Foreword	ix
Introduction	xiii
Chapter 1. Magnetic Methods	1
1.1. Magnetism, the natural power for our compasses	1
1.1.1. To introduce the topic: an example of magnetic prospecting or mapping	2
1.1.2. Origin of magnetism	4
1.1.3. Vector representation of magnetism and the magnetic dipole	8
1.1.4. The Earth's magnetic field (or, more accurately, magnetic induction)	13
1.2. The magnetism of rocks and objects containing iron	16
1.2.1. The magnetism of rocks and magnetite	16
1.2.2. Induced magnets, remanent magnets	19
1.3. Magnetic anomalies and prospecting	22
1.3.1. The magnetic dipole and its field.	22
1.3.2. Implementing magnetic mapping survey	29
1.3.3. Taking natural time variations of the field into account (and other "drifts")	33
1.3.4. Total field, pseudo-vertical gradient of total field and pseudo-vertical gradient	34
1.3.5. Pre-processing of magnetic maps	43
1.3.6. Type of anomalies depending on the latitude	45
1.3.7. Interpreting a magnetic anomaly: some examples.	47
1.3.8. Other procedures	52
1.3.9. Getting yourself in battle order for making a magnetic map!	53
1.4. Let us build a magnetometer (or something better)	54

1.4.1. A gradiometer with two single component fluxgate sensors.	55
1.4.2. Measuring total field using a 3-component fluxgate (and how to calibrate it)	57
1.5. Acquisition system for the three-component fluxgate for total field . .	58
1.5.1. Device features	59
1.5.2. Functional study of the project	59
1.5.3. Circuit power supply	60
1.5.4. The fluxgate sensor.	61
1.5.5. Cable and connectors.	62
1.5.6. Signal filtering	64
1.5.7. Digital analog conversions	69
1.5.8. Acquisition principle	76
1.6. Mechanical considerations	84
1.7. Appendix to Chapter 1: calibration of a three-axis fluxgate magnetometer	85
Chapter 2. The Electromagnetic Induction or “Slingram” Method . .	93
2.1. Principle of induction and Slingram	93
2.1.1. Induction and eddy currents.	94
2.1.2. An example of Slingram prospecting	99
2.2. Slingram response on the field: different scenarios	100
2.2.1. Apparent conductivity for a homogeneous tabular terrain and ordinary conductivity complexes	100
2.2.2. The answer in the presence of metal conductors.	106
2.2.3. Interpretation and limitations of the method	107
2.2.4. Slingram map examples	110
2.3. How to build an EMI-Slingram device.	114
2.3.1. Sizing the transmitter.	116
2.3.2. Electronics design	118
2.3.3. Initial calibration and calibration of the Slingram	126
2.3.4. Data acquisition	128
Chapter 3. Processing Geophysical Maps	129
3.1. Introduction.	129
3.1.1. How to make a map	132
3.1.2. Map representation software packages	132
3.1.3. Free software	133
3.2. Preparing a regular grid.	133
3.3. Representation with contour lines: an algorithm problem	141
3.4. Artifacts on maps	143

3.4.1. Profile effects	143
3.4.2. Chevron effect.	145
3.4.3. Regional	145
3.5. Reduction to the pole for magnetic maps	146
3.6. Other operations	148
