Preface	xi
Chapter 1. Discrete Time Single-server Queues with Interdependent Interarrival and Service Times	1
Attahiru Sule ALFA	
1.1. Introduction	1
1.2. The Geo/Geo/1 case	3
1.2.1. Arrival probability as a function of service completion probability	4
1.2.2. Service times dependent on interarrival times	6
1.3. The PH/PH/1 case	7
1.3.1. A review of discrete PH distribution	7
1.3.2. The PH/PH/1 system	9
1.4. The model with multiple interarrival time distributions	10
1.4.1. Preliminaries	11
1.4.2. A queueing model with interarrival times dependent on service times	13
1.5. Interdependent interarrival and service times	15
1.5.1. A discrete time queueing model with bivariate geometric distribution	16
1.5.2. Matrix equivalent model	17
1.6. Conclusion	18
1.7. Acknowledgements	18
1.8. References	18

Chapter 2. Busy Period, Congestion Analysis and Loss Probability in Fluid Queues	21
Fabrice GUILLEMIN, Marie-Ange REMICHE and Bruno SERICOLA	
2.1. Introduction	21
2.2. Modeling a link under congestion and buffer fluctuations	24
2.2.1. Model description	25
2.2.2. Peaks and valleys	26
2.2.3. Minimum valley height in a busy period	28
2.2.4. Maximum peak level in a busy period	33
2.2.5. Maximum peak under a fixed fluid level	37
2.3. Fluid queue with finite buffer	42
2.3.1. Congestion metrics	42
2.3.2. Minimum valley height in a busy period	43
2.3.3. Reduction of the state space	46
2.3.4. Distributions of $\tau_1(x)$ and $V_1(x)$	47
2.3.5. Sequences of idle and busy periods	49
2.3.6. Joint distributions of loss periods and loss volumes	51
2.3.7. Total duration of losses and volume of information lost	56
2.4. Conclusion	59
2.5. References	60
Chapter 3. Diffusion Approximation of Queueing Systems and Networks	63
Dimitri KOROLIUK and Vladimir S. KOROLIUK	
3.1. Introduction	63
3.2. Markov queueing processes	64
3.3. Average and diffusion approximation	65
3.3.1. Average scheme	65
3.3.2. Diffusion approximation scheme	68
3.3.3. Stationary distribution	73
3.4. Markov queueing systems	78
3.4.1. Collective limit theorem in R^1	78
3.4.2. Systems of M/M type	81
3.4.3. Repairman problem	82
3.5. Markov queueing networks	85
3.5.1. Collective limit theorems in R^N	85
3.5.2. Markov queueing networks	89
3.5.3. Superposition of Markov processes	91
3.6. Semi-Markov queueing systems	92
3.7. Acknowledgements	96
3.8. References	96

Chapter 4. First-come First-served Retrial Queueing System by Laszlo Lakatos and its Modifications	97
Igor Nikolaevich KOVALENKO [†]	
4.1. Introduction	97
4.2. A contribution by Laszlo Lakatos and his disciples	98
4.3. A contribution by E.V. Koba	98
4.4. An Erlangian and hyper-Erlangian approximation for a Laszlo Lakatos-type queueing system	99
4.5. Two models with a combined queueing discipline	102
4.6. References	104
Chapter 5. Parameter Mixing in Infinite-server Queues	107
Lucas VAN KREVELD and Onno BOXMA	
5.1. Introduction	107
5.2. The $M_\Lambda/\text{Cox}_n/\infty$ queue	109
5.2.1. The differential equation	110
5.2.2. Calculating moments	113
5.2.3. Steady state	120
5.2.4. $M_\Lambda/M/\infty$	125
5.3. Mixing in Markov-modulated infinite-server queues	131
5.3.1. The differential equation	131
5.3.2. Calculating moments	133
5.4. Discussion and future work	142
5.5. References	143
Chapter 6. Application of Fast Simulation Methods of Queueing Theory for Solving Some High-dimension Combinatorial Problems	145
Igor KUZNETSOV and Nickolay KUZNETSOV	
6.1. Introduction	146
6.2. Upper and lower bounds for the number of some k -dimensional subspaces of a given weight over a finite field	147
6.2.1. A general fast simulation algorithm	149
6.2.2. An auxiliary algorithm	153
6.2.3. Exact analytical formulae for the cases $k = 1$ and $k = 2$	155
6.2.4. The upper and lower bounds for the probability $\mathbf{P}\{Y_\omega(\bar{r})\}$	158
6.2.5. Numerical results	164
6.3. Evaluation of the number of “good” permutations by fast simulation on the SCIT-4 multiprocessor computer complex	167
6.3.1. Modified fast simulation method	168
6.3.2. Numerical results	171
6.4. References	174

Chapter 7. Diffusion and Gaussian Limits for Multichannel Queueing Networks	177
Eugene LEBEDEV and Hanna LIVINSKA	
7.1. Introduction	177
7.2. Model description and notation	182
7.3. Local approach to prove limit theorems	184
7.3.1. Network of the $[GI M \infty]^r$ -type in heavy traffic	185
7.4. Limit theorems for networks with controlled input flow	190
7.4.1. Diffusion approximation of $[SM M \infty]^r$ -networks	190
7.4.2. Asymptotics of stationary distribution for $[SM GI \infty]^r$ -networks	192
7.4.3. Convergence to Ornstein–Uhlenbeck process	194
7.5. Gaussian approximation of networks with input flow of general structure	195
7.5.1. Gaussian approximation of $[G M \infty]^r$ -networks	195
7.5.2. Criterion of Markovian behavior for r -dimensional Gaussian processes	197
7.5.3. Non-Markov Gaussian approximation of $[G GI \infty]^r$ -networks	198
7.6. Limit processes for network with time-dependent input flow	201
7.6.1. Gaussian approximation of $[\vec{M}_t M \infty]^r$ -networks in heavy traffic	201
7.6.2. Limit process in case of asymptotically large initial load	205
7.7. Conclusion	207
7.8. Acknowledgements	208
7.9. References	208
Chapter 8. Recent Results in Finite-source Retrial Queues with Collisions	213
Anatoly NAZAROV, János SZTRIK and Anna KVACH	
8.1. Introduction	213
8.2. Model description and notations	216
8.3. Systems with a reliable server	220
8.3.1. M/M/1 systems	220
8.3.2. M/GI/1 system	224
8.4. Systems with an unreliable server	229
8.4.1. M/M/1 system	229
8.4.2. M/GI/1 system	237
8.4.3. Stochastic simulation of special systems	240
8.4.4. Gamma distributed retrial times	242
8.4.5. The effect of breakdowns disciplines	243
8.5. Conclusion	251
8.6. Acknowledgments	253
8.7. References	253

Chapter 9. Strong Stability of Queueing Systems and Networks: a Survey and Perspectives	259
Boualem RABTA, Ouiza LEKADIR and Djamil AÏSSANI	
9.1. Introduction	259
9.2. Preliminary and notations	261
9.3. Strong stability of queueing systems	263
9.3.1. $M/M/1$ queue	264
9.3.2. $PH/M/1$ and $M/PH/1$ queues	269
9.3.3. $G/M/1$ and $M/G/1$ queues	270
9.3.4. Other queues	276
9.3.5. Queueing networks	277
9.3.6. Non-parametric perturbation	286
9.4. Conclusion and further directions	287
9.5. References	287
Chapter 10. Time-varying Queues: a Two-time-scale Approach	293
George YIN, Hanqin ZHANG and Qing ZHANG	
10.1. Introduction	293
10.2. Time-varying queues	295
10.3. Main results	298
10.3.1. Large deviations of two-time-scale queues	298
10.3.2. Computation of $H(y, t)$	301
10.3.3. Applications to queueing systems	303
10.4. Concluding remarks	309
10.5. References	310
List of Authors	313
Index	315
