Table of Contents

Preface xi

PART 1. MATHEMATICAL PRELIMINARIES, DEFINITIONS AND PROPERTIES OF FRACTIONAL INTEGRALS AND DERIVATIVES 1

Chapter 1. Mathematical Preliminaries 3

1.1. Notation and definitions 3
1.2. Laplace transform of a function 6
1.3. Spaces of distributions 7
1.4. Fundamental solution 14
1.5. Some special functions 15

Chapter 2. Basic Definitions and Properties of Fractional Integrals and Derivatives 17

2.1. Definitions of fractional integrals and derivatives 17
2.1.1. Riemann–Liouville fractional integrals and derivatives 17
2.1.1.1. Laplace transform of Riemann–Liouville fractional integrals and derivatives 28
2.1.2. Riemann–Liouville fractional integrals and derivatives on the real half-axis 29
2.1.3. Caputo fractional derivatives 30
2.1.4. Riesz potentials and Riesz derivatives 33
2.1.5. Symmetrized Caputo derivative 36
2.1.6. Other types of fractional derivatives 37
2.1.6.1. Canavati fractional derivative 37
2.1.6.2. Marchaud fractional derivatives 37
2.1.6.3. Grünwald–Letnikov fractional derivatives 38

2.2. Some additional properties of fractional derivatives 38
2.2.1. Fermat theorem for fractional derivative 38
2.2.2. Taylor theorem for fractional derivatives 39
2.3. Fractional derivatives in distributional setting 41
2.3.1. Definition of the fractional integral and derivative 41
2.3.2. Dependence of fractional derivative on order 43
2.3.3. Distributed-order fractional derivative 44

PART 2. MECHANICAL SYSTEMS 49

Chapter 3. Waves in Viscoelastic Materials of Fractional-Order Type . . . 51

3.1. Time-fractional wave equation on unbounded domain 55
3.1.1. Time-fractional Zener wave equation 57
3.1.2. Time-fractional general linear wave equation 65
3.1.3. Numerical examples 74
3.1.3.1. Case of time-fractional Zener wave equation 74
3.1.3.2. Case of time-fractional general linear wave equation 75
3.2. Wave equation of the fractional Eringen-type 77
3.3. Space-fractional wave equation on unbounded domain 82
3.3.1. Solution to Cauchy problem for space-fractional wave equation 84
3.3.1.1. Limiting case $\beta \to 1$ 85
3.3.1.2. Case $u_0(x) = \frac{1}{x^2+d^2}, v_0(x) = 0, x \in \mathbb{R}, d > 0$ 86
3.3.1.3. Case $u_0(x) = 0, v_0(x) = \begin{cases} A\pi, & |x| \le r, \\ 0, & |x| > r, \end{cases} \quad x \in \mathbb{R}$ 87
3.3.1.4. Case $u_0(x) = A\delta(x), v_0(x) = 0, x \in \mathbb{R}, \nu \in (1-\lambda, 1+\lambda)$. 88
3.3.2. Solution to Cauchy problem for fractionally damped space-fractional wave equation 88
3.4. Stress relaxation, creep and forced oscillations of a viscoelastic rod . . 94
3.4.1. Formal solution to systems [3.110]–[3.112], [3.113] and either [3.114] or [3.115] 96
3.4.1.1. Displacement of rod's end Υ is prescribed by [3.120] 99
3.4.1.2. Stress at rod's end Σ is prescribed by [3.121] 100
3.4.2. Case of solid-like viscoelastic body 100
3.4.2.1. Determination of the displacement u in a stress relaxation test 105
3.4.2.2. Case $\Upsilon = \Upsilon_0 H + F$ 113
3.4.2.3. Determination of the stress σ in a stress relaxation test 117
3.4.2.4. Determination of displacement u in the case of prescribed stress 118
3.4.2.5. Numerical examples 119

3.4.3. Case of fluid-like viscoelastic body 127
3.4.3.1. Determination of the displacement u in a stress relaxation test 133
3.4.3.2. Determination of the stress σ in a stress relaxation test 136
3.4.3.3. Determination of the displacement u in a creep test 138
3.4.3.4. Numerical examples 140

Chapter 4. Forced Oscillations of a System: Viscoelastic Rod and Body 149

4.1. Heavy viscoelastic rod-body system 151
4.1.1. Formal solutions 152
4.1.2. Existence and uniqueness of the solution to [4.18]–[4.21] 155
4.1.2.1. Notation and assumptions 156
4.1.2.2. Theorems on the existence and uniqueness 157
4.1.2.3. Auxiliary results 159
4.1.2.4. Proofs of theorems 4.1 and 4.2 169
4.1.2.5. The case of the elastic rod 177
4.1.3. Distributed-order and fractional Zener model as special cases . . . 183
4.1.4. Solid and fluid-like model of a rod. A parallel analysis of systems [4.18]–[4.21] 186
4.1.4.1. Auxiliary results 187
4.1.4.2. Existence theorems 194
4.1.5. Numerical examples 198
4.1.5.1. The case $F = \delta$ 199
4.1.5.2. The case $F = H$ 201
4.2. Light viscoelastic rod – body system 206
4.2.1. The case of the solid-like viscoelastic rod 207
4.2.1.1. Analysis of the problem 207
4.2.1.2. Numerical examples 220
4.2.2. The case of the parallel connection of spring and viscoelastic rod 225
4.2.3. The case of the rod of distributed-order Kelvin–Voigt type 234
4.2.3.1. Study of the generalization of [4.216] 236
4.2.3.2. Two special cases of [4.217] 237

Chapter 5. Impact of Viscoelastic Body Against the Rigid Wall 243

5.1. Rigid block with viscoelastic rod attached slides without friction . . . 244
5.1.1. Analytical solution to [5.6] and [5.7] 245
5.1.1.1. Existence and uniqueness results 245
5.1.1.2. Qualitative properties of solutions 252
5.1.1.3. Iterative procedure 255
5.1.2. Numerical solution to [5.6] and [5.7] 256

5.2. Rigid block with viscoelastic rod attached slides in the presence of dry friction 260
5.2.1. Solution of system [5.42]–[5.44] 263
5.2.1.1. Approach phase 264
5.2.1.2. Rebound phase 268
5.2.2. Numerical examples 272

Chapter 6. Variational Problems with Fractional Derivatives 279

6.1. Euler–Lagrange equations 280
6.2. Linear fractional differential equations as Euler–Lagrange equations . 287
6.3. Constrained variational principles 293
6.4. Approximation of Euler–Lagrange equations 297
6.4.1. Approximation 1 297
6.4.2. Approximation 2 300
6.5. Invariance properties of J: Nöther's theorem 305
6.5.1. The case when a in ${}_a\mathrm{D}_t^\alpha u$ is not transformed 307
6.5.2. The case when a in ${}_a\mathrm{D}_t^\alpha u$ is transformed 311
6.5.3. Nöther's theorem 315
6.5.4. Approximations of fractional derivatives in Nöther's theorem . . . 319
6.6. Complementary fractional variational principles 325
6.6.1. Notation 326
6.6.2. Lagrangian depending on a vector function of scalar argument . . 328
6.6.2.1. An example with the quadratic potential Π 334
6.6.2.2. Complementary principles for the fractional and classical Painlevé equation 338
6.6.3. Lagrangian depending on a scalar function of vector argument . . 343
6.6.3.1. Example in the image regularization 351
6.7. Generalizations of Hamilton's principle 352
6.7.1. Generalized Hamilton's principle with constant-order fractional derivatives 353
6.7.1.1. Examples with Lagrangians linear in y 359
6.7.1.2. Examples with Lagrangians linear in ${}_0\mathrm{D}_t^\alpha y$ 361
6.7.2. Generalized Hamilton's principle with variable-order fractional derivatives 365
6.7.2.1. Various definitions of variable-order fractional derivatives . . 366
6.7.2.2. Distributional setting of variable-order derivatives 369

6.7.2.3. Integration by parts formula 371
6.7.2.4. Stationarity conditions when function α is given in advance . 372
6.7.2.5. Stationarity conditions when function α is a constant, not given in advance 373
6.7.2.6. Stationarity conditions when function α is not given in advance 374
6.7.2.7. Stationarity conditions when function α is given constitutively 375

Bibliography 379
