

## Table of Contents

<b>Preface</b> . . . . .	xi
<b>Acknowledgments</b> . . . . .	xv
<b>PART 1. CONCEPTS, DISCOVERIES AND THE RAPID DEVELOPMENT OF NANOTECHNOLOGIES.</b> . . . . .	1
<b>Chapter 1. Nanotechnologies in Context: Social and Scientific Awareness of their Impact</b> . . . . .	3
1.1. Feynman, the visionary . . . . .	3
1.2. Nanotechnologies and their definition . . . . .	5
1.3. The consideration of nanotechnologies by scientific organizations . . . . .	8
1.4. Bibliography . . . . .	11
<b>Chapter 2. The Rapid Expansion of Nanotechnology: New Ways of Observing the Infinitesimal and the Discovery of Carbonaceous Nanomaterials with Unusual Properties</b> . . . . .	13
2.1. Improving tools for observing the infinitesimal . . . . .	15
2.1.1. Transmission electron microscopes . . . . .	15
2.1.2. Scanning electron microscopes . . . . .	18
2.1.3. Near-field microscopes . . . . .	21
2.1.3.1. The tunnel-effect microscope (STM or scanning tunneling microscopy) . . . . .	22
2.1.3.2. Atomic force microscopy . . . . .	26
2.2. The discovery of new carbonaceous nanomaterials . . . . .	28
2.2.1. Some basic concepts relative to the electronic structure of carbon and to the bonding rules between carbon atoms . . . . .	29

2.2.1.1. The enigma of carbon atoms . . . . .	29
2.2.1.2. Diamond or the perfect and unique tetrahedral chain of carbon atoms . . . . .	31
2.2.1.3. Graphite or the intrusion of $\pi$ electrons in the assembly of carbon atoms . . . . .	32
2.2.2. The fullerenes or graphite sheets rolled into a ball . . . . .	34
2.2.3. Carbon nanotubes: tubes of graphite sheets . . . . .	36
2.2.4. Graphene or graphite “sheets” . . . . .	39
2.2.4.1. The identification of graphene . . . . .	39
2.2.4.2. Some remarkable electrical properties . . . . .	41
2.2.4.3. Remarkable progress: solid, flexible and easily manipulated graphene paper . . . . .	43
2.2.5. Link between conjugated carbonaceous nanomaterials . . . . .	45
2.3. Conclusions . . . . .	46
2.4. Bibliography . . . . .	46
<b>Chapter 3. Nanomaterials in All Their Forms: New Properties Due to the Confinement of Matter . . . . .</b>	<b>49</b>
3.1. The different types of nano-objects: main methods of preparation . . . . .	50
3.1.1. Colloidal solutions of gold NPs . . . . .	50
3.1.2. Hybrid and magnetic NPs (ferromagnetic fluids) . . . . .	52
3.1.3. Semiconducting NPs (quantum dots) . . . . .	54
3.1.4. Phospholipid vesicles and encapsulation by liposomes . . . . .	58
3.1.5. Nanowires . . . . .	60
3.2. Organizing nanoparticles into arrays . . . . .	63
3.2.1. Self-assembly . . . . .	64
3.2.1.1. Molecular self-assembly and the formation of nanometric networks . . . . .	65
3.2.1.2. Self-assembly of NPs on solid surfaces . . . . .	70
3.2.2. Assembling by ultrathin alumina membranes . . . . .	74
3.2.3. Assembling by colloidal lithography . . . . .	75
3.3. Conclusions . . . . .	78
3.4. Bibliography . . . . .	78
<b>Chapter 4. Some Amazing Properties of Nanomaterials and of Their Assembly into Networks . . . . .</b>	<b>81</b>
4.1. The first effect of the confinement of matter: unusual catalytic and physicochemical properties . . . . .	81
4.2. The optoelectronic properties of NPs due to confinement . . . . .	82

4.2.1. Some concepts of physics that can be applied to solid materials . . . . .	83
4.2.2. The plasmon resonance effect and the optical properties of gold NPs . . . . .	85
4.2.3. Surface enhanced Raman scattering . . . . .	87
4.2.4. The photothermal effect or how to heat up gold NPs . . . . .	89
4.2.5. The optoelectronic properties of Quantum Dots. . . . .	89
4.3. The amazing properties of NP networks or nanostructured surfaces . . . . .	91
4.3.1. Wettability of structured surfaces. . . . .	91
4.3.2. Optical properties. . . . .	94
4.3.2.1. Photonic crystals. . . . .	97
4.3.2.2. Waveguides. . . . .	98
4.3.2.3. Qdot LASER diodes . . . . .	100
4.3.2.4. Antireflective surfaces . . . . .	105
4.3.2.5. Plasmonic crystals and the SERS effect . . . . .	106
4.3.3. Nanoelectronics applied to the detection of trace elements: nanowire transistors . . . . .	109
4.3.3.1. The operating principle of the FET sensor. . . . .	110
4.3.3.2. An example of how it could be applied: detecting explosives . . . . .	110
4.3.3.3. Electronic noses . . . . .	113
4.4. Conclusions and perspectives. . . . .	113
4.5. Bibliography . . . . .	114
<b>PART 2. APPLICATIONS AND SOCIETAL IMPLICATIONS OF NANOTECHNOLOGY . . . . .</b>	<b>117</b>
<b>Chapter 5. Nanoelectronics of the 21st Century . . . . .</b>	<b>119</b>
5.1. Some history . . . . .	119
5.2. Molecular electronics. . . . .	123
5.2.1. Single Electronics. Dream or reality? . . . . .	124
5.2.1.1. Electron box and electron transfer by quantum tunneling . . . . .	124
5.2.1.2. The single-electron transistor (SET) . . . . .	127
5.2.2. The ultimate step: the molecule . . . . .	130
5.2.2.1. Technical issues in the assembly of a metal/single molecule/metal junction . . . . .	130
5.2.2.2. Molecular diodes made from self-assembled organic molecules . . . . .	132
5.2.2.3. Electrical properties of self-assembled organic layers . . . . .	133

5.2.2.4. The organic field-effect transistor . . . . .	135
5.2.3. Conclusion . . . . .	137
5.3. Spintronics . . . . .	137
5.3.1. Electron spin and ferromagnetic materials . . . . .	138
5.3.2. Magnetoresistance . . . . .	139
5.3.3. Giant magnetoresistance . . . . .	140
5.4. Conclusions . . . . .	143
5.5. Bibliography . . . . .	144
<b>Chapter 6. Energy and Nanomaterials . . . . .</b>	<b>147</b>
6.1. Electrochemical storage of electricity . . . . .	148
6.1.1. Electrical properties of an accumulator . . . . .	150
6.1.2. Lithium batteries . . . . .	151
6.1.2.1. The functional originality of a Li-ion electrochemical cell . . . . .	154
6.1.2.2. Nanotechnology to the rescue: the graphene solution? . . . . .	156
6.1.3. Electrochemical capacitors and supercapacitors. . . . .	157
6.1.3.1. Peculiarities of the electrochemical capacitor. . . . .	158
6.1.3.2. The developments and the state of the art . . . . .	161
6.1.4. Conclusions . . . . .	164
6.2. The conversion of solar energy into electrical energy . . . . .	165
6.2.1. The principle of the conversion . . . . .	166
6.2.1.1. The photoelectric effect and its history . . . . .	166
6.2.1.2. Photoionization of a semiconductor and collection of the charges at the electrodes . . . . .	168
6.2.2. The inorganic route based on mineral semiconductors . . . . .	170
6.2.3. The organic route . . . . .	172
6.2.3.1. Organic photovoltaic cells . . . . .	172
6.2.3.2. Grätzel dye-sensitized solar cells (DSSC) . . . . .	176
6.3. Fuel cells . . . . .	179
6.3.1. Functional principles of PEMFCs . . . . .	181
6.3.2. Can the cost of dihydrogen fuel cells be reduced? . . . . .	183
6.4. General conclusions. . . . .	188
6.5. Bibliography . . . . .	189
<b>Chapter 7. Nanobiology and Nanomedicine . . . . .</b>	<b>193</b>
7.1. Introduction . . . . .	193
7.2. Bionanoelectronics . . . . .	194
7.2.1. The multiplexed detection of PSA using “transistorized” nanowires . . . . .	195
7.2.1.1. Immunological assay of proteins by labeling . . . . .	195

7.2.1.2. Use of nanowire networks . . . . .	197
7.2.1.3. The simplified and ultrasensitive detection of PSA . . . . .	197
7.2.1.4. Conclusions . . . . .	201
7.2.2. Connecting the organic and the artificial . . . . .	201
7.2.2.1. The construction of a nanosensor and its function . . . . .	202
7.2.2.2. Proton exchanges and their inhibition by calcium ions . . . . .	204
7.2.2.3. Conclusions . . . . .	205
7.3. Nanomedicine . . . . .	205
7.3.1. Biological barriers and the alteration of the cellular tissue surrounding a tumor . . . . .	206
7.3.1.1. The extravasation of nanoparticles toward cancerous tissue . . . . .	208
7.3.2. Nanoprobes for in vivo real-time imaging . . . . .	210
7.3.2.1. Imagery resulting from plasmon resonance of gold NPs and from their interaction with enzymes characteristic of a pathological process . . . . .	210
7.3.2.2. Luminescence imaging triggered by enzymes or reactive oxygen species characteristic of a pathology . . . . .	213
7.3.2.3. Magnetic resonance imaging coupled with nanophototherapy . . . . .	215
7.3.2.4. An innovative strategy for an improved penetration of the NPs in the cancerous cell tissue . . . . .	218
7.3.3. Challenges of nanomedicine and some significant clinical results . . . . .	221
7.3.3.1. The first commercial nanomedication . . . . .	221
7.3.3.2. New paths in development . . . . .	223
7.3.4. Problems related to the toxicity of nanomaterials . . . . .	228
7.3.4.1. A few general considerations . . . . .	228
7.3.4.2. The multiple causes of nanomaterial-induced toxicity . . . . .	231
7.3.4.3. Recommendations for a better evaluation of NP toxicity . . . . .	232
7.4. Conclusions and perspectives . . . . .	234
7.5. Bibliography . . . . .	235
<b>Chapter 8. Nanorobotics and Nanomachines of the Future . . . . .</b>	<b>239</b>
8.1. Natural molecular machines . . . . .	240
8.1.1. ATP-synthase . . . . .	240
8.1.2. Myosin: a linear protein nanomotor . . . . .	242
8.2. Artificial molecular machines . . . . .	243

8.2.1. Artificial molecular machines in solution . . . . .	244
8.2.1.1. Rotaxanes (translational molecular shuttles) . . . . .	245
8.2.1.2. Catenanes . . . . .	249
8.2.1.3. Promising applications for diagnosis and therapy . . . . .	251
8.2.2. Nanomachines with mechanical properties . . . . .	253
8.2.2.1. Rotors and gyroscopes . . . . .	254
8.2.2.2. “Motorized” molecular vehicles . . . . .	256
8.3. Conclusions . . . . .	258
8.4. Bibliography . . . . .	259
<b>Conclusions and Outlook . . . . .</b>	<b>263</b>
<b>Index of Names . . . . .</b>	<b>267</b>
<b>Index . . . . .</b>	<b>269</b>
