Preface	xi
Cédric LAURENT	
Introduction: Mechanics of Living Tissues: Applications, Challenges and Methods	xiii
Cédric LAURENT	
Chapter 1. Biomechanics of the Liver: Characterizations, Modeling and Clinical Applications.	1
Simon CHATELIN, Philippe GARTEISER and Bernard E. VAN BEERS	
1.1. Anatomy and clinical issues	1
1.1.1. Detailed anatomy	1
1.1.2. Main pathologies of the liver	3
1.1.3. Main applications of liver biomechanics	4
1.2. Experimental biomechanical characterizations	5
1.2.1. Characterizations of hepatic parenchyma	6
1.2.2. Influence of the vascular system on the mechanical response	10
1.2.3. Influence of the capsule on the mechanical response	11
1.3. Elastography for the diagnosis of fibrosis, cirrhosis, inflammation and liver tumors	12
1.3.1. Ultrasonic elastography	12
1.3.2. Magnetic resonance elastography	14
1.4. Mechanical modeling	17
1.4.1. Geometry and boundary conditions	17

1.4.2. Constitutive mechanical laws	18
1.5. Conclusion and outlook.	21
1.6. Acknowledgments	21
1.7. References	22
Chapter 2. Biomechanics of the Skin: Characterizations, Modeling and Scalp Applications	33
Yves VALLET and Cédric LAURENT	
2.1. Anatomy and properties of the skin.	34
2.1.1. Anatomy and microstructure	34
2.1.2. Mechanical properties	35
2.2. Characterization of the mechanical properties of the skin	37
2.2.1. Ex vivo characterization	40
2.2.2. In vivo characterization	42
2.3. Imaging of the skin	45
2.4. Modeling the mechanical behavior of the skin	47
2.5. A special case: the scalp	50
2.5.1. Anatomy and specificities of the scalp	50
2.5.2. Towards computational simulation of scalp behavior.	51
2.6. References	54
Chapter 3. Biomechanics of the Cornea	65
Chloé GIRAUDET and Jean-Marc ALLAIN	
3.1. Anatomy and clinical problems	65
3.2. Experimental characterization.	72
3.2.1. Imaging.	72
3.2.2. Mechanical characterization.	74
3.3. Modeling mechanical behavior	86
3.4. Biomaterials	88
3.5. Acknowledgements	89
3.6. References	89
Chapter 4. Biomechanical Modeling of the Human Tongue	95
Maxime CALKA, Pascal PERRIER, Michel ROCHETTE and Yohan PAYAN	
4.1. Introduction.	95
4.2. Anatomy of the tongue: environment, topology and partitioning	96

4.3. State of the art on biomechanical modeling of the human tongue	98
4.4. Our 3D FE model of the human tongue	100
4.4.1. Geometry and mesh.	100
4.4.2. Constitutive laws	101
4.4.3. Boundary conditions	103
4.5. Numerical simulations	104
4.5.1. Transient simulations.	104
4.5.2. Temporal activations of tongue muscles	104
4.5.3. Tongue displacements	106
4.5.4. Tongue trajectories	106
4.6. Discussion	111
4.7. Perspective: model order reduction for real-time simulation	112
4.8. Conclusion	112
4.9. References	113

Chapter 5. Biomechanical Characterization of the Disc of the Temporomandibular Joint 117

Lara TAPPERT, Adrien BALDIT and Pawel LIPINSKI

5.1. Anatomical and geometric description of the temporomandibular joint and its discs	118
5.1.1. The temporomandibular joint	118
5.1.2. The temporomandibular joint disc	120
5.2. Biomechanics of the temporomandibular joint disc	126
5.2.1. Biomechanical tests on the temporomandibular joint disc	129
5.2.2. Simulation of the temporomandibular joint.	138
5.3. Perspectives on the study of the temporomandibular joint disc	141
5.4. References	142

Chapter 6. Biomechanics of the Intervertebral Disc 149

Pascal SWIDER

6.1. Introduction.	149
6.2. Anatomy of the spine, disc and clinical issues	150
6.2.1. Anatomy of the spine.	150
6.2.2. Disc anatomy and clinical issues	151
6.2.3. Discussion of some clinical issues	153
6.2.4. Structural mechanical properties of the IVD	156
6.2.5. Transport properties of the IVD	158

6.3. IVD modeling	159
6.4. IVD and therapeutic strategies.	160
6.5. Conclusion and outlook.	161
6.6. References	161
Chapter 7. Biomechanics of the Anterior Cruciate Ligament (ACL)	169
Cédric LAURENT	
7.1. Introduction: ACL physiology and pathologies.	169
7.1.1. Anatomy and microstructure	169
7.1.2. Function of the ACL	171
7.1.3. Clinical issues	172
7.2. Mechanical characterization of the ACL.	174
7.2.1. Ex vivo characterization of the mechanical properties of the ACL.	174
7.2.2. Definitions of physiological stresses.	176
7.3. Biomechanical modeling of the ACL	180
7.3.1. Constitutive laws	180
7.3.2. Integration into computational simulations.	183
7.4. Toward tissue engineering of the ACL.	185
7.4.1. Specifications and challenges	185
7.4.2. State of the art	186
7.4.3. Example of a solution from a computational approach	187
7.4.4. Toward the engineering of a bone–ACL–bone complex	190
7.5. References	190
Chapter 8. Mechanoregulation in Soft Biological Tissues: Application to the Development of Arterial Calcifications	203
Madge MARTIN, Claire MORIN and Stéphane AVRIL	
8.1. Introduction.	203
8.1.1. Abbreviations	203
8.1.2. Context	205
8.1.3. Wall structure in large elastic arteries	205
8.1.4. Wall mechanics in large elastic arteries	207
8.2. Mechanoregulation of arteries.	209
8.2.1. The mechanostat	209
8.2.2. Mechanotransduction by arterial cells.	211
8.2.3. Vascular mechanosome	212

8.2.4. Mechanically regulated molecules controlling vascular remodeling.	215
8.3. Biochemistry of MAC	218
8.3.1. Mechanisms of MAC.	220
8.3.2. MAC: a disruption of the mechanostat?.	223
8.3.3. Perspectives on systems biology modeling of MAC in CKD-MBD	225
8.4. Conclusion	233
8.5. References	234

Chapter 9. Biomechanics of Bone Tissue and Its Interactions with Surrounding Tissues

Émilie SAPIN-DE BROSSES and David MITTON	247
9.1. Introduction.	247
9.2. Anatomy and physiology of bone from the macroscopic to the molecular scale	248
9.2.1. The human skeleton	248
9.2.2. Cortical bone and cancellous bones	248
9.2.3. Microstructure of the cortical and cancellous bones	249
9.2.4. Bone cells and their functions.	251
9.2.5. Bone at the molecular level	252
9.3. Bone tissue imaging and key morphological features	253
9.4. Mechanical behavior of bone and characterization methods	256
9.4.1. Storage, temperature, hydration: key factors for measuring the mechanical properties of biological tissues	256
9.4.2. Characterization of bone structures at the macroscopic scale: accessible mechanical data and implemented methodologies	257
9.4.3. Anisotropic linear elastic behavior of bone tissue	261
9.4.4. Viscoelasticity of bone tissue	264
9.4.5. Bone tissue damage and rupture mechanics	265
9.5. Interactions of bone tissue with surrounding tissues, and clinical implications	266
9.5.1. Bone marrow interface: involvement in osteoporosis and bone tumors	266
9.5.2. Subchondral bone: a major player in the evolution of osteoarthritis	267
9.6. Conclusion and outlook.	270
9.7. References	271

Conclusion	279
Cédric LAURENT
