . .	175
8.1.2. Variational assimilation . . . . .	176
8.1.3. Applications of data assimilation . . . . .	177
8.1.4. Gain from data assimilation for pollution . . . . .	178
8.2. Inverse modeling . . . . .	179
8.3. Forecasting . . . . .	182
<b>Chapter 9. The Impacts of Atmospheric Pollution . . . . .</b>	<b>185</b>
9.1. The impact of pollution on climate . . . . .	185
9.2. The impact of climate on pollution . . . . .	187
9.3. The impact of pollution on health . . . . .	188
