INTRODUCTION	xi
François TEMPLIER	
CHAPTER 1. OLED: THEORY AND PRINCIPLES	1
Tony MAINDRON	
1.1. Organic light-emitting device: a brief history	2
1.2. Principles of OLED operation.	3
1.3. Organic semiconductor material categories	4
1.3.1. Small molecules	4
1.3.2. Polymers	5
1.3.3. Deposition technique description	5
1.4. Organic semiconductors: theory	7
1.4.1. Band theory in organic chemistry	7
1.4.2. Differences from classical semiconductors	8
1.4.3. Electronic transport model in amorphous organic solids.	10
1.5. OLEDs electrical characteristics	12
1.6. OLED: different structure types	15
1.6.1. Direct and inverted diodes	15
1.6.2. Through substrate emitting diode and top surface emitting diode.	15
1.6.3. Heterojunction diode and band engineering.	16
1.6.4. Electrical doping	16
1.6.5. Light extraction	18
1.6.6. OLED efficiency	21
1.7. OLED stability and lifetime: encapsulation issue	22
1.8. Specificities of OLED for microdisplays.	28
1.9. Bibliography	30

CHAPTER 2. OVERVIEW OF OLED DISPLAYS.	35
François TEMPLIER	
2.1. Passive-matrix OLED displays	35
2.1.1. Main characteristics	35
2.1.2. Applications	36
2.1.3. Market and actors	37
2.1.4. Limitations/future of PMOLED	40
2.2. Active-matrix AMOLED displays	40
2.2.1. Main characteristics	40
2.2.2. Applications: small and medium-size AMOLED.	40
2.2.3. Applications: large-size OLED displays.	43
2.3. Trends in OLED displays: flexible and transparent	46
2.3.1. Flexible and transparent PMOLED displays	46
2.3.2. Flexible AMOLED displays	48
2.4. OLED lighting	49
2.5. Microdisplays.	50
2.6. Bibliography	51
CHAPTER 3. OLED CHARACTERIZATION.	53
David VAUFREY	
3.1. Electronic properties of organic semiconductors	53
3.1.1. HOMO and LUMO level determination.	54
3.1.2. Mobility measurement	56
3.2. Optical properties of organic semiconductors	62
3.2.1. Spectrometry.	62
3.2.2. Photoluminescence	65
3.3. Device characterization	67
3.3.1. Electrical characterization	67
3.3.2. Radiometry versus photometry and colorimetry	72
3.3.3. Electro-optical characterization	76
3.3.4. Ageing	80
3.4. OLED microdisplay characterization.	83
3.4.1. OLED microdisplay specific measurements	83
3.5. Bibliography	90
CHAPTER 4. 5-TOOLS AND METHODS FOR ELECTRO-OPTIC SIMULATION	95
Karim BOUZID	
4.1. Electro-optic simulation presentation.	95
4.1.1. Objectives	95

4.1.2. Potential gains	96
4.1.3. Available software solutions	96
4.2. Optical simulation	96
4.2.1. Bottom-emission OLEDs	97
4.2.2. Top-emission OLEDs	98
4.3. Electrical simulation	107
4.3.1. Potential gain	107
4.3.2. Simulation types	107
4.3.3. Full OLED stack simulation: example and analysis	112
4.3.4. Analysis example	113
4.4. Microdisplay simulation limitations	114
4.4.1. Electrical/optical crosstalk simulation	114
4.4.2. Combined electro-optical outputs	116
4.4.3. Limitations of accuracy for microdisplays	116
4.5. Bibliography	117
CHAPTER 5. ADDRESSING OLED MICRODISPLAYS	119
Philippe LEROY	
5.1. Passive matrix OLED display	120
5.2. Active matrix OLED displays	124
5.2.1. General considerations for active matrix addressing	124
5.2.2. Two-TFT (2-TFT) pixel circuit	128
5.2.3. Threshold compensation method	132
5.2.4. AMOLED pixel circuit and image writing	138
5.3. Addressing OLED microdisplays	144
5.3.2. Pixel electrode circuits and driving operation	146
5.3.3. Innovative pixel circuit on silicon backplane	153
5.4. Bibliography	156
CHAPTER 6. OLED MICRODISPLAY FABRICATION	159
Christophe PRAT, Tony MAINDRON, Rigo HEROLD and François TEMPLIER	
6.1. Fabrication of CMOS active matrix	159
6.1.1. General considerations	159
6.1.2. Specificities of the circuit	160
6.1.3. Choice of metal electrodes	161
6.1.4. Pixel pitch and fill factor	162
6.1.5. Choice of baseline CMOS circuit	163
6.2. OLED process on CMOS circuit	163
6.2.1. Cluster tool and process	163
6.2.2. Evaporation sources	165
6.2.3. Load-lock chamber	169

6.2.4. Plasma treatment	170
6.2.5. Deposition process	170
6.2.6. Thickness, uniformity control and spitting	174
6.2.7. Shadow mask	180
6.2.8. Buffer chamber	180
6.3. Encapsulation process	180
6.3.1. Encapsulation tools for production.	180
6.3.2. Encapsulation tools for pilot line/ R&D	181
6.4. Color: different approaches and associated processes.	183
6.4.1. Color management	183
6.4.2. Color filter assembly	183
6.4.3. Color filters on OLED	185
6.5. Packaging	186
6.6. Display testing and performances.	186
6.7. Electronics	187
6.7.1. Data and configuration interface	187
6.7.2. Packaging and mounting of microdisplays	190
6.8. Process and performance evolutions	192
6.9. Bibliography	193
CHAPTER 7. APPLICATIONS OF OLED MICRODISPLAYS	195
Khaled SARAYEDDINE, Ersun KARTAL and François TEMPLIER	
7.1. Introduction.	195
7.2. Head-mounted displays and informative glasses for consumer and professional applications	196
7.2.1. General requirements for HMD for consumer and professional markets.	196
7.2.2. Optical system architecture for near-to-eye display	199
7.2.3. Evolution and challenges for near-to-eye wearable display systems	217
7.3. Electronic viewfinder embedded into a camera/camcorder	218
7.3.1. Introduction and general requirements.	219
7.3.2. Optics.	220
7.3.3. Evolution of view finders.	223
7.4. Other display systems with OLED microdisplays.	224
7.4.1. The OLED microdisplay for pico-projectors	224
7.4.2. Bi-directionnal OLED microdisplay for see-through system	226
7.5. Bibliography	229

CHAPTER 8. OLED MICRODISPLAYS PRESENT AND FUTURE	231
François TEMPLIER and Karim BOUZID	
8.1. Present actors of OLED microdisplays.	231
8.2. Evolution and future developments for OLED microdisplays	232
8.2.1. Introduction	232
8.2.2. Luminance and lifetime.	232
8.2.3. Voltage delta figure of merit	235
8.2.4. Color coverage.	236
8.2.5. Pixel pitch size.	238
8.2.6. Cost.	239
8.3. Disruptive emissive microdisplays	239
8.3.1. Transparent OLED microdisplays	239
8.3.2. Other emissive microdisplays: high-brightness GaN-based LED arrays	240
8.4. Bibliography	245
