Preface	xi
Hannelore DERLUYN and Marc PRAT	
Introduction	xv
Marc PRAT	
Part 1. Fundamental Aspects	1
Chapter 1. Thermodynamics and Salt Crystallization	
Kinetics	3
Lionel MERCURY	
1.1. Introduction.	3
1.2. Thermodynamic driving force.	4
1.2.1. Equilibrium, spontaneity, irreversibility.	4
1.2.2. Parameters controlling the driving force	5
1.2.3. Expression of the driving force.	15
1.3. Stability, metastability, and instability	17
1.4. Kinetics of phase transformations.	19
1.4.1. Characteristic equation.	20
1.4.2. Chemistry-transport coupling.	21
1.5. Conclusion	22
1.6. References	22

Chapter 2. Crystallization Pressure	25
Noushine SHAHIDZADEH	
2.1. Introduction.	25
2.2. Crystallization pressure.	27
2.3. Direct measurement of the stress generated during crystallization in confinement.	30
2.4. Relationship between crystallization pressure and disjoining pressure	38
2.5. Concentration in the thin films trapped between the crystal and the wall at the end of evaporation.	39
2.6. Conclusion	41
2.7. Acknowledgments.	41
2.8. References	42
Chapter 3. Evaporation, Transport, and Crystallization	45
Marc PRAT	
3.1. Introduction.	45
3.2. Evaporation in porous media	46
3.2.1. Two typical situations	46
3.2.2. Kinematics	50
3.3. Transport of ions.	50
3.4. Supersaturation.	53
3.5. Subflorescence and efflorescence.	54
3.6. Branching efflorescence versus compact efflorescence (crust)	55
3.7. Efflorescence entrenchment	56
3.8. Factors affecting surface efflorescence distribution	57
3.9. Efflorescence dynamics	59
3.10. Impact of efflorescence on drying kinetics.	60
3.11. Patterned crusts.	64
3.12. Evaporation and formation of subflorescence.	65
3.13. Models	65
3.14. Other salts.	68
3.15. Conclusion	68
3.16. References.	69

Chapter 4. Poromechanics and Confined Crystallization in Porous Media	75
Patrick DANGLA	
4.1. Introduction.	75
4.2. Chemical potential of the crystal under anisotropic stress	77
4.3. Crystallization pressure and growth kinetics	78
4.4. Crystallization thermodynamics in confined media	82
4.5. State equations for poroelasticity and degrees of saturation	84
4.6. Identification of poroelastic properties.	89
4.7. Water retention curve and distribution of salt crystals.	91
4.7.1. Thermodynamic equilibrium for the crystal–solution interface	92
4.7.2. Thermodynamic out-of-equilibrium for the crystal–solution Interface	93
4.8. Conclusion	94
4.9. References	95
Chapter 5. Experimental Observations on Salt Crystallization in Geomaterials.	99
Hannelore DERLUYN	
5.1. Introduction.	99
5.2. X-ray and neutron imaging.	100
5.2.1. Interaction of X-rays and neutrons with matter	100
5.2.2. Imaging of geomaterials and dynamic processes	102
5.3. Saline water evaporation and crystallization-induced deformations studied with high-resolution neutron radiography	105
5.3.1. Experimental procedure and image analysis	105
5.3.2. Drying-induced salt crystallization in porous limestone	108
5.4. Salt crystallization dynamics in sandstone studied with 4D laboratory X-ray micro-tomography	117
5.4.1. Experimental procedure and image analysis	117
5.4.2. Drying-crystallization kinetics	118
5.5. Conclusion	120
5.6. Acknowledgments.	121
5.7. References	122

Part 2. Illustrations 127**Chapter 6. Large-Scale Mineral Precipitation and Its Effects on Infrastructures** 129

Anna RAMON-TARRAGONA and Eduardo E. ALONSO

6.1. Introduction.	129
6.2. Damaging effects of expansions in sulfated rocks and soils	130
6.3. Extreme expansive phenomena in the Lilla tunnel.	133
6.3.1. Geology, design and construction	133
6.3.2. Expansive phenomena and ground properties	135
6.3.3. Tunnel reinforcement and reconstruction	138
6.4. Heave of the Pont de Candí Viaduct	140
6.4.1. Performance of the viaduct and geology	140
6.4.2. Field investigation	142
6.4.3. Remedial measures	147
6.4.4. Reaction of a pile group against deep expansion	147
6.5. Swelling mechanisms in sulfated rocks	148
6.5.1. Current interpretation.	148
6.5.2. Crystallization pressures in anhydritic rocks	151
6.5.3. Scenarios of expansion and heave in anhydritic rocks	152
6.6. Thermo-hydro-mechanical and chemical coupled modeling of crystal precipitation and rock deformation against infrastructures	152
6.6.1. Model formulation	153
6.6.2. Expansion calculation: comparison with field observations	155
6.6.3. Sensitivity analysis	157
6.7. Concluding remarks.	157
6.8. Acknowledgments.	158
6.9. References	159

Chapter 7. Salts in Heritage Sites 163

Julie DESARNAUD

7.1. Introduction.	163
7.2. Salt–Water interaction	164
7.2.1. Crystallization	164
7.2.2. Dissolution	166
7.2.3. Hygroscopicity and deliquescence	167
7.2.4. Salt–water–material interaction.	168

7.3. Salts in heritage sites	170
7.3.1. Nature and origin of salts	170
7.3.2. Rise and distribution of salts in masonry	172
7.3.3. Weathering mechanisms	174
7.4. Treatment of objects/monuments contaminated by salts	177
7.4.1. Stabilizing environmental conditions	178
7.4.2. Salt extraction	180
7.5. Conclusion	183
7.6. Acknowledgments	184
7.7. References	184
Chapter 8. Salt Crystallization in a Changing Environment	189
Beatriz MENÉNDEZ	
8.1. Introduction	189
8.2. Crystallization/dissolution and phase change of salts depending on environmental conditions	191
8.2.1. Behavior of simple salts	192
8.2.2. Behavior of complex salts	195
8.2.3. Modeling the crystallization of complex salts	202
8.2.4. Model limits	206
8.3. Change in environmental conditions	207
8.3.1. Atmospheric pollution	209
8.3.2. Climate	213
8.4. Estimation of future degradation of materials by salts	216
8.4.1. Methods used	216
8.4.2. Limitations of methods used	219
8.5. Conclusion	223
8.6. References	224
List of Authors	231
Index	233
