Preface	xi
Chapter 1. Introduction to Structural Analysis	1
1.1. Introduction.	1
1.2. Concept of a structure.	2
1.3. Structural analysis	2
1.4. History of structural analysis	3
1.5. Classification of structures.	4
1.5.1. Plane trusses	4
1.5.2. Beams.	6
1.5.3. Frames	7
1.5.4. Crossbeams	8
1.5.5. Arches	8
1.6. Static indeterminacy of structures.	8
1.6.1. Trusses	9
1.6.2. Beam and frames	11
1.7. Sign convention	14
1.8. Conclusion	15
1.9. Problems	16
Chapter 2. Actions on Structures	21
2.1. Loads	21
2.2. Permanent loads	22
2.3. Live loads	23
2.4. Snow loads	26
2.5. Wind loads	29
2.6. Seismic loads.	40
2.7. Thermal loads	47

2.8. Hydrostatic loads and land thrust	48
2.9. Conclusion	49
2.10. Problems.	49
Chapter 3. External Analysis of Plane Structures	55
3.1. External equilibrium of structures	55
3.2. External and internal actions.	57
3.2.1. External actions	58
3.2.2. Internal actions	58
3.3. Types of plane structure supports	59
3.4. Static determinacy, static indeterminacy and structural stability.	59
3.4.1. External analysis	59
3.4.2. Internal analysis.	61
3.5. Calculation of support reactions.	63
3.6. Superposition principle	71
3.7. Matrix formulation	72
3.8. Concept of displacement	76
3.9. Concept of work	77
3.10. Principle of virtual work	80
3.11. Calculation of reactions by the virtual work method	81
3.12. Conclusion	84
3.13. Problems.	85
Chapter 4. Analysis of Trusses	91
4.1. Definition of a truss	91
4.2. Hypothesis of analysis	92
4.3. Sign convention and representation of internal forces.	93
4.4. Degree of static indeterminacy and stability of trusses	94
4.4.1. External analysis	94
4.4.2. Internal analysis.	95
4.5. Analysis methods of trusses	96
4.5.1. Method of joint equilibrium.	97
4.5.2. Method of sections	100
4.5.3. Matrix method.	104
4.5.4. Graphic or Cremona method	109
4.6. Composite trusses	111
4.7. Complex trusses	118
4.8. Space trusses	120
4.8.1. Space truss analysis	121
4.9. Conclusion	127
4.10. Problems.	127

Chapter 5. Internal Analysis of Beams and Frames	135
5.1. Normal force, shear force and bending moment	135
5.2. Sign convention	137
5.3. Beam analysis procedure	138
5.4. Diagrams of internal actions	143
5.5. Relationship between loading, shear force and bending moment	146
5.6. Static determinacy, static indeterminacy and instability of beams and frames	147
5.7. Plane frame analysis procedure	148
5.8. Conclusion	160
5.9. Problems	160
Chapter 6. Deflections of Elastic Beams: Energy Methods	167
6.1. Elastic deflection of beams	167
6.2. Calculation of deflections	169
6.2.1. Method of the differential equation of the elastic line	169
6.2.2. Direct integration method	173
6.2.3. Moment-area method	176
6.2.4. Conjugate beam method	181
6.3. Superposition principle	185
6.4. Conclusion	188
6.5. Problems	189
Chapter 7. Structural Deflections: Energy Methods	193
7.1. Work of external actions	193
7.2. Internal or strain energy	200
7.3. Principle of energy conservation	204
7.4. Principle of virtual work	208
7.4.1. Method of virtual work: trusses	211
7.4.2. Method of virtual work: beams	217
7.4.3. Method of virtual work: frames	225
7.5. Conservation of energy and strain energy	231
7.6. Castigliano's theorem	231
7.6.1. Displacement theorem statement	232
7.6.2. Slope theorem statement	232
7.6.3. Application of Castigliano's theorem to truss analysis	234
7.6.4. Using Castigliano's theorem to analyze beams and frames	236
7.7. Maxwell–Betti law	241
7.8. Conclusion	245
7.9. Problems	246

Chapter 8. Cable Analysis	253
8.1. Introduction.	253
8.2. Mechanical characteristics of cables	254
8.3. Hypothesis of cable analysis.	255
8.4. Cable analysis	255
8.4.1. Cables subject to concentrated force.	255
8.4.2. Cables subject to distributed forces	263
8.4.3. Cables subject to any force	272
8.5. Cables with an inflection point outside the cable.	275
8.6. Suspension bridges	280
8.7. Conclusion	283
8.8. Problems	284
Chapter 9. Analysis of Arches	289
9.1. Introduction.	289
9.2. Three-hinged arch	290
9.2.1. Semicircular arch under concentrated load.	291
9.2.2. Semicircular arch under uniformly distributed load.	299
9.2.3. Parabolic arch under concentrated load	302
9.2.4. Parabolic arch under uniformly distributed load.	309
9.2.5. Semicircular arch with support settlements.	314
9.3. Bi-hinged arch	319
9.4. Conclusion	323
9.5. Problems	323
Chapter 10. Influence Lines	329
10.1. Introduction	329
10.2. Influence line definition.	330
10.3. Influence lines of a beam using the equilibrium method	330
10.3.1. Influence lines of a support reaction	331
10.3.2. Influence line of a shear force.	332
10.3.3. Influence line of a bending moment	333
10.4. Influence lines of a frame using the equilibrium method	338
10.4.1. Influence line of support reaction V_A	339
10.5. Analysis steps.	344
10.6. Influence lines of trusses	353
10.7. Influence lines using the Muller–Breslau principle.	356
10.7.1. Influence lines of a support reaction	356
10.7.2. Influence line of a shear force.	360
10.7.3. Influence line of a bending moment	366

10.8. Influence lines of deflections.	372
10.9. Conclusion	375
10.10. Problems	376
Appendices	381
Bibliography	383
Index	387
