Preface	xi
Chapter 1. A Bit of History	1
1.1. The production of sound	1
1.2. The propagation of sound	4
1.3. The reception of sound	6
1.4. Aeroacoustics	7
Chapter 2. Elements of Continuum Mechanics	9
2.1. Mechanics of deformable media	9
2.1.1. Continuum	9
2.1.2. Kinematics of deformable media	10
2.1.3. Deformation tensor (or Green's tensor)	12
2.2. Conservation laws	13
2.2.1. Conservation of mass	13
2.2.2. Conservation of momentum	14
2.2.3. Conservation of energy	15
2.3. Constitutive laws	15
2.3.1. Elasticity	16
2.3.2. Thermoelasticity and effects of temperature variations	19
2.3.3. Viscoelasticity	21
2.3.4. Fluid medium	28
2.4. Hamilton principle	29
2.5. Characteristics of materials	29
Chapter 3. Small Mathematics Travel Kit	31
3.1. Measure theory and Lebesgue integration	32
3.1.1. Boolean algebra	32

3.1.2. Measure on a σ -algebra	33
3.1.3. Convergence and integration of measurable functions	33
3.1.4. Functional space – functional	35
3.1.5. Measure as linear functional	36
3.2. Distributions	37
3.2.1. The space \mathcal{D} of test functions	37
3.2.2. Distributions definition	37
3.2.3. Operations on distributions	39
3.2.4. N-dimensional generalization	43
3.2.5. Distributions tensor product	47
3.3. Convolution	48
3.3.1. Definition and first properties	48
3.3.2. Convolution algebra and Green’s function	50
3.4. Modal methods	52
3.4.1. Eigenmodes of a conservative system	52
3.4.2. Eigenmodes of a non-conservative system	55
Chapter 4. Fluid Acoustics	65
4.1. Acoustics equations	66
4.1.1. Conservation equations	66
4.1.2. Establishment of general equations	67
4.1.3. Establishment of the wave equation	68
4.1.4. Velocity potential	69
4.2. Propagation and general solutions	69
4.2.1. One-dimensional motion	69
4.2.2. Three-dimensional motion	70
4.3. Permanent regime: Helmholtz equation	71
4.3.1. General solutions	72
4.3.2. Green’s kernels	76
4.3.3. Wave group, phase velocity and group velocity	78
4.4. Discontinuity equations	80
4.4.1. Interface between two propagating media	80
4.4.2. Interface between a propagating and a non-propagating medium	82
4.5. Impedance: measurement and model	83
4.5.1. Kundt’s tube	83
4.5.2. Delany–Bazley model	85
4.6. Homogeneous anisotropic medium	87
4.7. Medium with a slowly varying celerity	88
4.8. Media in motion	89
4.8.1. Homogeneous medium in uniform motion	89
4.8.2. Plane interface between media in motion	90
4.8.3. Cylindrical interface between media in motion	92
4.8.4. Acoustic radiation of a moving surface	94

Chapter 5. Radiation, Diffraction, Enclosed Space	105
5.1. Acoustic radiation	106
5.1.1. A simple example	106
5.2. Acoustic radiation of point sources	107
5.2.1. Multipolar sources in a harmonic regime	107
5.2.2. Far-field	111
5.3. Radiation of distributed sources	111
5.3.1. Layer potentials	111
5.3.2. Green's representation of pressure and introduction to the theory of diffraction	114
5.4. Acoustic radiation of a piston in a plane	119
5.4.1. Far-field radiation of a circular piston: directivity	122
5.4.2. Radiation along the axis of a circular piston	125
5.5. Acoustic radiation of a rectangular baffled structure	126
5.6. Acoustic radiation of moving sources	131
5.6.1. Compact and non-compact sources	131
5.6.2. Sources in uniform and non-uniform motion	135
5.7. Sound propagation in a bounded medium	138
5.7.1. Eigenfrequencies and resonance frequencies	138
5.7.2. The Helmholtz resonator	139
5.7.3. Example in dimension 1	140
5.7.4. Example in dimension 3	141
5.7.5. Propagation of pure sound in a circular enclosure	143
5.8. Basics of room acoustics	149
5.8.1. The concept of acoustic power	149
5.8.2. Directivity index	149
5.8.3. Reverberation duration	150
5.8.4. Reverberant fields	153
5.8.5. Pressure level in rooms	154
5.8.6. Crossover frequency and the reverberation distance	155
5.9. Sound propagation in a wave guide	156
5.9.1. General solution in a wave guide	156
5.9.2. Physical interpretation and theory of modes	157
5.9.3. Green's function	160
5.9.4. Section change	161
5.9.5. Propagation in a conduit in the presence of flow	164
Chapter 6. Wave Propagation in Elastic Media	167
6.1. Equation of mechanical wave propagation	168
6.2. Free waves	169
6.2.1. Volumic waves	169
6.2.2. Plane wave case	170
6.2.3. Surface waves	171
6.3. Green's kernels in a harmonic regime	176

6.4. Thin body approximation for planar structures	177
6.4.1. Straight beams	178
6.4.2. Plane plates	186
6.5. Thin body approximation for cylindrical structures	198
6.5.1. Cylinder	198
6.5.2. Ring	212
Chapter 7. Vibrations of Thin Structures	219
7.1. Beam vibrations	219
7.1.1. Beam compression vibrations	219
7.1.2. Beam bending vibrations	223
7.2. Plate vibrations	233
7.2.1. Infinite plate	233
7.2.2. Finite plate	239
7.2.3. Plate of arbitrary shape	256
7.3. Cylindrical shell vibrations	260
7.3.1. Infinite shell	260
7.3.2. Finite shell	264
Chapter 8. Acoustic Radiation of Thin Plates	275
8.1. First notions of vibroacoustics: a simple example	276
8.1.1. Motion equations	277
8.1.2. Acoustic radiation	278
8.1.3. “Light fluid” approximation	280
8.1.4. Sound transmission	281
8.1.5. Transient regime	290
8.2. Free waves in an infinite plate immersed in a fluid	294
8.2.1. Roots of the dispersion equation	295
8.2.2. Light fluid approximation	297
8.3. Transmission of a plane wave by a thin plate	299
8.4. Radiation of an infinite plate under point excitation	302
8.4.1. Integro-differential equation with respect to \mathbf{u}	303
8.4.2. Fourier transform of \mathbf{u}	303
8.4.3. Calculation of $\mathbf{u}(\mathbf{r})$	305
8.4.4. Radiated acoustic pressure	306
8.5. Acoustic radiation and vibration of finite plates	307
8.5.1. Statement of the problem	307
8.5.2. Exact methods	308
8.5.3. Light fluid approximation	313
8.5.4. Higher order approximations	319
8.6. Heavy fluid coupling: resonance estimation	327
8.6.1. Clamped rectangular plate coupled with a heavy fluid	327
8.6.2. Location of resonances of a coupled plate	343
8.7. Vibrations of a thin plate in a turbulent flow	346

8.7.1. Interspectral density: simple models	347
8.7.2. Green's representation of a coupled plate	350
8.8. Aeroelastic coupling and sloshing	354
8.8.1. Sloshing	354
8.8.2. Convective instability	356
8.8.3. Kelvin–Helmholtz instability	360
Chapter 9. Basic Theoretical Aeroacoustics Models	363
9.1. Preamble	363
9.2. Lighthill's equation and some of the generalizations that have followed	365
9.3. Reminder of some notions on turbulence which will be useful here	376
9.4. The Proudman model for homogeneous and isotropic turbulence	381
9.5. The Lilley model for homogeneous and isotropic turbulence	386
9.6. The recent models and a few experimental validations	387
9.7. The Powell–Howe equation for vorticity-generated sound	397
Chapter 10. A Few Situations Closer to Reality	403
10.1. The Ribner model for jets	403
10.2. Problems and approaches specific to boundary layers	416
10.3. Flame-generated noise	426
10.4. Noise generated by blades	432
10.4.1. Noise generated by a solid body in motion, in the temporal domain	433
10.4.2. Noise generated by a set of rotating blades and fixed cascading blades, in the frequency domain	440
10.4.3. Noise generated by blade–vortex interaction, using the vortex sound generation method	449
10.5. Noise generated and propagation in the outer atmosphere: accounting for the thermal stratification and for likely obstacles	454
10.5.1. Characteristic properties of the atmospheric boundary layer and impacts on sound propagation	455
10.5.2. Models of sound wave propagation in the atmosphere	464
Chapter 11. Implementation and Usage of Numerical Simulations	475
11.1. Hybrid methods	476
11.2. Direct numerical simulations/large eddy simulations	478
11.3. Conclusion	488
Bibliography	491
Index	507
