PREFACE	vii
BASIC NOTATION	ix
LIST OF STATEMENTS	xi
CHAPTER 1. GENERAL THEORY OF STOCHASTIC PROCESSES	1
1.1. Stochastic basis and stochastic processes	1
1.2. Stopping times	5
1.3. Measurable, progressively measurable, optional and predictable σ -algebras	11
1.4. Predictable stopping times	22
1.5. Totally inaccessible stopping times	30
1.6. Optional and predictable projections	36
CHAPTER 2. MARTINGALES AND PROCESSES WITH FINITE VARIATION	41
2.1. Elements of the theory of martingales	41
2.2. Local martingales	52
2.3. Increasing processes and processes with finite variation	62
2.4. Integrable increasing processes and processes with integrable variation. Doléans measure	68
2.5. Locally integrable increasing processes and processes with locally integrable variation	82
2.6. Doob–Meyer decomposition	93
2.7. Square-integrable martingales	98
2.8. Purely discontinuous local martingales	112

CHAPTER 3. STOCHASTIC INTEGRALS	121
3.1. Stochastic integrals with respect to local martingales	121
3.2. Semimartingales. Stochastic integrals with respect to semimartingales: locally bounded integrands. Itô's formula	136
3.3. Stochastic exponential	148
3.4. Stochastic integrals with respect to semimartingales: the general case	155
3.5. σ -martingales	162
APPENDIX	169
BIBLIOGRAPHICAL NOTES	179
