Preface	ix
Introduction	xiii
Acknowledgments	xxiii
Chapter 1. Human and Animal Communication	1
1.1. Language, that amazing thing	1
1.2. The mechanics of language	2
1.3. What is syntax?	10
1.4. Meaning	11
1.5. Beyond meaning	13
1.6. Non-human languages	14
1.7. Types of language	17
1.8. Why give information?	23
1.9. The autonomy of information	28
1.10. Language and information	31
Chapter 2. Genetic Information	33
2.1. A central concept in biology	33
2.2. Epigenetic information	40
2.3. The environment	42
2.4. Information: from replication to reproduction	48
2.5. Mutation and selection	49
2.6. The story of the message: phylogeny and coalescence	52

2.7. The point of view of the reading system	58
2.8. We cannot see the wood for the trees.	60
2.9. The tree and the web ... and some complexities there!	64
2.10. When information and individual can no longer be confused.	66
2.11. Conflicts and levels of integration: avatars	71
2.12. Sociobiology, altruism and information	73
2.13. The “all genetics” versus epigenetics	75
2.14. What is Life?	77
Chapter 3. Ecosystem and Information	79
3.1. An information-centered perspective of the ecosystem	79
3.2. Reservoirs of ecosystemic information	82
3.3. Biodiversity: an ecosystem made up of individuals	87
3.4. Phylogeny of communities: biology in the arena.	90
3.5. The ecosystem: a physical system or a biological system?	92
3.6. An ecosystem made up of matter and energy	96
3.7. Failure of the physical approach	98
3.8. Physics has not said its last word	106
3.9. The great challenges of ecology.	110
3.10. Flow and balance of ecosystemic information	117
3.11. Ecosystemic codes	121
3.12. The languages of the ecosystem	129
Chapter 4. Can We Define Information?	133
4.1. Information as surprise	133
4.2. Information measured by complexity	136
4.3. Information as organized complexity.	137
4.4. Information as compression	139
4.5. Coding and information reading	142
4.6. Memory	145
Chapter 5. Evolution of Information	149
5.1. In the beginning was structure.	149
5.2. The first languages were ecosystemic	151
5.3. The replicators and the conservators	152
5.4. Biological languages	155
5.5. Information selection	156
5.6. Messages and languages	158
5.7. The complexification of codes.	159

5.8. Complexification of languages	161
5.9. The re-creation of life.	164
5.10. And what about tomorrow?.	166
