

Table of Contents

Preface	xi
Chapter 1. Metallurgical Thermochemistry	1
1.1. Introduction.	1
1.2. Quantities characterizing the state of a system and its evolution	3
1.2.1. The types of operations	3
1.2.2. Stoichiometric description of a chemical system	4
1.2.3. Evolution of a system's state: degree of advancement of a reaction.	6
1.2.4. Characteristic quantities of a phase's composition	11
1.3. Thermodynamic fundamentals of reactions	16
1.3.1. Reaction enthalpy.	16
1.3.2. Gibbs free energy of a system, affinity of a reaction and chemical potential of a component	18
1.3.3. Expressions of the chemical potential and activities of a component.	21
1.3.4. Affinity of a reaction: law of mass action (thermodynamic modeling of a process).	28
1.3.5. Applications	32
1.4. Phase diagrams.	36
1.4.1. Binary phase diagrams.	36
1.4.2. Ternary phase diagrams	36
1.5. Bibliography	39
Chapter 2. Oxides, Sulfides, Chlorides and Carbides	41
2.1. Introduction.	41
2.2. Metal-oxygen/metal-sulfur systems activities in the intermediate phases	42

2.2.1. Phase diagrams	42
2.2.2. Component activities in the intermediate phases	46
2.3. Standard Gibbs free energy: temperature diagrams for oxides – Ellingham-Richardson diagrams	51
2.3.1. Stoichiometric oxides	51
2.3.2. Unstoichiometric compounds	54
2.3.3. Thermodynamic data for the reduction of oxides by a reducing gas	58
2.4. Thermodynamic data for sulfides and chlorides	58
2.4.1. Ellingham-Richardson diagram for sulfides	58
2.4.2. Stability diagrams for the (M-O-S) systems	60
2.4.3. Ellingham-Richardson diagram for chlorides	62
2.4.4. Stability diagrams of M-O ₂ -Cl ₂ systems	62
2.5. Metal-carbon phase diagrams and the Ellingham-Richardson diagram for carbides	63
2.6. Carbon and carbon oxide reactions	67
2.6.1. Oxidation reactions	67
2.6.2. Boudouard's reaction	68
2.6.3. The different types of coal	70
2.7. Bibliography	71
Chapter 3. Metal Solutions, Slags and Mattes.	73
3.1. Introduction.	73
3.2. Metal solutions.	74
3.2.1. Phase diagrams and activities of liquid alloys components	74
3.2.2. Activities and solubilities of metalloids in metal solutions	83
3.2.3. Solubility and precipitation of oxide and sulfide compounds in metals	92
3.3. Mattes	93
3.3.1. Structure and physical properties of sulfide melts (mattes)	93
3.3.2. Thermodynamic data for the binary Fe-S, Ni-S, Cu-S and Pb-S systems	95
3.3.3. Thermodynamic data of ternary mattes	97
3.3.4. Thermodynamic data for M-O-S systems.	99
3.4. Slags	106
3.4.1. Structure and physical properties.	106
3.4.2. Phase diagrams and activities.	110
3.4.3. Phase diagrams and activities of oxide mixtures forming the basis of metallurgical slags CaO-SiO ₂ -Al ₂ O ₃ -MgO	111
3.4.4. Phase diagrams and activities of mixtures of CaO-SiO ₂ -Al ₂ O ₃ -MgO oxides and reducible (iron, manganese and chrome) oxides	115
3.5. Bibliography	127

Chapter 4. Aqueous Electrolytic Solutions and Salt Melts	131
4.1. Introduction.	131
4.2. Thermodynamics of aqueous electrolyte solutions.	131
4.2.1. Chemical potentials and activities of the components of electrolyte aqueous solutions.	132
4.2.2. Aqueous solutions of acids and bases	138
4.2.3. Aqueous solutions of metallic salts: complexation and speciation	148
4.2.4. Solubility of oxides and hydroxides	156
4.2.5. Solubility of salts	165
4.2.6. Solubility of gases in an aqueous solution	171
4.3. Thermodynamics of salt melts (fluxes)	173
4.3.1. Compositions and physical properties of fluxes	174
4.3.2. Thermodynamic properties	174
4.3.3. Solubility of oxides in halides	177
4.4. Bibliography	179
Chapter 5. Reaction Kinetics	183
5.1. Introduction.	183
5.2. Rate of a chemical reaction	184
5.2.1. Definitions	184
5.2.2. Expressions of the rate of a chemical reaction	186
5.3. Homogeneous precipitation	189
5.3.1. Thermodynamics of primary nucleation	190
5.3.2. Nucleation and primary particle formation processes.	191
5.3.3. Secondary nucleation	193
5.4. Kinetics and mechanism of heterogeneous reactions	194
5.4.1. Mechanism of heterogeneous chemical reactions	194
5.4.2. Rates of heterogeneous reactions in fluid-solid systems	195
5.4.3. Experimental rates of gasification reactions	197
5.4.4. Experimental rates of oxide and sulfide dissolution by acid-base reactions	202
5.4.5. Rates of heterogeneous chemical reactions in fluid-fluid systems.	206
5.4.6. Experimental rates of transfer processes	207
5.4.7. Experimental rates of gas-liquid reactions	209
5.5. Reaction rates for in situ conversion of a solid particle	211
5.5.1. Reduction of an oxide in solid state by carbon monoxide or hydrogen	211
5.5.2. Roasting of a zinc sulfide particle	214
5.6. Heterogeneous precipitation	215
5.6.1. Deposition mechanism.	216

5.6.2. Silicon deposition by heterogeneous thermal decomposition of silane	216
5.7. Bibliography	217
Chapter 6. Transport Kinetics	219
6.1. Introduction.	219
6.1.1. Identification of the rate-limiting step.	222
6.2. Equations of change and relationships between diffusion fluxes and driving forces.	223
6.2.1. Equations of change (in terms of the fluxes).	223
6.2.2. Relationships between diffusion fluxes, driving forces and transport properties.	225
6.3. Interphase mass or heat transport (mass and heat transfer)	227
6.3.1. Definitions of heat and mass transfer coefficients.	227
6.3.2. Kinetics of diffusion-controlled processes	229
6.4. Mass and heat transfer coefficients	236
6.4.1. Mass and heat transfer (across a phase boundary) between two semi-infinite and stagnant phases	237
6.4.2. Heat and mass transfer between a flat wall and a fluid flowing along the flat surface in forced convection: boundary layer theory	239
6.4.3. Heat and mass transfer between particles, drops or bubbles and a continuous fluid phase	243
6.5. Overall kinetics of extraction processes under mixed control	247
6.5.1. Extraction process-type gasification.	247
6.5.2. Transfer process-type solvent extraction	249
6.5.3. Note on the rule of addition of resistances acting in series.	250
6.6. Bibliography	251
Chapter 7. Particulate Kinetics	253
7.1. Introduction.	253
7.2. Gasification/leaching of a particle	254
7.2.1. Non-porous particles	254
7.2.2. Porous particles (pellets)	259
7.3. Heterogeneous precipitation: growth rate of the particles.	263
7.4. <i>In situ</i> conversion of a solid particle	264
7.4.1. Non-porous particle: the shrinking unreacted core model	265
7.4.2. In situ conversion of a porous particle: the grain pellet model	269
7.5. Conversion of a particle undergoing strong exo- or endothermic chemical reactions	270
7.5.1. Exothermic chemical reactions	270
7.5.2. Endothermic chemical reactions	275

7.6. Transfer processes between two fluid phases, one phase being dispersed (as drops or bubbles) in the second phase	276
7.6.1. Heat transfer	276
7.6.2. Mass transfer	277
7.6.3. Hydrogen removal from liquid steel bath by injection of inert gas bubbles	278
7.7. Bibliography	280
Chapter 8. Electrochemical Reactions	283
8.1. Overview of electrochemical processes	283
8.2. Equilibrium electric potential of an elementary electrochemical reaction	285
8.2.1. Nernst equation	285
8.2.2. Electrode potentials in aqueous solutions.	288
8.2.3. Equilibrium potential metal/ion $E_{M/M^{z+}}$ in molten salts	292
8.3. Electrochemical equilibria of metals and metalloids (Pourbaix diagrams).	292
8.3.1. Diagram of electrochemical equilibria of water	293
8.3.2. Pourbaix diagram for metal-water systems.	294
8.3.3. Pourbaix diagram for the Fe, Cu and Zn-Cl-H ₂ O systems	300
8.3.4. Pourbaix diagrams for the M-NH ₃ -H ₂ O systems	302
8.3.5. Pourbaix diagrams for the M-HCN-H ₂ O systems	304
8.3.6. Pourbaix diagrams for the M-S-H ₂ O systems	305
8.4. Electrochemical kinetics	306
8.4.1. Rate of an elementary electrochemical reaction: Tafel's Law.	307
8.4.2. Diffusion-controlled rate of an elementary electrochemical reaction.	312
8.4.3. Rate of a redox chemical reaction	313
8.5. Redox electrochemical reactions	314
8.5.1. Cementation or displacement reaction	315
8.5.2. Leaching (dissolution) of metals	319
8.6. Bibliography	322
List of Symbols	325
Index	337
Summaries of Other Volumes.	345
