| Introduction | ix |
| Part 1. Theoretical Foundation for Dealing with Action Selection and Memorization | 1 |
| Chapter 1. A Unified Theory of Action Selection and Memory | 3 |
| 1.1. Organic self-consistent field theory | 3 |
| 1.1.1. Self-consistent field theory in physics | 3 |
| 1.1.2. “Organic” SCFT | 4 |
| 1.1.3. Human beings considered in O-SCFT | 4 |
| 1.1.4. Scale mix | 5 |
| 1.2. Development of brain architecture model under the NDHB-model/RT | 6 |
| 1.2.1. O-PDP | 6 |
| 1.2.2. The guideline for architecture selection | 6 |
| 1.2.3. Development of cross-networks of neurons in the brain | 7 |
| Chapter 2. NDHB-Model/RT: Nonlinear Dynamic Human Behavior Model with Realtime Constraints | 11 |
| 2.1. Maximum satisfaction architecture | 11 |
| 2.1.1. Happiness goals | 11 |
| 2.1.2. Society layers | 12 |
| 2.1.3. Brain layers | 12 |
| 2.1.4. Conditions to make people feel satisfaction | 15 |
| 2.2. Brain information hydrodynamics | 16 |

| | |
|---|----|
| 2.2.1. The time axis is central to information flow | 17 |
| 2.2.2. Cerebrum formation process | 17 |
| 2.2.3. Information flows in the brain | 19 |
| 2.2.4. Emergence of emotion in BIH | 20 |
| 2.2.5. Biorhythm of information flow | 21 |
| 2.2.6. Role of language | 21 |
| 2.2.7. Multiple personality disorder | 21 |
| 2.3. Structured meme theory | 22 |
| 2.3.1. Meme | 22 |
| 2.3.2. Memes propagate by means of resonance | 23 |
| 2.3.3. Characteristics of meme propagation | 24 |
| 2.4. NDHB-model/RT | 25 |
| 2.5. MHP/RT: Model human processor with real-time constraints | 27 |
| 2.5.1. MHP/RT’s basic flow | 28 |
| 2.5.2. Basic MHP/RT behaviors | 30 |
| 2.6. Two Minds and emotions | 36 |
| 2.6.1. Dynamics of consciousness–emotion interaction: an explanation by MHP/RT | 37 |
| 2.6.2. Taxonomy of emotions: behavioral perspective | 40 |
| Chapter 3. Layered-structure of Memory and its Development | 43 |
| 3.1. MHP/RT modules and their associated memories | 43 |
| 3.1.1. Memory formation process | 45 |
| 3.1.2. MD memory frames | 46 |
| 3.1.3. Memory functions via resonance | 49 |
| 3.1.4. Memory operates in pipelining | 49 |
| 3.2. Hierarchical structure of human action selection | 51 |
| 3.2.1. Three-layered structure of interneurons system | 51 |
| 3.2.2. Formation process | 51 |
| 3.3. Emotion initiation via memory processes | 54 |
| Chapter 4. Implication for Human–Machine Interaction: Autonomous System Interaction Design (ASID) based on NDHB-Model/RT | 57 |
| 4.1. Users modeled by MHP/RT with MD memory frames | 57 |
| 4.2. Autonomous systems versus linear systems | 58 |
| 4.2.1. Linear systems | 58 |

| | |
|--|-----------|
| 4.2.2. Autonomous systems | 60 |
| 4.3. Needs that a society of information systems must meet | 60 |
| 4.4. Outline of ASI | 61 |
| 4.5. Conclusions | 62 |
| Part 2. Theoretically Motivated Methodology for Understanding Users | 65 |
| Chapter 5. Cognitive Chrono-ethnography | 67 |
| 5.1. Understanding people's behavior in real life | 67 |
| 5.2. Cognitive chrono-ethnography | 69 |
| 5.2.1. Requirements for the methodology (CCE) to study human beings' behavior in real life | 69 |
| 5.2.2. CCE procedure | 70 |
| 5.2.3. Behavior selection shaping factors | 72 |
| Chapter 6. A CCE Study: Slow Self-paced Navigation | 75 |
| 6.1. Introduction: navigation in a train station by following signs | 75 |
| 6.2. Steps 1 and 2 of CCE | 76 |
| 6.2.1. Attention, planning and working memory | 77 |
| 6.2.2. An MHP/RT simulation of navigation behavior | 78 |
| 6.3. Step 3 of CCE: monitor recruiting | 82 |
| 6.3.1. Investigation of cognitive aging characteristics | 82 |
| 6.4. Steps 4 and 5 of CCE: monitor behavior observation and individual model construction | 83 |
| 6.4.1. Train stations, tasks and participants | 84 |
| 6.4.2. Method | 85 |
| 6.5. Step 6 of CCE: socioecological model construction | 86 |
| 6.6. Discussion | 87 |
| 6.6.1. Two modes of navigation | 87 |
| 6.6.2. Web navigation | 88 |
| 6.6.3. Nature of complicated navigation processes | 90 |
| 6.7. Conclusions | 90 |
| Chapter 7. Fast Externally-paced Navigation | 93 |
| 7.1. Introduction | 93 |
| 7.2. Steps 1 and 2 of CCE | 95 |
| 7.2.1. Designing a CCE study | 96 |

| | |
|--|------------|
| 7.3. Step 3 of CCE: monitor recruiting | 98 |
| 7.3.1. Screening | 99 |
| 7.3.2. Interview for the final selection | 100 |
| 7.4. Steps 4 and 5 of CCE: monitor behavior observation and individual model construction | 100 |
| 7.4.1. Data analysis | 100 |
| 7.4.2. Information necessary for safe and enjoyable driving | 102 |
| 7.4.3. Examples | 103 |
| 7.5. Conclusions | 105 |
| Chapter 8. Designing for Future Needs | 109 |
| 8.1. Introduction | 109 |
| 8.2. Making inaccessible future needs accessible: <i>t</i> -translation invariant principle | 110 |
| 8.3. A case study of CCE: why do fans repeat visits to the ballpark? | 112 |
| 8.3.1. Steps 1 and 2 of CCE | 112 |
| 8.3.2. Step 3 of CCE: monitor recruiting | 115 |
| 8.3.3. Step 4 of CCE: field observation | 115 |
| 8.3.4. Step 5 of CCE: conduct retrospective interviews | 116 |
| 8.3.5. Step 6 of CCE: socioecological model construction | 117 |
| 8.3.6. Results: developing from a pre-fan to a repeater | 120 |
| 8.4. Discussion | 122 |
| 8.4.1. Selection of elite monitors | 122 |
| 8.4.2. CCE interview | 122 |
| 8.4.3. Applicability of CCE | 123 |
| 8.5. Conclusions | 124 |
| Conclusion | 127 |
| Bibliography | 133 |
| Index | 137 |
