<b>Introduction</b> . . . . .	xi
Cécile TANNIER	
<b>Part 1. Basic Concepts and Reference Figures</b> . . . . .	1
<b>Chapter 1. Introduction to Fractal Analysis and Modeling in Human Geography</b> . . . . .	3
Cécile TANNIER and François SÉMÉCURBE	
1.1. Geometric models of the spatial distribution of human settlements: from the use of smooth and regular shapes to the adoption of fractal shapes . . . . .	5
1.2. Description and measurement of the shapes of the spatial distribution of human settlements . . . . .	11
1.3. References . . . . .	17
<b>Chapter 2. Basic Concepts for Fractal Analysis and Modeling in Human Geography</b> . . . . .	23
Cécile TANNIER	
2.1. Methods of construction of fractal figures . . . . .	26
2.1.1. Iterated function systems . . . . .	26
2.1.2. Fractal cascades . . . . .	29
2.1.3. Chaos game . . . . .	30
2.1.4. L-systems (Lindenmayer systems) . . . . .	32
2.1.5. Other methods for creating fractal figures . . . . .	33
2.2. Measuring the size of fractal and non-fractal objects . . . . .	36
2.3. Definition of a fractal object . . . . .	39
2.4. Density and fractal dimension . . . . .	40
2.5. Mathematical fractals versus fractals in the real world . . . . .	44
2.6. Fractality and scale invariance . . . . .	48
2.7. References . . . . .	51

<b>Chapter 3. Fractal Reference Figures</b> . . . . .	55
Cécile TANNIER	
3.1. Fractal curves and islands . . . . .	56
3.1.1. Fractal curves . . . . .	56
3.1.2. Teragons, fractal islands . . . . .	57
3.2. Fractal dusts, gaskets and carpets . . . . .	58
3.2.1. Fractal dusts . . . . .	58
3.2.2. Sierpinski gaskets and carpets . . . . .	62
3.2.3. Box fractal . . . . .	65
3.3. Hybrid fractal figures and multifractal figures . . . . .	66
3.3.1. Hybrid fractal figures . . . . .	66
3.3.2. Multifractal figures . . . . .	73
3.3.3. Composite figures . . . . .	75
3.4. Fractal geometric models of central places . . . . .	77
3.5. Concerning lacunarity . . . . .	81
3.6. Conclusion . . . . .	85
3.7. References . . . . .	86
<b>Part 2. Fractal and Multifractal Analyses of the Spatial Distribution of Human Settlements</b> . . . . .	91
<b>Chapter 4. Fractal Analysis Methods for Characterizing the Spatial Distribution of Human Settlements</b> . . . . .	93
Cécile TANNIER, Gaëtan MONTERO, François SÉMÉCURBE and Isabelle THOMAS	
4.1. Estimating the fractal dimension of a collection of human settlements (point, linear or surface objects) . . . . .	94
4.1.1. General principle governing the estimation of fractal dimensions . . . . .	95
4.1.2. Box-counting dimension . . . . .	99
4.1.3. Correlation dimension . . . . .	103
4.1.4. Geographically Weighted Fractal Analysis (GWFA) . . . . .	105
4.1.5. Clarifications and comments . . . . .	108
4.2. Fractal box-counting and correlation analyses of 50 built-up fabrics . . . . .	113
4.2.1. The built-up fabrics studied . . . . .	114
4.2.2. Choice of parameter values for fractal analyses . . . . .	121
4.2.3. Comparison of the box-counting and correlation dimensions for the 50 built-up fabrics . . . . .	132
4.3. Conclusion . . . . .	141
4.4. References . . . . .	142

<b>Chapter 5. Morphological Delineation of Urban Agglomerations: Comparison of Fractal and Non-Fractal Methods.</b> . . . . .	147
Gaëtan MONTERO, Cécile TANNIER and Isabelle THOMAS	
5.1. Comparison of three fractal and non-fractal methods of morphological delineation of cities . . . . .	148
5.1.1. Presentation and critique of the three methods . . . . .	150
5.1.2. Comparison of methods . . . . .	157
5.1.3. Application of the three methods to identify the morphological limits of the city of Brussels (Belgium) . . . . .	160
5.2. Morphological characterization of cities delimited by means of MorphoLim within 82 French urban areas . . . . .	167
5.2.1. The 82 urban areas studied . . . . .	168
5.2.2. Methodology . . . . .	168
5.2.3. Results . . . . .	172
5.3. Conclusion . . . . .	189
5.4. References . . . . .	189
<b>Chapter 6. Multifractal Analyses of Population Distributions</b> . . . . .	197
François SÉMÉCURBE and Cécile TANNIER	
6.1. Introduction . . . . .	197
6.2. Theoretical presentation of multifractal analysis . . . . .	199
6.2.1. Measures and probabilities: mathematical modeling of population distributions . . . . .	199
6.2.2. Generalized dimensions . . . . .	202
6.2.3. The singularity spectrum (or multifractal spectrum) . . . . .	205
6.2.4. Multifractal formalism . . . . .	207
6.3. Application to the study of the spatial distribution of the population . . . . .	208
6.3.1. Exploration of generalized dimensions . . . . .	209
6.3.2. Typology of spatial distributions according to their multifractal spectrum . . . . .	212
6.4. Conclusion and perspectives . . . . .	216
6.5. References . . . . .	217
<b>Chapter 7. Characterizing Deviations from Scale Invariance Using Cross-Scale Signatures</b> . . . . .	221
François SÉMÉCURBE and Cécile TANNIER	
7.1. Cross-scale signatures: a tool for exploring deviations from scale invariance . . . . .	223
7.1.1. Limitations of fractal dimension for characterizing built patterns . . . . .	223
7.1.2. Calculation of cross-scale signatures . . . . .	226

7.2. Synthesizing the information provided by cross-scale signatures . . . . .	228
7.2.1. Typology of cross-scale signatures using principal component analysis . . . . .	228
7.2.2. Decomposition of cross-scale signatures using orthogonal polynomials . . . . .	233
7.3. Conclusion . . . . .	238
7.4. References . . . . .	238
<b>Part 3. Urban Forms and Fractal Planning . . . . .</b>	<b>241</b>
<b>Chapter 8. Principles of Fractal Planning and Urban Design . . . . .</b>	<b>243</b>
Cécile TANNIER	
8.1. Hypotheses about the functional advantages of fractal built and non-built forms . . . . .	244
8.1.1. Response to public expectations for residential choice and satisfaction . . . . .	244
8.1.2. Spatial structuring of intra-urban parks and green spaces . . . . .	249
8.1.3. Preservation of biodiversity . . . . .	250
8.1.4. Intra- and inter-urban spatial hierarchies . . . . .	252
8.1.5. Shape of the perimeter of urban agglomerations . . . . .	253
8.2. Fractal planning standards: between myths and realities . . . . .	254
8.2.1. Is there a “right” fractal dimension for city planning? . . . . .	254
8.2.2. Are fractal city shapes, by nature, optimal? . . . . .	256
8.3. Why and how to introduce fractal geometric rules into geographic models of urban and regional planning? . . . . .	258
8.3.1. MUP-City: simulation of fractal residential development under accessibility constraints . . . . .	259
8.3.2. <i>Fractalopolis</i> : design of multifractal urban development plans . . . . .	261
8.3.3. Fractal geometric rules in geographic models of cities and territories . . . . .	265
8.4. Conclusion . . . . .	267
8.5. References . . . . .	269
<b>Chapter 9. Multifractal Forward Planning: The <i>Fractalopolis</i> Model Applied to the Case of Greater Paris . . . . .</b>	<b>277</b>
Pierre FRANKHAUSER and Olivier BONIN	
9.1. Planning for accessibility: reducing distances traveled and organizing urban centers . . . . .	279
9.1.1. Accessibility and residential satisfaction . . . . .	279
9.1.2. Social demand: expectations and needs for individual mobility . . . . .	281
9.1.3. From the hierarchy of individual needs to the hierarchy of central places . . . . .	281

---

9.2. Integrating green and blue infrastructure into a planning process . . . . .	283
9.2.1. Green infrastructure to reduce heat islands . . . . .	283
9.2.2. Green infrastructure to protect biodiversity. . . . .	284
9.2.3. Green infrastructure as a planning concept . . . . .	286
9.3. <i>Fractalopolis</i> : a multi-scale development model . . . . .	291
9.3.1. A precursor: TOD, itself inspired by the Garden City . . . . .	292
9.3.2. Fractal geometry as a basis for reflections on planning . . . . .	294
9.3.3. Hierarchy of central places linked by green and blue infrastructure . . . . .	300
9.3.4. Formalization of accessibility . . . . .	302
9.4. Example of application: from Greater Paris to the <i>Est Ensemble</i> sector . . . . .	311
9.4.1. Multifractal development planning . . . . .	312
9.4.2. Assessment of potential residential satisfaction . . . . .	317
9.4.3. Scenarios for spatial distribution of dwellings . . . . .	320
9.5. Conclusion . . . . .	326
9.6. References . . . . .	328
<b>Conclusion</b> . . . . .	335
Isabelle THOMAS
