# Contents

**Preface** . . . . . ix

**Introduction** . . . . . xi

**Part 1. Theory** . . . . . 1

**Chapter 1. Kinetic Theory** . . . . . 3

1.1. The impossibility of an accurate approach . . . . . 4
1.2. Boltzmann equation . . . . . 8
1.3. Collision term . . . . . 11
1.3.1. Absence of collisions: Vlasov equation . . . . . 11
1.3.2. Bhatnagar–Gross–Krook relaxation model . . . . . 12
1.3.3. Boltzmann collision integral . . . . . 13
1.3.4. Fokker–Planck collision term . . . . . 16
1.4. Steady state: Boltzmann distribution . . . . . 18
1.5. Maxwell–Boltzmann distribution: properties . . . . . 24
1.6. H-theorem . . . . . 32
1.7. Paradoxes related to H-theorem . . . . . 35
1.7.1. Loschmidt's paradox of irreversibility . . . . . 35
1.7.2. Zermelo paradox . . . . . 36

**Chapter 2. Hydrodynamic Approach** . . . . . 37

2.1. Fluid model: a heuristic approach . . . . . 38
2.2. Macroscopic transport equation . . . . . 39
2.3. Fluid model . . . . . 41
2.4. Pressure tensor . . . . . 44
2.4.1. Isotropic pressure . . . . . 45

2.4.2. Anisotropic pressure . . . . . 45
2.5. A deadlock in the fluid model: closure relationships . . . . . 46
2.5.1. Zero pressure . . . . . 46
2.5.2. Isothermal pressure . . . . . 47
2.6. The collision effect . . . . . 48

**Chapter 3. Quantum Models** . . . . . 51

3.1. Physical interest . . . . . 52
3.2. Quantum hydrodynamic model . . . . . 54
3.3. Quantum kinetic approach: Wigner–Moyal theory . . . . . 58
3.3.1. Wigner distribution . . . . . 58
3.3.2. Weyl transformation . . . . . 62
3.3.3. Evolution of the Wigner distribution . . . . . 64

**Chapter 4. General Relativity** . . . . . 67

4.1. Relativistic hydrodynamics . . . . . 68
4.1.1. Conservation equations . . . . . 68
4.1.2. Hydrodynamics in special relativity . . . . . 69
4.1.3. Hydrodynamic model in general relativity . . . . . 71
4.2. Relativistic kinetic theory . . . . . 72
4.2.1. Basic concepts . . . . . 72
4.2.2. Formulation of kinetic theory . . . . . 75
4.2.3. Collision integral . . . . . 77
4.2.4. Boltzmann equation in general relativity . . . . . 79
4.2.5. H-theorem . . . . . 81
4.2.6. Equilibrium state: Jüttner distribution . . . . . 82

**Part 2. Applications** . . . . . 87

**Chapter 5. Plasmas** . . . . . 89

5.1. Electronic oscillations in classical plasmas: a hydrodynamic approach . . . . . 91
5.2. Ion waves: hydrodynamic approach . . . . . 95
5.3. Classic plasmas: kinetic approach . . . . . 97
5.4. Quantification of electronic oscillations: hydrodynamic and kinetic approaches . . . . . 103
5.5. In a relativistic plasma: kinetic approach . . . . . 105
5.6. Beyond the linear approach: the Korteweg–De Vries equation . . . . . 110

**Chapter 6. Gravitational Systems** . . . . . 115

6.1. Jeans instability: hydrodynamic approach . . . . . 116
6.2. Kinetic approach and collision effect . . . . . 120
6.3. Jeans instability in the presence of dark matter . . . . . 123
6.3.1. Kinetic approach . . . . . 124
6.3.2. Hydrodynamic approach . . . . . 128
6.4. Jeans instability: alternative theories . . . . . 130

**Chapter 7. Bose-Einstein Condensates** . . . . . 135

7.1. Quantum hydrodynamic representation . . . . . 137
7.2. Quantum kinetic representation . . . . . 139
7.3. Kinetic approach to Bogoliubov oscillations . . . . . 141

**Chapter 8. Cosmology and Dark Matter Models** . . . . . 145

8.1. Hydrodynamics of the Universe . . . . . 145
8.1.1. Perturbation in a static Universe . . . . . 149
8.1.2. Perturbations in an expanding Universe . . . . . 151
8.2. Dark matter models . . . . . 153
8.2.1. Hydrodynamic representation . . . . . 155
8.2.2. Kinetic representation . . . . . 157

**Appendix. Language of Relativity** . . . . . 159

**References** . . . . . 165

**Index** . . . . . 169
