<b>Introduction</b> . . . . .	xiii
Violaine NICOLAS	
<b>Chapter 1. Scientific Exploration Campaigns to Inventory Existing Biodiversity and Hasten the Discovery of New Species</b> . . . . .	1
Line LE GALL	
1.1. Introduction. . . . .	1
1.2. A historical overview of diversity inventory . . . . .	2
1.3. The advent of molecular taxonomy. . . . .	3
1.4. Biodiversity: the emergence of a concept in the face of the crisis. . . . .	4
1.5. An incomplete inventory of diversity . . . . .	5
1.6. The place of scientific exploration campaigns, run by the French Natural History Museum, in the inventory of biodiversity . . . . .	6
1.7. Innovations to speed up the description of species. . . . .	7
1.8. Challenges and issues surrounding scientific exploration campaigns . . . . .	8
1.9. Conclusion . . . . .	9
1.10. References. . . . .	9
<b>Chapter 2. Half a Century of Naturalist Exploration of Upper Bathyal Benthic Environments: Ruptures and Continuities</b> . . . . .	11
Sarah SAMADI and Sophie BARY	
2.1. The deep ocean: we have barely begun to plumb the depths . . . . .	11
2.2. The Tropical Deep-Sea Benthos program . . . . .	12

---

2.2.1. From MUSORSTOM to Tropical Deep-Sea Benthos . . . . .	12
2.2.2. TDSB campaigns across time and space . . . . .	13
2.2.3. Program metrics. . . . .	19
2.3. Continuity and ruptures in the TDSB program . . . . .	19
2.3.1. The place of “living fossils” in discourse on the deep oceans . . . . .	19
2.3.2. A program evolving with societal issues . . . . .	21
2.4. Campaigns at sea with taxonomic results: a network dynamic around naturalist collections . . . . .	22
2.5. References . . . . .	23
<b>Chapter 3. CEAMARC: An Integrated Campaign to Evaluate Biodiversity at All Scales in Adélie Land . . . . .</b>	<b>27</b>
Marc ELÉAUME, Nadia AMÉZIANE, Frédéric BUSSON, Romain CAUSSE, Agnès DETTAÏ, Guillaume LECOINTRE and Catherine OZOUF-COSTAZ	
3.1. Introduction. . . . .	27
3.2. The CEAMARC expedition (Collaborative East-Antarctic Marine Census) . . . . .	29
3.2.1. An “integrated” campaign. . . . .	29
3.2.2. Sampling methods . . . . .	31
3.3. Some results . . . . .	34
3.4. Conclusion . . . . .	36
3.5. References . . . . .	37
<b>Chapter 4. Objectif Plancton: A Citizen Science Program to Study Plankton Diversity . . . . .</b>	<b>41</b>
Cyril GALLUT, Céline LIRET, Marine LE MOAL, Philippe PONDAVEN, Cécile BANOVSKI-KLEIN, Mathilde CADIER, Antoine CHARPENTIER, Klervi FUSTEC, Julianne LE GUEN, Molène LE ROY, Joëlle PICHON, Martin PLUS, Laura SCHWEIBOLD, Marc SOURISSEAU and Nalani K. SCHNELL	
4.1. A citizen science project . . . . .	41
4.2. Scientific objectives. . . . .	43
4.3. Materials and methodology . . . . .	45
4.4. Avenues of research. . . . .	49
4.4.1. Ichthyoplankton. . . . .	49
4.4.2. Phytoplankton . . . . .	51
4.4.3. Human and social sciences . . . . .	53
4.5. Conclusion . . . . .	55
4.6. References . . . . .	56

<b>Chapter 5. Environmental DNA for Observing Marine Mammals in the Marine Protected Areas of Iroise and the Antilles</b> . . . . .	59
Jean-Luc JUNG	
5.1. Introduction. . . . .	59
5.2. Studying cetaceans in order to know them better: from visual observation to DNA analysis. . . . .	61
5.3. Progress in approaches using environmental DNA (eDNA) and metabarcoding. . . . .	62
5.4. Detection of marine mammals by eDNA analysis . . . . .	63
5.5. First campaign in the Iroise Sea, 2019–2020 . . . . .	64
5.6. The An Bad’lo campaign in Martinique . . . . .	66
5.7. Detection of marine mammals and other mobile marine fauna through the study of eDNA: from naturalist inventories to the support of public policies . . . . .	68
5.8. References . . . . .	69
<b>Chapter 6. DNA Barcoding for Identifying Species and Monitoring French Biodiversity</b> . . . . .	73
Rodolphe ROUGERIE, Lucas SIRE and Antoine LÉVÊQUE	
6.1. Introduction. . . . .	73
6.2. DNA barcoding for species identification . . . . .	75
6.2.1. A simple and standardized tool for molecular identification . . . . .	75
6.2.2. From the specimen to the community: identification by DNA barcoding and metabarcoding. . . . .	76
6.2.3. DNA barcodes of the living world: a collective and international effort . . . . .	79
6.3. DNA barcode libraries for biodiversity in Metropolitan France and overseas territories . . . . .	81
6.4. Main challenges for the molecular identification of species in France . . . . .	84
6.4.1. Development of exhaustive and accessible reference libraries . . . . .	84
6.4.2. Molecular identification of species: an asset for monitoring French terrestrial biodiversity . . . . .	86
6.5. Conclusion and perspectives. . . . .	88
6.6. References . . . . .	88

<b>Chapter 7. Exploring the Molecular Biodiversity of Specimens in Collections: The Case of Coccinellidae</b> . . . . .	95
Karen SALAZAR, Romain NATTIER and Guillaume ACHAZ	
7.1. Introduction. . . . .	95
7.2. DNA sequencing of collection specimens . . . . .	96
7.3. Methodology for DNA sequencing of collection specimens . . . . .	97
7.3.1. Extraction of DNA from collection specimens . . . . .	97
7.3.2. Difficulties in the molecular use of collection specimens . . . . .	97
7.3.3. Next-Generation Sequencing (NGS) technologies used in museomics . . . . .	98
7.4. Recent results from museomic studies on insects . . . . .	99
7.5. Context of the study on biodiversity and systematics of Coccinellidae. . . . .	106
7.5.1. Applications of museomics for exploring the biodiversity of Coccinellidae. . . . .	107
7.5.2. Barriers to the exploration of Coccinellidae biodiversity . . . . .	109
7.6. Conclusion . . . . .	112
7.7. References . . . . .	112
<b>Chapter 8. New Tools and New Discoveries in Paleo-entomology: Looking to Future Challenges</b> . . . . .	123
André NEL, Patricia NEL, Jean-Paul KUNDURA, Romain GARROUSTE, Valérie NGÔ-MULLER, Mathieu BODERAU, Thomas SCHUBNEL and Corentin JOUAULT	
8.1. Insects as essential players in past and present ecosystems. . . . .	123
8.2. Discovering the past to understand the present (and perhaps predict the future). . . . .	125
8.2.1. A science which, until recently, had been largely overlooked . . . . .	126
8.2.2. Spectacular recent progress in data analysis . . . . .	127
8.3. Modern information-capture tools . . . . .	128
8.3.1. Bibliography: “I had a dream” . . . . .	128
8.3.2. The field . . . . .	129
8.3.3. Fossil preparation. . . . .	129
8.3.4. Information capture from fossils . . . . .	130
8.4. More “exotic” approaches . . . . .	131
8.4.1. Fossil trophic interactions . . . . .	131
8.4.2. DNA and organic chemistry . . . . .	132
8.5. Conclusion . . . . .	132
8.6. References . . . . .	133

<b>Chapter 9. X-ray Tomography of Crinoids: Morphological Diversity and Evolution Seen under a Different Light</b> . . . . .	139
Pablo MARTINEZ-SOARES, Nadia AMÉZIANE, Marta BELLATO, Julien BIGOT, Margot MATHIEU, Michel ROUX, Patricia WILLS and Marc ELÉAUME	
9.1. X-ray microtomography . . . . .	139
9.2. The sample . . . . .	141
9.3. Software. . . . .	141
9.4. X-ray study of crinoids . . . . .	142
9.4.1. Presentation and current issue with crinoids . . . . .	142
9.4.2. From radiography to CT scans . . . . .	143
9.4.3. Crinoids and CT scanning at the MNHN: various ongoing projects . . . . .	143
9.5. Conclusion . . . . .	150
9.6. References . . . . .	150
<b>Chapter 10. Conceptual and Methodological Foundations of Integrative Taxonomy</b> . . . . .	153
Aurélien MIRALLES and Nicolas PULLANDRE	
10.1. Introduction . . . . .	153
10.2. A multifaceted discipline . . . . .	154
10.2.1. Defining taxonomy . . . . .	154
10.2.2. The two tasks of contemporary $\alpha$ taxonomy . . . . .	156
10.3. A brief history of the taxonomic paradigm, from Linnaeus to the modern world . . . . .	158
10.3.1. Origins . . . . .	158
10.3.2. Evolution(s) . . . . .	158
10.3.3. Renaissance . . . . .	160
10.4. Taxonomy of tomorrow: issues and prospects . . . . .	163
10.5. References. . . . .	165
<b>Chapter 11. <i>Thiomargarita magnifica</i>: A Giant from Marine Mangroves, Pushing the Limits of Bacteriology</b> . . . . .	171
Olivier GROS, Silvina GONZALEZ-RIZZO, Nathalie ELISABETH and Jean-Marie VOLLAND	
11.1. Introduction . . . . .	171
11.1.1. A diverse bacterial world . . . . .	171
11.1.2. A microbial world is not always microscopic . . . . .	172
11.1.3. Physiological limitations linked to gigantism in bacteria . . . . .	172
11.2. <i>Thiomargarita magnifica</i> . . . . .	174
11.2.1. A giant bacterium . . . . .	175

---

11.2.2. A bacterium with an exceptional genome . . . . .	175
11.2.3. A bacterium with high cellular complexity . . . . .	176
11.2.4. A giant colonizing the sediments in mangrove swamps in Guadeloupe . . . . .	176
11.3. Conclusion . . . . .	179
11.4. References. . . . .	180
<b>Chapter 12. New Species of Freshwater Fish in France: Reasons and Impacts for Management . . . . .</b>	<b>183</b>
Gaël DENYS, Agnès DETTAÏ, Henri PERSAT, Nicolas POULET and Philippe KEITH	
12.1. Introduction . . . . .	183
12.2. Reasons for these changes . . . . .	187
12.2.1. Taking account of biogeographical context. . . . .	187
12.2.2. The concept of a species and the approach of integrative taxonomy . . . . .	192
12.3. Impacts on management . . . . .	193
12.4. Conclusion . . . . .	195
12.5. References. . . . .	196
<b>Chapter 13. Effects of Sampling Bias in Estimating Phylodiversity in the Southern Ocean . . . . .</b>	<b>201</b>
Anna KONDRATYEVA	
13.1. Why study the Southern Ocean and its biodiversity? . . . . .	201
13.2. Knowledge of marine biodiversity in the Southern Ocean . . . . .	202
13.3. Sampling bias in data on Antarctic marine biodiversity . . . . .	203
13.4. Biodiversity measurements for the Southern Ocean . . . . .	204
13.5. Effects of sampling bias on the calculation of phylodiversity indices . . . . .	206
13.5.1. Taxonomic shortfall and phylodiversity. . . . .	206
13.5.2. Evolutionary shortfall and phylodiversity. . . . .	207
13.5.3. Spatial shortfall and phylodiversity . . . . .	209
13.6. Conclusion . . . . .	211
13.7. References. . . . .	212
<b>Chapter 14. Standardization, Accessibility of Research Data and Open Science . . . . .</b>	<b>217</b>
Visotheary UNG	
14.1. Why talk about standards, open data and open science?. . . . .	217
14.1.1. Issues . . . . .	218
14.1.2. French national context. . . . .	219

---

14.1.3. International context . . . . .	220
14.2. How can we ensure FAIR data in practice? . . . . .	221
14.2.1. Draw inspiration from what exists already . . . . .	221
14.2.2. Implementing standards . . . . .	222
14.2.3. Biodiversity Informatics . . . . .	223
14.3. Where can research data be stored? Data warehouses and data papers . . . . .	227
14.4. Conclusion . . . . .	229
14.4.1. From the need to shift the sociocultural paradigm... . . . . .	229
14.4.2. ...to more ethical research. . . . .	230
14.5. References. . . . .	231
<b>List of Authors</b> . . . . .	237
<b>Index</b> . . . . .	243
