FOREWORD	ix
INTRODUCTION	xiii
CHAPTER 1. CRASH COURSE ON REGULAR LANGUAGES	1
1.1. Automata and regular languages	2
1.2. Adjacency matrix	14
1.3. Multidimensional alphabet	17
1.4. Two pumping lemmas	19
1.5. The minimal automaton	23
1.6. Some operations preserving regularity	29
1.7. Links with automatic sequences and recognizable sets	32
1.8. Polynomial regular languages	37
1.8.1. Tiered words	40
1.8.2. Characterization of regular languages of polynomial growth	43
1.8.3. Growing letters in morphic words	49
1.9. Bibliographic notes and comments	51
CHAPTER 2. A RANGE OF NUMERATION SYSTEMS	55
2.1. Substitutive systems	58

2.2. Abstract numeration systems	67
2.2.1. Generalization of Cobham's theorem on automatic sequences	74
2.2.2. Some properties of abstract numeration systems	86
2.3. Positional numeration systems	89
2.4. Pisot numeration systems	98
2.5. Back to β -expansions	107
2.5.1. Representation of real numbers	107
2.5.2. Link between representations of integers and real numbers	112
2.5.3. Ito–Sadahiro negative base systems	114
2.6. Miscellaneous systems	117
2.7. Bibliographical notes and comments	123

CHAPTER 3. LOGICAL FRAMEWORK AND DECIDABILITY ISSUES	129
3.1. A glimpse at mathematical logic	132
3.1.1. Syntax	132
3.1.2. Semantics	136
3.2. Decision problems and decidability	140
3.3. Quantifier elimination in Presburger arithmetic	143
3.3.1. Equivalent structures	143
3.3.2. Presburger's theorem and quantifier elimination	146
3.3.3. Some consequences of Presburger's theorem	150
3.4. Büchi's theorem	156
3.4.1. Definable sets	157
3.4.2. A constructive proof of Büchi's theorem	159
3.4.3. Extension to Pisot numeration systems	168
3.5. Some applications	170
3.5.1. Properties about automatic sequences	170
3.5.2. Overlap-freeness	172
3.5.3. Abelian unbordered factors	173
3.5.4. Periodicity	177

3.5.5. Factors	178
3.5.6. Applications to Pisot numeration systems	180
3.6. Bibliographic notes and comments	183
CHAPTER 4. LIST OF SEQUENCES	187
BIBLIOGRAPHY	193
INDEX	231
SUMMARY OF VOLUME 1	235
