<b>INTRODUCTION</b> . . . . .	ix
<b>CHAPTER 1. THREE-DIMENSIONAL MODELING</b> . . . . .	1
1.1. Rotation matrices . . . . .	2
1.1.1. Definition . . . . .	2
1.1.2. Rotation vector . . . . .	3
1.1.3. Adjoint . . . . .	4
1.1.4. Coordinate system change . . . . .	6
1.2. Euler angles . . . . .	8
1.2.1. Definition . . . . .	8
1.2.2. Derivative of an Euler matrix . . . . .	9
1.2.3. Rotation vector of an Euler matrix . . . . .	10
1.3. Kinematic model of a solid robot . . . . .	11
1.4. Exercises . . . . .	14
1.5. Corrections . . . . .	28
<b>CHAPTER 2. FEEDBACK LINEARIZATION</b> . . . . .	45
2.1. Controlling an integrator chain . . . . .	45
2.1.1. Proportional-derivative controller . . . . .	46
2.1.2. Proportional-integral-derivative controller . . . . .	47
2.2. Introductory example . . . . .	48
2.3. Principle of the method . . . . .	50
2.3.1. Principle . . . . .	50
2.3.2. Relative degree . . . . .	52
2.3.3. Differential delay matrix . . . . .	53
2.3.4. Singularities . . . . .	54
2.4. Cart . . . . .	56

---

2.4.1. First model	56
2.4.2. Second model	58
2.5. Controlling a tricycle	61
2.5.1. Speed and heading control	61
2.5.2. Position control	63
2.5.3. Choosing another output	63
2.6. Sailboat	64
2.6.1. Polar curve	66
2.6.2. Differential delay	67
2.6.3. The method of feedback linearization	67
2.6.4. Polar curve control	70
2.7. Kinematic model and dynamic model	71
2.7.1. Principle	71
2.7.2. Example of the inverted rod pendulum	73
2.7.3. Servo-motors	76
2.8. Exercises	77
2.9. Corrections	85
<b>CHAPTER 3. MODEL-FREE CONTROL</b>	<b>101</b>
3.1. Model-free control of a robot cart	102
3.1.1. Proportional heading and speed controller	102
3.1.2. Proportional-derivative heading controller	104
3.2. Skate car	106
3.2.1. Model	106
3.2.2. Sinusoidal control	108
3.2.3. Maximum thrust control	109
3.2.4. Simplification of the fast dynamics	111
3.3. Sailboat	114
3.3.1. Problem	114
3.3.2. Controller	116
3.3.3. Navigation	121
3.3.4. Experiment	122
3.4. Exercises	125
3.5. Corrections	133
<b>CHAPTER 4. GUIDANCE</b>	<b>141</b>
4.1. Guidance on a sphere	141
4.2. Path planning	145
4.2.1. Simple example	145
4.2.2. Bézier polynomials	146
4.3. Voronoi diagram	148

4.4. Artificial potential field method . . . . .	149
4.5. Exercises . . . . .	151
4.6. Corrections . . . . .	157
<b>CHAPTER 5. INSTANTANEOUS LOCALIZATION . . . . .</b>	<b>171</b>
5.1. Sensors . . . . .	172
5.2. Goniometric localization . . . . .	176
5.2.1. Formulation of the problem . . . . .	176
5.2.2. Inscribed angles . . . . .	177
5.2.3. Static triangulation of a plane robot . . . . .	178
5.2.4. Dynamic triangulation . . . . .	179
5.3. Multilateration . . . . .	181
5.4. Exercises . . . . .	182
5.5. Corrections . . . . .	187
<b>CHAPTER 6. IDENTIFICATION . . . . .</b>	<b>197</b>
6.1. Quadratic functions . . . . .	197
6.1.1. Definition . . . . .	198
6.1.2. Derivative of a quadratic form . . . . .	198
6.1.3. Eigenvalues of a quadratic function . . . . .	199
6.1.4. Minimizing a quadratic function . . . . .	199
6.2. The least squares method . . . . .	201
6.2.1. Linear case . . . . .	201
6.2.2. Nonlinear case . . . . .	202
6.3. Exercises . . . . .	203
6.4. Corrections . . . . .	207
<b>CHAPTER 7. KALMAN FILTER . . . . .</b>	<b>219</b>
7.1. Covariance matrices . . . . .	219
7.1.1. Definitions and interpretations . . . . .	219
7.1.2. Properties . . . . .	221
7.1.3. Confidence ellipse . . . . .	222
7.1.4. Generating Gaussian random vectors . . . . .	224
7.2. Unbiased orthogonal estimator . . . . .	226
7.3. Application to linear estimation . . . . .	230
7.4. Kalman filter . . . . .	231
7.5. Kalman smoother . . . . .	234
7.6. Exercises . . . . .	235
7.7. Corrections . . . . .	256
<b>BIBLIOGRAPHY . . . . .</b>	<b>295</b>
<b>INDEX . . . . .</b>	<b>299</b>
