Introduction	xi
Chapter 1. A Look at “Performance” Buildings: An Interdisciplinary Survey of Professionals	1
1.1. Stakeholders for understanding the challenges of energy, the climate and the environment	1
1.1.1. The virtues of active building professionals entering into participation	1
1.1.2. Context and interrelationships around energy-related challenges: the positioning of building professionals.	6
1.1.3. Common themes and the questions of the survey	12
1.2. The survey of building professionals in France.	14
1.2.1. A nation-wide exploratory survey	15
1.2.2. Complementary investigation methods	16
1.2.3. The analysis: “a radical interdisciplinarity” to question professionnal dynamics in construction and energy	20
1.2.4. Cross-connections with research on professionals from the territories	24
Chapter 2. Uneasiness Among Professionals: Multiple Obstacles	29
2.1. A host of constraints	30
2.1.1. Heterogeneity and the lack of training and skills	31
2.1.2. Multiplication of constraints, economic crises and marketing hype	32

2.2. Prometheus syndrome: The belief in new techniques as a silver bullet.	33
2.2.1. The belief in and overreliance on techniques.	33
2.2.2. Historical amnesia: The lack of a diachronic perspective and knowledge about the history of technology, construction and architecture.	36
2.2.3. The inhabitant as disembodied end user	37
2.3. The “Exquisite Corpse” syndrome: segmentation and the challenges and actors.	39
2.3.1. The segmentation of the energy issue	39
2.3.2. The lack of communication and the “blame game” played between actors	41
2.4. From experimentation to standardization... and its adverse effects . . .	44
2.4.1. Issues and setbacks in the transition to standardization.	45
2.4.2. The adverse effects of standardization	48
2.4.3. A sort of modernism making a comeback ?	51
2.5. Multi-criteria testing: The “trajectory” of problems and solutions.	51
2.5.1. The replication of counterproductive decisions	52
2.5.2. “Ostrich syndrome” and “path dependence”.	53
2.5.3. The concept of trajectory: “divergence” phenomena and its effects	57
2.6. From a crisis of obstacles, to the devices and the resources needed for a transition	59
Chapter 3. The Characteristics of the Pioneers: Trajectories, Construction, and the Advancement of Their Skills	61
3.1. Adherence to ecological values and the broad array of systems for engagement	61
3.1.1. Environmental sensitivity	61
3.1.2. Wearing many hats: the commitment to a multilateral approach . .	63
3.1.3. Personal experimentation as a driving force for innovation	65
3.1.4. Atypical profiles and career paths, and significant professional mobility	67
3.1.5. The role of reading, the Internet and documentaries	71
3.2. Construction, distribution and adaptation of knowledge, expertise and skills	76
3.2.1. Different countries, regions, and inspiring projects	76
3.2.2. Geographic mobility: movement and transformation of models	78
3.2.3. The role of associations and networks.	88
3.2.4. The role of women and the issue of feminization	92

Appendix. Selection of First-Hand Accounts from Building Area Participants	97
1. Alain Bornarel	103
2. Alexandre da Silva.	119
3. Frank Dimitropoulos	131
4. Michaël Fournier.	139
5. Jean-Marc Gary	149
6. Françoise-Hélène Jourda	167
7. Milena Karanesheva and Mischa Witzmann	185
8. Yves Lion	199
9. Bertrand Montarou.	211
10. Marine Morain	227
11. Vincent Pierré.	247
12. Laurent Vacher-Bruel	259
13. Jean-Luc Vallade	267
14. Delphine Saint-Quentin	277
15. Marika Frenette.	289
Conclusion	301
