<b>Preface</b> . . . . .	ix
<b>Chapter 1. Theoretical Plates in Distillation, Absorption and Stripping – Choice of Type of Column</b> . . . . .	1
1.1. General . . . . .	1
1.1.1. Definitions . . . . .	1
1.1.2. Practical data . . . . .	2
1.1.3. Calculation methods presented in this chapter . . . . .	3
1.2. McCabe and Thiele's method . . . . .	4
1.2.1. Hypotheses specific to McCabe and Thiele's method. . . . .	4
1.2.2. Equilibrium curves $y = f(x)$ . . . . .	4
1.2.3. Material balances . . . . .	5
1.2.4. Plotting of the tiers . . . . .	9
1.2.5. Overall material balance of the column . . . . .	11
1.2.6. Overall heat balance for the column . . . . .	12
1.2.7. Revaporization ratio of the boiler . . . . .	13
1.2.8. Regulation of continuous distillation . . . . .	14
1.2.9. Number of plates for high purity of the light species . . . . .	15
1.2.10. Number of plates for a high degree of purity of the heavy species . . . . .	17
1.3. Global method (more than two components) . . . . .	19
1.3.1. Equations and unknowns . . . . .	19
1.3.2. Partial material balance . . . . .	20
1.3.3. Solutions to partial balance equations (compound i) . . . . .	23
1.3.4. Overall material balances . . . . .	24
1.3.5. Heat balances . . . . .	25

1.3.6. Boiling-point relations . . . . .	26
1.3.7. Global solution method . . . . .	27
1.4. Successive plates method. . . . .	28
1.4.1. General . . . . .	28
1.4.2. Flowrate and composition of the distillate and of the residue . . . . .	28
1.4.3. Overall heat balance . . . . .	29
1.4.4. Calculation of the plate temperatures . . . . .	30
1.4.5. Compositions on the plates . . . . .	32
1.4.6. Consistency between the two sections. . . . .	33
1.5. Conclusion . . . . .	34
1.6. Choice of type of column. . . . .	35
<b>Chapter 2. Design and Performances of Gas–Liquid Perforated Plates . . . . .</b>	<b>37</b>
2.1. Geometry of the plate . . . . .	37
2.1.1. Advantage to using perforated plates . . . . .	37
2.1.2. Diameter of the column . . . . .	37
2.1.3. Design of the downcomers . . . . .	38
2.1.4. Possible configurations for the downcomer . . . . .	40
2.1.5. Dam length and number of passes . . . . .	43
2.1.6. Active area. . . . .	44
2.1.7. Characteristics of holes . . . . .	45
2.1.8. Plate of large diameter . . . . .	47
2.2. Drop in vapor pressure on crossing the plate . . . . .	48
2.2.1. Dry pressure drop (across the plate without liquid) . . . . .	48
2.2.2. Capillarity term in the pressure drop in the presence of liquid . . . . .	49
2.2.3. Pressure drop on crossing the liquid–vapor mixture . . . . .	49
2.2.4. Pressure drop and height of the output dam . . . . .	51
2.3. Hydrodynamics of the plate . . . . .	53
2.3.1. General points on flooding . . . . .	53
2.3.2. Accumulation of liquid in the downcomer . . . . .	54
2.3.3. Flooding by entrainment of drops of liquid. . . . .	56
2.3.4. Flowrate of entrained drops . . . . .	59
2.3.5. Heights of clear liquid and of the LVM. . . . .	60
2.3.6. Beginning of weeping . . . . .	61
2.3.7. Transition between the foam and jet regimes . . . . .	62
2.4. Transfers of mass and heat. . . . .	63
2.4.1. Interfacial area . . . . .	63
2.4.2. Coefficient of mass transfer on the side of the gaseous phase. . . . .	65

---

2.4.3. Coefficient of mass transfer on the side of the liquid phase . . . . .	66
2.4.4. Overall transfer coefficient . . . . .	67
2.4.5. Arrangement of the mixture on the plate . . . . .	67
2.4.6. Local transfer (on a vertical) . . . . .	69
2.4.7. Murphree efficiency . . . . .	70
2.4.8. Evolution of liquid on the plate. . . . .	70
2.4.9. Mass balance on the side of the liquid. . . . .	72
2.4.10. Material balance on the side of the vapor (unsteady regime) . . . . .	74
2.4.11. Mean composition of the liquid on a plate . . . . .	74
2.4.12. Direction of calculation (bottom-up or top-down in the column) . . . . .	77
2.4.13. Equilibrium straight lines of the components. . . . .	77
2.4.14. Heat transfer on the plate . . . . .	78
2.4.15. Calculation of the values used. . . . .	81
2.4.16. Homogeneization of the vapor . . . . .	84
<b>Chapter 3. Design and Performances of Liquid–Gas Packed Columns . . . . .</b>	<b>85</b>
3.1. General . . . . .	85
3.1.1. Principle of packed columns . . . . .	85
3.1.2. Important characteristic values of packed columns . . . . .	85
3.1.3. Usage and advantage of packed columns . . . . .	86
3.1.4. Real height of a packed column . . . . .	86
3.2. Hydrodynamics of packed columns . . . . .	87
3.2.1. Physical significance of engorgement. . . . .	87
3.2.2. Rate of engorgement (approach to engorgement) . . . . .	90
3.2.3. Pressure drop . . . . .	91
3.2.4. Liquid retention . . . . .	93
3.3. Effective height and useable height for the transfer . . . . .	94
3.3.1. Methodology . . . . .	95
3.3.2. Effective area for the transfer. . . . .	95
3.3.3. Partial transfer coefficient on the side of the gas. . . . .	98
3.3.4. Partial transfer coefficient on the side of the liquid . . . . .	100
3.3.5. Heat transfer coefficients . . . . .	101
3.3.6. Height of transfer unit and useable height . . . . .	102
3.3.7. Directly calculating the partial heights of transfer units . . . . .	103

---

3.4. Effects of the distribution of the liquid: dead height . . . . .	107
3.4.1. General . . . . .	107
3.4.2. Feeders . . . . .	108
3.4.3. Accumulation of liquid at the wall (wall effect) . . . . .	109
3.4.4. Effect of parietal flux on absorption and stripping . . . . .	111
3.4.5. Remediating the wall effect – recenterers . . . . .	113
3.4.6. Conclusion . . . . .	113
<b>Chapter 4. Batch Distillation . . . . .</b>	<b>115</b>
4.1. Simple boiling . . . . .	115
4.1.1. Simple boiling of a vat . . . . .	115
4.2. Total-reflux distillation . . . . .	117
4.2.1. Operating principle . . . . .	117
4.2.2. Important convention . . . . .	117
4.2.3. Balances and transfers of material and heat (total reflux) . . . . .	117
4.2.4. Calculations for a total reflux column . . . . .	119
4.3. Batch distillation . . . . .	120
4.3.1. Definitions and advantage to the operation . . . . .	120
4.3.2. Time taken to cross a plate . . . . .	122
4.3.3. Choice of time increment . . . . .	122
4.3.4. Balances of the vat + boiler ensemble . . . . .	123
4.3.5. Balances of the condenser + reflux tube ensemble . . . . .	125
4.3.6. Proceeding of the simulation . . . . .	126
4.3.7. Practical running of an industrial installation . . . . .	127
<b>Appendices . . . . .</b>	<b>129</b>
<b>Appendix 1. A Few Expressions   for Partial Vapor Pressures . . . . .</b>	<b>131</b>
<b>Appendix 2. Characteristics of Typical Packings . . . . .</b>	<b>133</b>
<b>Appendix 3. Proposal for a Normalized Foaming Test . . . . .</b>	<b>135</b>
<b>Appendix 4. Numerical Integration: Runge-Kutta   4th Order Method . . . . .</b>	<b>137</b>
<b>Appendix 5. Molar Retentions . . . . .</b>	<b>139</b>
<b>Bibliography . . . . .</b>	<b>141</b>
<b>Index . . . . .</b>	<b>145</b>
