

## Table of Contents

<b>Preface</b> . . . . .	9
<b>Specific Notations</b> . . . . .	13
<b>PART I. Tools and Spectral Analysis</b> . . . . .	15
<b>Chapter 1. Fundamentals</b> . . . . .	17
Francis CASTANIÉ	
1.1. Classes of signals . . . . .	17
1.1.1. Deterministic signals . . . . .	17
1.1.2. Random signals . . . . .	20
1.2. Representations of signals . . . . .	23
1.2.1. Representations of deterministic signals . . . . .	23
1.2.1.1. Complete representations . . . . .	23
1.2.1.2. Partial representations . . . . .	25
1.2.2. Representations of random signals. . . . .	27
1.2.2.1. General approach . . . . .	27
1.2.2.2. 2 <sup>nd</sup> order representations . . . . .	28
1.2.2.3. Higher order representations . . . . .	32
1.3. Spectral analysis: position of the problem. . . . .	33
1.4. Bibliography . . . . .	35
<b>Chapter 2. Digital Signal Processing</b> . . . . .	37
Éric LE CARPENTIER	
2.1. Introduction. . . . .	37
2.2. Transform properties . . . . .	38
2.2.1. Some useful functions and series. . . . .	38
2.2.2. Fourier transform . . . . .	43
2.2.3. Fundamental properties . . . . .	47

6 Spectral Analysis

2.2.4. Convolution sum . . . . .	48
2.2.5. Energy conservation (Parseval's theorem) . . . . .	50
2.2.6. Other properties . . . . .	51
2.2.7. Examples . . . . .	53
2.2.8. Sampling . . . . .	55
2.2.9. Practical calculation, FFT . . . . .	59
2.3. Windows . . . . .	62
2.4. Examples of application . . . . .	71
2.4.1. LTI systems identification . . . . .	71
2.4.2. Monitoring spectral lines . . . . .	75
2.4.3. Spectral analysis of the coefficient of tide fluctuation . . . . .	76
2.5. Bibliography . . . . .	78
<b>Chapter 3. Estimation in Spectral Analysis</b> . . . . .	<b>79</b>
Olivier BESSON and André FERRARI	
3.1. Introduction to estimation . . . . .	79
3.1.1. Formalization of the problem . . . . .	79
3.1.2. Cramér-Rao bounds . . . . .	81
3.1.3. Sequence of estimators . . . . .	86
3.1.4. Maximum likelihood estimation . . . . .	89
3.2. Estimation of 1 <sup>st</sup> and 2 <sup>nd</sup> order moments . . . . .	92
3.3. Periodogram analysis . . . . .	97
3.4. Analysis of estimators based on $\hat{c}_{xx}(m)$ . . . . .	101
3.4.1. Estimation of parameters of an AR model . . . . .	103
3.4.2. Estimation of a noisy cisoid by MUSIC . . . . .	106
3.5. Conclusion . . . . .	108
3.6. Bibliography . . . . .	108
<b>Chapter 4. Time-Series Models</b> . . . . .	<b>111</b>
Francis CASTANIÉ	
4.1. Introduction. . . . .	111
4.2. Linear models . . . . .	113
4.2.1. Stationary linear models . . . . .	113
4.2.2. Properties . . . . .	116
4.2.2.1. Stationarity . . . . .	116
4.2.2.2. Moments and spectra . . . . .	117
4.2.2.3. Relation with Wold's decomposition . . . . .	119
4.2.3. Non-stationary linear models . . . . .	120
4.3. Exponential models . . . . .	123
4.3.1. Deterministic model . . . . .	123
4.3.2. Noisy deterministic model . . . . .	124
4.3.3. Models of random stationary signals . . . . .	125
4.4. Non-linear models . . . . .	126
4.5. Bibliography . . . . .	126

<b>PART II. Non-Parametric Methods</b> . . . . .	129
<b>Chapter 5. Non-Parametric Methods</b> . . . . .	131
Éric LE CARPENTIER	
5.1. Introduction. . . . .	131
5.2. Estimation of the power spectral density . . . . .	136
5.2.1. Filter bank method . . . . .	136
5.2.2. Periodogram method . . . . .	139
5.2.3. Periodogram variants. . . . .	142
5.3. Generalization to higher order spectra . . . . .	146
5.4. Bibliography . . . . .	148
<b>PART III. Parametric Methods</b> . . . . .	149
<b>Chapter 6. Spectral Analysis by Stationary Time Series Modeling</b> . . . . .	151
Corinne MAILHES and Francis CASTANIÉ	
6.1. Parametric models . . . . .	151
6.2. Estimation of model parameters. . . . .	153
6.2.1. Estimation of AR parameters . . . . .	153
6.2.2. Estimation of ARMA parameters . . . . .	160
6.2.3. Estimation of Prony parameters . . . . .	161
6.2.4. Order selection criteria. . . . .	164
6.3. Properties of spectral estimators produced . . . . .	167
6.4. Bibliography . . . . .	172
<b>Chapter 7. Minimum Variance</b> . . . . .	175
Nadine MARTIN	
7.1. Principle of the MV method . . . . .	179
7.2. Properties of the MV estimator . . . . .	182
7.2.1. Expressions of the MV filter . . . . .	182
7.2.2. Probability density of the MV estimator . . . . .	186
7.2.3. Frequency resolution of the MV estimator . . . . .	192
7.3. Link with the Fourier estimators . . . . .	193
7.4. Link with a maximum likelihood estimator . . . . .	196
7.5. Lagunas methods: normalized and generalized MV . . . . .	198
7.5.1. Principle of normalized MV . . . . .	198
7.5.2. Spectral refinement of the NMV estimator. . . . .	200
7.5.3. Convergence of the NMV estimator . . . . .	202
7.5.4. Generalized MV estimator . . . . .	204
7.6. The CAPNORM estimator. . . . .	206
7.7. Bibliography . . . . .	209

<b>Chapter 8. Subspace-based Estimators</b> . . . . .	213
Sylvie MARCOS	
8.1. Model, concept of subspace, definition of high resolution . . . . .	213
8.1.1. Model of signals . . . . .	213
8.1.2. Concept of subspaces . . . . .	214
8.1.3. Definition of high-resolution . . . . .	216
8.1.4. Link with spatial analysis or array processing . . . . .	217
8.2. MUSIC . . . . .	217
8.2.1. Pseudo-spectral version of MUSIC . . . . .	220
8.2.2. Polynomial version of MUSIC . . . . .	221
8.3. Determination criteria of the number of complex sine waves . . . . .	223
8.4. The <i>MinNorm</i> method . . . . .	224
8.5. “Linear” subspace methods . . . . .	226
8.5.1. The linear methods . . . . .	226
8.5.2. The propagator method . . . . .	226
8.5.2.1. Propagator estimation using least squares technique . . . . .	228
8.5.2.2. Determination of the propagator in the presence of a white noise. . . . .	229
8.6. The ESPRIT method . . . . .	232
8.7. Illustration of subspace-based methods performance . . . . .	235
8.8. Adaptive research of subspaces . . . . .	236
8.9. Bibliography . . . . .	242
 <b>Chapter 9. Introduction to Spectral Analysis of Non-Stationary Random Signals</b> . . . . .	245
Corinne MAILHES and Francis CASTANIÉ	
9.1. Evolutive spectra . . . . .	246
9.1.1. Definition of the “evolutive spectrum” . . . . .	246
9.1.2. Evolutive spectrum properties . . . . .	247
9.2. Non-parametric spectral estimation. . . . .	248
9.3. Parametric spectral estimation. . . . .	249
9.3.1. Local stationary postulate . . . . .	250
9.3.2. Elimination of a stationary condition . . . . .	251
9.3.3. Application to spectral analysis . . . . .	254
9.4. Bibliography . . . . .	255
 <b>List of Authors</b> . . . . .	259
 <b>Index</b> . . . . .	261
