<b>Foreword</b> . . . . .	xi
<b>Acknowledgments</b> . . . . .	xiii
<b>Chapter 1. Why and Where Uncertainties</b> . . . . .	1
1.1. Sources and forms of uncertainty . . . . .	1
1.2. Types of uncertainty . . . . .	3
1.3. Sources of uncertainty . . . . .	3
1.4. Conclusion . . . . .	6
<b>Chapter 2. Models and Language of Uncertainty</b> . . . . .	9
2.1. Introduction . . . . .	9
2.2. Probability theory . . . . .	11
2.2.1. Interpretations . . . . .	11
2.2.2. Fundamental notions . . . . .	13
2.2.3. Discussion . . . . .	15
2.3. Belief functions theory . . . . .	15
2.3.1. Representation of beliefs . . . . .	16
2.3.2. Combination rules . . . . .	18
2.3.3. Extension and marginalization . . . . .	20
2.3.4. Pignistic transformation . . . . .	20
2.3.5. Discussion . . . . .	21
2.4. Fuzzy set theory . . . . .	21
2.4.1. Basic definitions . . . . .	22
2.4.2. Operations on fuzzy sets . . . . .	22

2.4.3. Fuzzy relations . . . . .	23
2.5. Fuzzy arithmetic . . . . .	25
2.5.1. Fuzzy numbers . . . . .	26
2.5.2. Fuzzy probabilities . . . . .	28
2.5.3. Discussion . . . . .	29
2.6. Possibility theory . . . . .	29
2.6.1. Definitions . . . . .	30
2.6.2. Possibility and necessity measures . . . . .	30
2.6.3. Operations on possibility and necessity measures . . . . .	32
2.7. Random set theory . . . . .	32
2.7.1. Basic definitions . . . . .	33
2.7.2. Expectation of random sets . . . . .	34
2.7.3. Random intervals . . . . .	35
2.7.4. Confidence interval . . . . .	35
2.7.5. Discussion . . . . .	36
2.8. Confidence structures or c-boxes . . . . .	36
2.8.1. Basic notions . . . . .	36
2.8.2. Confidence distributions . . . . .	37
2.8.3. P-boxes and C-boxes . . . . .	38
2.8.4. Discussion . . . . .	40
2.9. Imprecise probability theory . . . . .	40
2.9.1. Definitions . . . . .	41
2.9.2. Basic properties . . . . .	42
2.9.3. Discussion . . . . .	44
2.10. Conclusion . . . . .	44
<b>Chapter 3. Risk Graphs and Risk Matrices: Application of Fuzzy Sets and Belief Reasoning . . . . .</b>	<b>47</b>
3.1. SIL allocation scheme . . . . .	48
3.1.1. Safety instrumented systems (SIS) . . . . .	48
3.1.2. Conformity to standards ANSI/ISA S84.01-1996 and IEC 61508 . . . . .	49
3.1.3. Taxonomy of risk/SIL assessment methods . . . . .	50
3.1.4. Risk assessment . . . . .	50
3.1.5. SIL allocation process . . . . .	52

---

3.1.6. The use of experts' opinions . . . . .	53
3.2. SIL allocation based on possibility theory . . . . .	54
3.2.1. Eliciting the experts' opinions . . . . .	54
3.2.2. Rating scales for parameters . . . . .	55
3.2.3. Subjective elicitation of the risk parameters . . . . .	56
3.2.4. Calibration of experts' opinions . . . . .	59
3.2.5. Aggregation of the opinions . . . . .	61
3.3. Fuzzy risk graph . . . . .	65
3.3.1. Input fuzzy partition and fuzzification . . . . .	65
3.3.2. Risk/SIL graph logic by fuzzy inference system . . . . .	66
3.3.3. Output fuzzy partition and defuzzification . . . . .	67
3.3.4. Illustration case . . . . .	69
3.4. Risk/SIL graph: belief functions reasoning . . . . .	72
3.4.1. Elicitation of expert opinions in the belief functions theory . . . . .	72
3.4.2. Aggregation of expert opinions . . . . .	73
3.5. Evidential risk graph . . . . .	75
3.6. Numerical illustration . . . . .	77
3.6.1. Clustering of experts' opinions . . . . .	77
3.6.2. Aggregation of preferences . . . . .	78
3.6.3. Evidential risk/SIL graph . . . . .	79
3.7. Conclusion . . . . .	81
<b>Chapter 4. Dependability Assessment Considering Interval-valued Probabilities . . . . .</b>	<b>83</b>
4.1. Interval arithmetic . . . . .	84
4.1.1. Interval-valued parameters . . . . .	84
4.1.2. Interval-valued reliability . . . . .	85
4.1.3. Assessing the imprecise average probability of failure on demand . . . . .	86
4.2. Constraint arithmetic . . . . .	90
4.3. Fuzzy arithmetic . . . . .	93
4.3.1. Application example . . . . .	95
4.3.2. Monte Carlo sampling approach . . . . .	97
4.4. Discussion . . . . .	99

---

4.4.1. Markov chains . . . . .	100
4.4.2. Multiphase Markov chains . . . . .	101
4.4.3. Markov chains with fuzzy numbers . . . . .	102
4.4.4. Fuzzy modeling of SIS characteristic parameters . . . . .	104
4.5. Illustration . . . . .	105
4.5.1. Epistemic approach . . . . .	106
4.5.2. Enhanced Markov analysis . . . . .	113
4.6. Decision-making under uncertainty . . . . .	115
4.7. Conclusion . . . . .	117
<b>Chapter 5. Evidential Networks . . . . .</b>	<b>119</b>
5.1. Main concepts . . . . .	119
5.1.1. Temporal dimension . . . . .	121
5.1.2. Computing believe and plausibility measures as bounds . . . . .	123
5.1.3. Inference . . . . .	124
5.1.4. Modeling imprecision and ignorance in nodes . . . . .	126
5.1.5. Conclusion . . . . .	128
5.2. Evidential Network to model and compute Fuzzy probabilities . . . . .	128
5.2.1. Fuzzy probability and basic probability assignment . . . . .	128
5.2.2. Nested interval-valued probabilities to fuzzy probability . . . . .	129
5.2.3. Computation mechanism . . . . .	130
5.3. Evidential Networks to compute p-box . . . . .	131
5.3.1. Connection between p-boxes and BPA . . . . .	132
5.3.2. P-boxes and interval-valued probabilities . . . . .	133
5.3.3. P-boxes and precise probabilities . . . . .	133
5.3.4. Time-dependent p-boxes . . . . .	134
5.3.5. Computation mechanism . . . . .	134
5.4. Modeling some reliability problems . . . . .	136
5.4.1. BPA for reliability problems . . . . .	136
5.4.2. Building Boolean CMT (AND, OR) . . . . .	137

5.4.3. Conditional mass table for more than two inputs (k-out-of-n:G gate) . . . . .	138
5.4.4. Nodes for <i>Pls</i> and <i>Bel</i> in the binary case . . . . .	140
5.4.5. Modeling reliability with p-boxes . . . . .	140
5.5. Illustration by application of Evidential Networks . . . . .	145
5.5.1. Reliability assessment of system . . . . .	145
5.5.2. Inference for failure isolation . . . . .	153
5.5.3. Assessing the fuzzy reliability of systems . . . . .	155
5.5.4. Assessing the p-box reliability by EN . . . . .	162
5.6. Conclusion . . . . .	169

## **Chapter 6. Reliability Uncertainty and Importance**

<b>Factors</b> . . . . .	171
6.1. Introduction . . . . .	171
6.2. Hypothesis and notation . . . . .	173
6.3. Probabilistic importance measures of components . . . . .	174
6.3.1. Birnbaum importance measure . . . . .	175
6.3.2. Component criticality measure . . . . .	176
6.3.3. Diagnostic importance measure . . . . .	176
6.3.4. Reliability achievement worth (RAW) . . . . .	177
6.3.5. Reliability reduction worth (RRW) . . . . .	177
6.3.6. Observations and limitations . . . . .	178
6.3.7. Importance measures computation . . . . .	179
6.4. Probabilistic importance measures of pairs and groups of components . . . . .	179
6.4.1. Measures on minimum cutsets/pathsets/groups . . . . .	181
6.4.2. Extension of RAW and RRW to pairs . . . . .	182
6.4.3. Joint reliability importance factor (JR) . . . . .	182
6.5. Uncertainty importance measures . . . . .	184
6.5.1. Uncertainty probabilistic importance measures . . . . .	184
6.5.2. Importance factors with imprecision . . . . .	186
6.6. Importance measures with fuzzy probabilities . . . . .	188
6.6.1. Fuzzy importance measures . . . . .	189
6.6.2. Fuzzy uncertainty measures . . . . .	190
6.7. Illustration . . . . .	191
6.7.1. Importance factors on a simple system . . . . .	192

6.7.2. Importance factors in a complex case . . . . .	195
6.7.3. Illustration of group importance measures . . . . .	197
6.7.4. Uncertainty importance factors . . . . .	200
6.7.5. Fuzzy importance measures . . . . .	203
6.8. Conclusion . . . . .	206
<b>Conclusion</b> . . . . .	207
<b>Bibliography</b> . . . . .	211
<b>Index</b> . . . . .	225
