Preface	ix
Acknowledgments	xiii
Introduction	xv
Part 1. Basic Methods	1
Chapter 1. Preliminary Concepts	3
1.1. Introduction to random evolutions	3
1.2. Abstract potential operators	7
1.3. Markov processes: operator semigroups	11
1.4. Semi-Markov processes	14
1.5. Lumped Markov chains	17
1.6. Switched processes in Markov and semi-Markov media	19
Chapter 2. Homogeneous Random Evolutions (HRE) and their Applications	23
2.1. Homogeneous random evolutions (HRE)	24
2.1.1. Definition and classification of HRE	24
2.1.2. Some examples of HRE	25
2.1.3. Martingale characterization of HRE	28
2.1.4. Analogue of Dynkin's formula for HRE	34
2.1.5. Boundary value problems for HRE	36
2.2. Limit theorems for HRE	37
2.2.1. Weak convergence of HRE	37
2.2.2. Averaging of HRE	39

2.2.3. Diffusion approximation of HRE	42
2.2.4. Averaging of REs in reducible phase space: merged HRE	45
2.2.5. Diffusion approximation of HRE in reducible phase space	48
2.2.6. Normal deviations of HRE	51
2.2.7. Rates of convergence in the limit theorems for HRE	53
Part 2. Applications to Reliability, Random Motions, and Telegraph Processes	57
Chapter 3. Asymptotic Analysis for Distributions of Markov, Semi-Markov and Random Evolutions	59
3.1. Asymptotic distribution of time to reach a level that is infinitely increasing by a family of semi-Markov processes on the set \mathbb{N}	61
3.2. Asymptotic inequalities for the distribution of the occupation time of a semi-Markov process in an increasing set of states	74
3.3. Asymptotic analysis of the occupation time distribution of an embedded semi-Markov process (with increasing states) in a diffusion process	77
3.4. Asymptotic analysis of a semigroup of operators of the singularly perturbed random evolution in semi-Markov media	82
3.5. Asymptotic expansion for distribution of random motion in Markov media under the Kac condition	90
3.5.1. The equation for the probability density of the particle position performing a random walk in \mathbb{R}^n	90
3.5.2. Equation for the probability density of the particle position	91
3.5.3. Reduction of a singularly perturbed evolution equation to a regularly perturbed equation	93
3.6. Asymptotic estimation for application of the telegraph process as an alternative to the diffusion process in the Black–Scholes formula	96
3.6.1. Asymptotic expansion for the singularly perturbed random evolution in Markov media in case of disbalance	96
3.6.2. Application to an economic model of stock market	100
Chapter 4. Random Switched Processes with Delay in Reflecting Boundaries	103
4.1. Stationary distribution of evolutionary switched processes in a Markov environment with delay in reflecting boundaries	104
4.2. Stationary distribution of switched process in semi-Markov media with delay in reflecting barriers	109

4.2.1. Infinitesimal operator of random evolution with semi-Markov switching	110
4.2.2. Stationary distribution of random evolution in semi-Markov media with delaying boundaries in balance case	113
4.2.3. Stationary distribution of random evolution in semi-Markov media with delaying boundaries	121
4.3. Stationary efficiency of a system with two unreliable subsystems in cascade and one buffer: the Markov case	124
4.3.1. Introduction	124
4.3.2. Stationary distribution of Markov stochastic evolutions	125
4.3.3. Stationary efficiency of a system with two unreliable subsystems in cascade and one buffer	129
4.3.4. Mathematical model	131
4.3.5. Main mathematical results	133
4.3.6. Numerical results for the symmetric case	138
4.4. Application of random evolutions with delaying barriers to modeling control of supply systems with feedback: the semi-Markov switching process	141
4.4.1. Estimation of stationary efficiency of one-phase system with a reservoir	141
4.4.2. Estimation of stationary efficiency of a production system with two unreliable supply lines	149
Chapter 5. One-dimensional Random Motions in Markov and Semi-Markov Media	159
5.1. One-dimensional semi-Markov evolutions with general Erlang sojourn times	160
5.1.1. Mathematical model	160
5.1.2. Solution of PDEs with constant coefficients and derivability of functions ranged in commutative algebras	168
5.1.3. Infinite-dimensional case	171
5.1.4. The distribution of one-dimensional random evolutions in Erlang media	172
5.2. Distribution of limiting position of fading evolution	181
5.2.1. Distribution of random power series in cases of uniform and Erlang distributions	182
5.2.2. The distribution of the limiting position	190
5.3. Differential and integral equations for jump random motions	191
5.3.1. The Erlang jump telegraph process on a line	192
5.3.2. Examples	198

5.4. Estimation of the number of level crossings by the telegraph process	199
5.4.1. Estimation of the number of level crossings for the telegraph process in Kac's condition	202
