Preface	xi
Cédric LHOSSAINE and Élisabeth REMY	
Part 1. Models and Data	1
Chapter 1. Inference of Gene Regulatory Networks from Multi-scale Dynamic Data	3
Arnaud BONNAFFOUX	
1.1. GRN and differentiation	4
1.1.1. The coordination of gene expression by GRNs	4
1.1.2. The process of differentiation	8
1.2. Inference of GRN from population data	10
1.2.1. Population expression data	10
1.2.2. Bayesian approaches	11
1.2.3. Information theory approaches	14
1.2.4. Boolean approaches	16
1.2.5. ODE approaches	18
1.3. Inferring GRNs from single-cell data	20
1.3.1. Single cell expression data	20
1.3.2. Adaptation of GRN inference algorithms for single-cell data analysis	20
1.3.3. Using single-cell stochastic models for GRN inference	21
1.4. Alternative strategies for GRN inference	25
1.5. Performance and limitations of GRN inference	25
1.6. Inference based on the wave of expression concept	27
1.6.1. The differentiation process seen as a dynamic process of signal processing by GRNs	28
1.6.2. Experimental demonstration of waves of expression	30
1.6.3. Using waves of expression for GRN inference	33
1.6.4. Scaling up the distributed computing approach	35

1.7. Conclusion	37
1.8. References	37

Chapter 2. Combinatorial Optimization Problems for Studying Metabolism 45

Clémence FRIOUX and Anne SIEGEL

2.1. Dynamics and functionality of a metabolic network	46
2.1.1. Metabolic networks	46
2.1.2. Reconstruction of metabolic networks	47
2.1.3. From the dynamics of a metabolic network to its function	48
2.2. Understanding the metabolism of non-model organisms: metabolic gap-filling algorithms	50
2.2.1. Metabolism of non-model organisms	50
2.2.2. Reconstruction of the metabolism of non-model species and gap-filling problems	52
2.2.3. Added-value and limitations of metabolic gap-filling problems: example of biotic interactions	53
2.3. Microbiota metabolism: new optimization problems	55
2.3.1. Genomics of microbiota	55
2.3.2. From merged models to compartmentalized models	57
2.3.3. Completion problem for community selection in non-compartmentalized microbiota	57
2.3.4. Completion problem for selecting compartmentalized communities with minimal exchanges	59
2.4. Discrete semantics: a Boolean approximation of metabolic producibility	63
2.4.1. Topological accessibility of compounds and reactions in a metabolic network	64
2.4.2. Activation and cycles	66
2.4.3. Applications	67
2.5. Flux semantics	69
2.5.1. Modeling the response of a metabolic network with fluxes	70
2.5.2. Steady-state cycles	71
2.5.3. Application to the completion of metabolic networks	74
2.6. Comparing semantics: toward a hybrid approach	74
2.6.1. Complementarity of Boolean and stoichiometric abstractions	74
2.6.2. Hybrid completion of metabolic networks	76
2.7. Solving gap-filling problems with answer set programming	77
2.7.1. Model the Boolean activation of a reaction in ASP	78
2.7.2. Non-compartmentalized selection of communities	79
2.7.3. Compartmentalized selection of communities	80
2.8. Conclusion	81
2.9. References	81

Chapter 3. The Challenges of Inferring Dynamic Models from Time Series	89
Tony RIBEIRO, Maxime FOLSCHETTE, Laurent TRILLING, Nicolas GLADE, Katsumi INOUE, Morgan MAGNIN and Olivier ROUX	
3.1. Challenges of learning about time series	90
3.2. Reconstruction of a regulation network (Boolean network) and its logical rules	92
3.2.1. Multi-valued logic	93
3.2.2. Learning operations	96
3.2.3. Dynamical semantics	99
3.2.4. GULA	103
3.2.5. PRIDE	106
3.3. Modeling Thomas networks with delays in ASP	110
3.3.1. Formalisms used	112
3.3.2. Networks	112
3.3.3. ASP technology	115
3.3.4. Description of the problem	116
3.3.5. Implementation	118
3.3.6. Results	121
3.3.7. Synthesis	123
3.4. Promise of machine learning for biology	124
3.4.1. Learning about biological regulatory networks modeling complex behaviors	124
3.4.2. Review of models	125
3.5. References	126
Chapter 4. Connecting Logical Models to Omics Data	129
Jonas BÉAL, Élisabeth REMY and Laurence CALZONE	
4.1. Introduction	129
4.2. Logical models: objectives, nature and tools	132
4.2.1. Objectives and biological questions addressed	132
4.2.2. Logical modeling	133
4.2.3. Tools and resources for logical modeling	135
4.3. Building an influence graph using biological data	135
4.3.1. Defining the outline of the model	135
4.3.2. Construction of the regulation network	136
4.4. Defining logical rules and refining model parameters using biological data	137
4.4.1. Determining logical rules locally	137
4.4.2. Define or modify the logical model as a whole	138
4.5. Data to validate models and predict behaviors	140

4.6. Conclusion	142
4.7. References	142
Part 2. Formal and Semantic Methods	149
Chapter 5. Boolean Networks: Formalism, Semantics and Complexity	151
Loïc PAULEVÉ	
5.1. Introduction	151
5.2. Classical semantics of Boolean networks	154
5.2.1. Definitions	154
5.2.2. Examples	155
5.2.3. Properties	156
5.3. Related formalisms	157
5.3.1. Cellular automata	157
5.3.2. Petri nets	157
5.4. Guarantees against quantitative models	164
5.4.1. Boolean network refinements	165
5.4.2. Counterexample for classical semantics	167
5.4.3. MP Boolean networks	168
5.5. Dynamic properties and complexities	174
5.5.1. Fixed points	174
5.5.2. Reachability between configurations	175
5.5.3. Attractors	178
5.6. Conclusion	181
5.7. Acknowledgments	183
5.8. References	183
Chapter 6. Computational Logic for Biomedicine and Neurosciences	187
Elisabetta DE MARIA, Joëlle DESPEYROUX, Amy FELTY, Pietro LIÒ, Carlos OLARTE and Abdorrahim BAHRAMI	
6.1. Introduction	188
6.2. Biomedicine in linear logic	191
6.2.1. Introduction	191
6.2.2. Logical frameworks, linear logic	193
6.2.3. Modeling in LL	202
6.2.4. Modeling breast cancer progression	204
6.2.5. Verifying properties of the model	208
6.2.6. Conclusion and future perspectives on the biomedicine section	211
6.3. On the use of Coq to model and verify neuronal archetypes	213
6.3.1. Introduction	213
6.3.2. Discrete leaky integrate and fire model	215

6.3.3. The basic archetypes	217
6.3.4. Modeling in Coq	217
6.3.5. Encoding neurons and archetypes in Coq	220
6.3.6. Properties of neurons and archetypes in Coq	224
6.3.7. Conclusions and future work on the archetypes section	227
6.4. Conclusion and perspective	228
6.5. References	230
Chapter 7. The Cell: A Chemical Analog Calculator	235
François FAGES and Franck MOLINA	
7.1. Introduction	235
7.2. Chemical reaction networks	237
7.3. Discrete dynamics and digital calculation	239
7.4. Continuous dynamics and analog computation	240
7.5. Turing-completeness of continuous CRNs	243
7.6. Chemical compiler of calculable functions	246
7.7. Chemical programming of non-living vesicles	249
7.8. 10^{14} networked analog computers	252
7.9. References	253
Chapter 8. Formal Verification Methods for Modeling in Biology: Biological Regulation Networks	255
Gilles BERNOT, H�el�ene COLLAVIZZA and Jean-Paul COMET	
8.1. Introduction	255
8.1.1. Illustrative example: the simplified circadian cycle of mammals	257
8.2. Formalization of Ren�e Thomas’s modeling	258
8.2.1. Static description or influence graph	259
8.2.2. Dynamics of a biological regulation graph	261
8.3. Genetically modified Hoare logic	267
8.3.1. Using experimental observations: an example	268
8.3.2. A language of assertions	269
8.3.3. A language of paths	270
8.3.4. The power of assertions	272
8.3.5. A logic to calculate the weakest precondition	273
8.4. Temporal logic and CTL	278
8.4.1. CTL and model-checking	278
8.4.2. CTL fair path	280
8.5. TotemBioNet	282
8.5.1. Tools	282
8.5.2. Example 1: growth and apoptosis of a tadpole tail	285
8.5.3. Example 2: simplified mammalian cell cycle	287
8.6. Hybrid formalism	289
8.6.1. Hybrid regulation networks	290

8.6.2. Definition of hybrid trajectories	291
8.7. Hybrid Hoare logic	298
8.7.1. Property, path, and assertion languages	299
8.7.2. Hoare triples	302
8.7.3. Weakest precondition calculus	303
8.7.4. Inference rules	304
8.7.5. Holmes BioNet: an implementation of the processing chain	305
8.8. General methodology	307
8.9. Acknowledgments	309
8.10. References	310
Chapter 9. Accessible Pattern Analyses in Kappa Models	313
Jérôme FERET	
9.1. Introduction	313
9.1.1. Context and motivations	313
9.1.2. Modeling languages for molecular interaction systems	314
9.1.3. The Kappa language	315
9.1.4. Abstract interpretation	318
9.1.5. The Kappa ecosystem	320
9.1.6. Content of the chapter	328
9.2. Site graphs	328
9.2.1. Signature	328
9.2.2. Biochemical complexes	330
9.2.3. Patterns	332
9.2.4. Embedding between patterns	334
9.3. Rewriting site graphs	336
9.3.1. Interaction rules	336
9.3.2. Reactions induced by an interaction rule	338
9.3.3. Underlying reaction networks	340
9.4. Analysis of reachable patterns	342
9.4.1. Reachability in a reaction network	343
9.4.2. Abstraction of a set of states	345
9.4.3. Fixed point transfers	350
9.5. Analysis using sets of orthogonal patterns	353
9.5.1. Orthogonal pattern sets	353
9.5.2. Post-processing and visualization of results	359
9.5.3. Study of performance and practical use	359
9.6. Conclusion	362
9.7. References	364
List of Authors	373
Index	377
