INTRODUCTION	ix
CHAPTER 1. FATNESS OF TAIL	1
1.1. Fat tail heuristics	1
1.2. History and data	4
1.2.1. US flood insurance claims	4
1.2.2. US crop loss	5
1.2.3. US damages and fatalities from natural disasters	5
1.2.4. US hospital discharge bills	6
1.2.5. G-Econ data	6
1.3. Diagnostics for heavy-tailed phenomena	6
1.3.1. Historical averages	7
1.3.2. Records	8
1.3.3. Mean excess	11
1.3.4. Sum convergence: self-similar or normal	12
1.3.5. Estimating the tail index	15
1.3.6. The obesity index	20
1.4. Relation to reliability theory	24
1.5. Conclusion and overview of the technical chapters	25

CHAPTER 2. ORDER STATISTICS	27
2.1. Distribution of order statistics	27
2.2. Conditional distribution	32
2.3. Representations for order statistics	33
2.4. Functions of order statistics	36
2.4.1. Partial sums	36
2.4.2. Ratio between order statistics	37
CHAPTER 3. RECORDS	41
3.1. Standard record value processes	41
3.2. Distribution of record values	42
3.3. Record times and related statistics	44
3.4. k -records	46
CHAPTER 4. REGULARLY VARYING AND SUBEXPONENTIAL DISTRIBUTIONS	49
4.1. Classes of heavy-tailed distributions	50
4.1.1. Regularly varying distribution functions	50
4.1.2. Subexponential distribution functions	55
4.1.3. Related classes of heavy-tailed distributions	58
4.2. Mean excess function	59
4.2.1. Properties of the mean excess function	60
CHAPTER 5. INDICES AND DIAGNOSTICS OF TAIL HEAVINESS	65
5.1. Self-similarity	66
5.1.1. Distribution of the ratio between order statistics	69
5.2. The ratio as index	76
5.3. The obesity index	80
5.3.1. Theory of majorization	85
5.3.2. The obesity index of selected data sets	91

CHAPTER 6. DEPENDENCE	95
6.1. Definition and main properties	95
6.2. Isotropic distributions	96
6.3. Pseudo-isotropic distributions	100
6.3.1. Covariation as a measure of dependence for essentially heavy-tail jointly pseudo-isotropic variables	104
6.3.2. Codifference	109
6.3.3. The linear regression model for essentially heavy-tail distribution	110
CONCLUSIONS AND PERSPECTIVES	115
BIBLIOGRAPHY	119
INDEX	123
