Introduction	xvii
Nicolas MONMARCHÉ, Frédéric GUINAND and Patrick SIARRY	
Chapter 1. From Real Ants to Artificial Ants	1
Alain LENOIR and Nicolas MONMARCHÉ	
1.1. The real ants	1
1.2. Collective intelligence and self-organization	7
1.2.1. Trails	8
1.2.2. Sorting objects	9
1.2.3. Activities for digging the nest	11
1.2.4. Aggregation of individuals	11
1.2.5. Modeling the colonial odor	12
1.3. Artificial ants	13
1.4. Bibliography	16
Chapter 2. General Principles of Ant Colony Combinatorial Problem Solving	19
Antoine DUTOT, Frédéric GUINAND, Damien OLIVIER and Yoann PIGNÉ	
2.1. From carbon to silicon	19
2.2. From problem to structure	21
2.2.1. Route	21
2.2.2. Single and multiple paths	22
2.2.3. Partitions	24
2.2.4. Conclusion	25
2.3. From system to structure	25
2.3.1. Ants and random walks	27
2.3.2. Generating a path	27
2.3.3. Generating multiple paths	31

2.3.4. Generating partitions	34
2.3.5. Conclusion	38
2.4. Optimize: guide the formation of structures	39
2.4.1. Visibility	40
2.4.2. Other mechanisms	40
2.4.3. Neighborhood structure	41
2.5. Conclusion	42
2.6. Appendix: <i>GraphStream</i>	42
2.7. Bibliography	43
Chapter 3. General Survey of Combinatorial Problems Treated by Artificial Ants	45
Antoine DUTOT and Yoann PIGNÉ	
3.1. The main approaches based on ants	45
3.1.1. The ACO family	46
3.1.2. Ant-based control, faithful to the ant metaphor	53
3.2. The different classes of problems tackled	54
3.2.1. Assignment problems	54
3.2.2. Scheduling problems	57
3.2.3. Partitioning problems	57
3.3. The multiobjective problems, dynamics and uncertainty	59
3.3.1. Multiobjective problems	60
3.3.2. Uncertainty and dynamics	61
3.4. Conclusion	69
3.5. Bibliography	70
Chapter 4. Artificial Ants for Continuous Optimization	73
Patrick SIARRY, Johann DRÉO and Nicolas MONMARCHÉ	
4.1. Direct modeling of ants' behavior	74
4.1.1. CACO algorithm	74
4.1.2. API algorithm	76
4.1.3. CIAC and HCIAC algorithms	79
4.2. Algorithms based on binary discretization	80
4.2.1. ACO-canonical algorithm	81
4.2.2. AS_b (BAS) algorithm	83
4.2.3. ACS_b (binary ant colony system) algorithm	83
4.2.4. AAC algorithm	85
4.2.5. BAS algorithm	85
4.2.6. API-HMM algorithm	86
4.3. Algorithms based on probabilistic sampling	86
4.3.1. ACO-continuous algorithm	86
4.3.2. CACS algorithm	87
4.3.3. $ACO_{\mathbb{R}}$ algorithm	88

4.3.4. MACACO algorithm	89
4.3.5. APS algorithm	90
4.3.6. DACO algorithm	90
4.3.7. CANDO algorithm	91
4.4. Hybrid approaches	92
4.4.1. Ants and artificial evolution	92
4.4.2. ACO-LM algorithm	92
4.4.3. Improved ACO algorithm	93
4.4.4. COAC algorithm	93
4.4.5. PSACO algorithm	93
4.4.6. Immunity-based ACO algorithm	93
4.5. Comparison of competing approaches	93
4.6. Conclusion	94
4.7. Bibliography	95
Chapter 5. Ant Colony Optimization for Constraint-Based Configuration	99
Patrick ALBERT, Laurent HENOCQUE and Mathias KLEINER	
5.1. Introduction	99
5.1.1. Brief introduction to configuration	100
5.1.2. Formal presentation of the problem	101
5.1.3. Brief introduction to ACO	103
5.2. ACO for configuration	105
5.2.1. Construction graph	105
5.2.2. Instantiation of variables	105
5.2.3. Pheromone model	106
5.2.4. Algorithms	109
5.3. Implementation and experiments	111
5.3.1. Heuristics	111
5.3.2. Parameters	112
5.3.3. Experimental results and analysis	113
5.4. Conclusion	116
5.5. Bibliography	116
Chapter 6. Ant Colonies for the Unit Commitment Problem: From Optimization to Predictive Control	119
Guillaume SANDOU, Stéphane FONT, Sihem TEBBANI, Christian MONDON and Arnaud HIRET	
6.1. Introduction	119
6.2. Unit commitment problem	120
6.3. Solving of the unit commitment problem by an ant colony	122
6.3.1. Solving for linear costs	122
6.3.2. Coupling with a genetic algorithm	127
6.3.3. Extension to problems in real variables	131

6.4. From optimization to predictive control	133
6.4.1. Problematic	133
6.4.2. Predictive control	134
6.4.3. Application to the unit commitment problem	135
6.4.4. Simulation results	135
6.4.5. Interest of ant colony optimization for predictive control	136
6.5. Conclusion	136
6.6. Bibliography	137
Chapter 7. Ant Colony Optimization for Manufacturing	
Aluminum Bars	139
Marc GRAVEL and Caroline GAGNÉ	
7.1. Introduction	139
7.2. Scheduling the manufacturing of aluminum bars in the Alcan Company's Dubuc plant	140
7.2.1. An algorithm based on the AS for scheduling the production of aluminum bars in the Dubuc plant	142
7.2.2. An improved algorithm for scheduling the production of aluminum bars in the Dubuc plant	144
7.2.3. Compromise solutions for scheduling the production of aluminum bars in the Dubuc plant	148
7.3. Conclusion	152
7.4. Bibliography	153
Chapter 8. Ant Colony Optimization for Car Sequencing	155
Caroline GAGNÉ and Marc GRAVEL	
8.1. Introduction	155
8.2. Solving the theoretical car sequencing problem using ACO	156
8.3. Solving in the industrial CSP using ACO	162
8.4. Conclusion	171
8.5. Bibliography	172
Chapter 9. An Ant Algorithm for Measuring and Optimizing the Capacity of Railway Infrastructure	175
Xavier GANDIBLEUX, Julien JORGE, Xavier DELORME and Joaquín RODRIGUEZ	
9.1. Motivations and challenges of the problem treated	175
9.1.1. Analysis of strategies for the development of rail infrastructure	176
9.1.2. Capacity of rail infrastructure	177
9.1.3. The RECIFE project	178
9.2. Modeling	180
9.2.1. Description of parts of the real system to consider	180
9.2.2. Modeling the railway problem considered	183

9.3. Solving algorithm	185
9.3.1. Variables, solutions and pheromones	187
9.3.2. Construction of solutions	187
9.3.3. Management of pheromone tracks	188
9.3.4. Disturbance of pheromones	189
9.3.5. Self-adaptive strategy for controlling the algorithm	190
9.3.6. Local search	193
9.4. Numerical experiments	193
9.4.1. Pierrefitte–Gonesse railway node	193
9.4.2. Basis timetable considered for the study	195
9.4.3. Study 1. Feasibility of the basis timetable	196
9.4.4. Study 2. Integration of freight trains in the basis timetable	197
9.4.5. Study 3. Measurement of the absolute capacity of the railway node	199
9.5. Conclusions and prospects	200
9.6. Acknowledgments	201
9.7. Bibliography	201
Chapter 10. Artificial Ants for Magnetic Resonance	
Image Segmentation	205
Amir NAKIB, Raphaël BLANC, Hamouche OULHADJ and Patrick SIARRY	
10.1. Introduction	205
10.2. Principle of MRI	207
10.3. Importance of segmentation in MRI	208
10.4. Proposed segmentation criterion: biased intraclass variance	209
10.5. Adapting ACO to the image segmentation problem	210
10.6. Results and interpretation	212
10.6.1. Results on MRI images	212
10.6.2. Performance comparison	212
10.7. Conclusion	217
10.8. Bibliography	217
Chapter 11. Vertex Coloring Using Ant Colonies	219
Alain HERTZ and Nicolas ZUFFEREY	
11.1. Introduction	219
11.2. The vertex coloring problem (VCP)	220
11.3. Three ant colony approaches for the VCP	221
11.3.1. Each ant is a constructive algorithm	221
11.3.2. The ants walk in the graph	224
11.3.3. Each ant is a local search procedure	227
11.4. Some numerical comparisons	230
11.5. Discussion and conclusion	233
11.6. Bibliography	234

Chapter 12. Training Hidden Markov Models Using the API Ant Algorithm	237
Sébastien AUPETIT, Nicolas MONMARCHÉ and Mohamed SLIMANE	
12.1. Hidden Markov models	237
12.1.1. The coin throwing game	238
12.1.2. Definitions	239
12.1.3. Metaheuristics for the training of HMMs	242
12.2. API ant colony algorithm	243
12.2.1. The foraging strategy of <i>Pachycondyla apicalis</i> ants	244
12.2.2. The basic principles of API algorithm	245
12.2.3. Classical implementation of operator $\mathcal{O}_{\text{explo}}$ and generalization	246
12.2.4. Operator $\mathcal{O}_{\text{explo}}$ of onion skin type	251
12.3. Fitting of API metaheuristic to the training of HMMs	253
12.3.1. Adaptation of the neighborhood and layers to the problem	253
12.3.2. Experimental studies of adaptations	256
12.4. Conclusion and perspectives	259
12.5. Bibliography	261
Chapter 13. Artificial Ants for Automatic Classification	265
Amira HAMDI, Violaine ANTOINE, Nicolas MONMARCHÉ, Adel ALIMI and Mohamed SLIMANE	
13.1. Presentation of the classification problem	266
13.1.1. Context and input data	266
13.1.2. Classification methods	266
13.1.3. The problem studied	267
13.1.4. A few definitions	268
13.2. Classification methods based on a grid	269
13.2.1. What real ants do	269
13.2.2. Artificial ants	270
13.2.3. Extensions	276
13.3. Classification methods ant data	279
13.3.1. Colonial recognition behavior	280
13.3.2. Self-assembling behavior	282
13.4. Some examples of applications	284
13.5. Conclusion	287
13.6. Bibliography	287
Chapter 14. Collective and Mobile Robotics Inspired by Insects	291
Paulo URBANO, Nicolas MONMARCHÉ and Pierre GAUCHER	
14.1. Introduction	291
14.2. Autonomous robotics	292

14.2.1. Introduction	292
14.2.2. Perceptual abilities	293
14.2.3. Motor abilities	297
14.2.4. Energy autonomy abilities	299
14.2.5. Miniaturization	300
14.2.6. Control architectures	300
14.3. Collective robotics	303
14.3.1. Motivations for the collective option	304
14.3.2. Collective movements	305
14.3.3. Picking up and gathering objects	308
14.3.4. Collective transport	310
14.3.5. Other applications in collective robotics	310
14.3.6. Some international projects	312
14.4. Conclusion	313
14.5. Bibliography	313
Chapter 15. Artificial Insects: Design and Achievement of a Popular Science Exhibition Aimed to Promote Collective Artificial Intelligence and Bio-Inspired Robotics	319
Nicolas MONMARCHÉ, Arnaud PURET, Pierre GAUCHER, Mohamed SLIMANE, Pierre LEBOCEY, Julie FORTUNE, Cyrille FAUCHEUX and Didier LASTU	
15.1. Introduction	320
15.2. Description of the exhibition	321
15.3. Description of modules	321
15.3.1. Module no. 1: following pheromone trails	321
15.3.2. Module no. 2: finding its way back to the nest	327
15.3.3. Module no. 3: collective robotics (teamwork)	332
15.3.4. Module no. 4: solving combinatorial problems	336
15.3.5. Module no. 5: ant collective intelligence for the artistic design	337
15.4. Conclusion	339
15.5. Bibliography	342
Chapter 16. Ant Colony Optimization for Routing in an Mobile Networks in an Urban Environment	345
Gianni A. DI CARO, Frederick J.A. DUCATELLE and Luca M. GAMBARDELLA	
16.1. Routing in MANETs	346
16.2. ACO for routing: general principles	347
16.3. The AntHocNet routing algorithm	349
16.3.1. Pheromone tables	349
16.3.2. Reactive route setup	349
16.3.3. Proactive route maintenance and improvement	350

16.3.4. Data forwarding	352
16.3.5. Dealing with link failures	352
16.4. Working in an urban environment	353
16.4.1. The urban environment and node mobility	353
16.4.2. Radio propagation	354
16.4.3. Data traffic	355
16.4.4. Related work on the simulation of MANETs in urban environments	356
16.5. Experimental evaluation	357
16.5.1. Technical details about the simulation setup	357
16.5.2. General network properties	358
16.5.3. Data send rate	359
16.5.4. Number of data sessions	360
16.5.5. Node density	361
16.5.6. Node velocity	362
16.5.7. Supporting VoIP traffic	362
16.6. Conclusion	364
16.7. Bibliography	365
Chapter 17. Detection of Organizations in Complex Systems Using Ant Colonies	369
Antoine DUTOT and Damien OLIVIER	
17.1. Organization, structure, and form	371
17.1.1. Self-organization	372
17.1.2. Mechanisms of self-organization	373
17.2. The main approaches	375
17.2.1. Communities and organizations	375
17.2.2. Search of communities	377
17.3. Ants to search for organizations	381
17.3.1. From communities to organizations	381
17.3.2. Application to the distribution of applications	384
17.4. Conclusion	398
17.5. Bibliography	399
Chapter 18. Artificial Ants and Disability: Three Examples Dealing with the Compensation for Autonomy Losses and Games for Visually Impaired People	403
Alexis SEPCHAT, Sonia COLAS, Romain CLAIR, Nicolas MONMARCHÉ, Pierre GAUCHER and Mohamed SLIMANE	
18.1. Introduction	403
18.2. Optimization of virtual keyboards	404
18.2.1. Modeling the problem	405
18.2.2. Main algorithm	406

18.2.3. Construction of the solution	406
18.2.4. Evaluation of the solution	407
18.2.5. Update of pheromones	408
18.2.6. Experimental results	409
18.3. Generation of a web site map for blind people	411
18.3.1. Modeling the problem	412
18.3.2. Main algorithm	413
18.3.3. Construction of the solution	415
18.3.4. Update of pheromones	417
18.3.5. Experimental results	418
18.4. Self-adaptation of the difficulty level of games	421
18.4.1. Accessibility to video games	421
18.4.2. Modeling the problem of labor division and task allocation	423
18.5. Conclusion	428
18.6. Bibliography	428
Chapter 19. Artificial Ants for Artificial Art	431
Nicolas MONMARCHÉ and Romain CLAIR	
19.1. Introduction	431
19.1.1. Artificial art or artificial design?	431
19.1.2. Artificial life	432
19.1.3. Interactions	433
19.2. Painter ants	434
19.2.1. The generation of paintings by ants	434
19.2.2. Description of the ant model for painting	434
19.2.3. Results	437
19.3. Interactive evolution of the ant paintings	439
19.3.1. The evolutionary art	439
19.3.2. The interactive genetic algorithms	439
19.3.3. IGA + Painting ants = evolutionary art	440
19.3.4. Results	441
19.3.5. Perspectives	443
19.4. Musician ants, the <i>Antmusic</i> project	444
19.4.1. Description and modeling of the problem	445
19.4.2. Developed algorithms	447
19.4.3. Perspectives	451
19.5. Conclusion	452
19.6. Bibliography	452
Chapter 20. Artificial Ants for Natural Language Processing	455
Frédéric GUINAND and Mathieu LAFOURCADE	
20.1. Introduction	456
20.2. Conceptual vectors	459

20.2.1. Construction of conceptual vectors	459
20.2.2. Operations on conceptual vectors	461
20.2.3. From texts to vectors by SP	464
20.3. Colored ants for disambiguation	467
20.3.1. Why use colored ants?	467
20.3.2. Environment	468
20.3.3. General algorithm	470
20.3.4. Nests, life, and death of ants	470
20.3.5. Population of ants	473
20.3.6. Searching behavior	473
20.3.7. Resource bringing back behavior	474
20.3.8. Stigmergy	475
20.4. Discussion and related works	476
20.4.1. Disambiguation (WSD) and interpretation trails	476
20.4.2. Prepositional phrase attachment	477
20.4.3. Results	477
20.4.4. Comparison with existing works	480
20.5. Perspectives	483
20.5.1. Computational issues	483
20.5.2. Dynamic analysis	484
20.6. Conclusion	485
20.7. Appendix: samples of data sets	486
20.7.1. Simple lexical ambiguity	486
20.7.2. Multiple lexical ambiguity	487
20.7.3. Reference problems	489
20.7.4. Prepositional group attachment	489
20.8. Bibliography	490
Chapter 21. Artificial Ants and Bioinformatics (Protein Folding, Multiple Alignment and Sequencing by Hybridization)	493
Stefan BALEV, Omar GACI and Yoann PIGNÉ	
21.1. Introduction	493
21.2. Sequencing by hybridization	494
21.2.1. Graph model	495
21.2.2. Multi-castes ant system	498
21.2.3. Results	501
21.3. Multiple sequence alignment	502
21.3.1. Graph model	503
21.3.2. Ant for multiple sequence alignment	506
21.3.3. Algorithm	507
21.3.4. Analysis	508
21.4. Protein folding	509
21.4.1. Definition of the problem	511

21.4.2. Graph model	513
21.4.3. Ant algorithm	515
21.4.4. Results	518
21.5. Conclusion	518
21.6. Bibliography	519
List of Authors	523
Index of Cited Persons	527
Main Index	531
