

Table of Contents

| | |
|---|------|
| Preface | xiii |
| Chapter 1. Evolution of Cellular Mobile Systems | 1 |
| 1.1. Multiple-access techniques used in mobile telephony | 2 |
| 1.1.1. Frequency division duplex (FDD) and time division duplex (TDD). | 2 |
| 1.1.2. Frequency division multiple access (FDMA) | 3 |
| 1.1.3. Time division multiple access (TDMA). | 3 |
| 1.1.4. Code division multiple access (CDMA) | 3 |
| 1.1.5. Space division multiple access (SDMA) | 5 |
| 1.1.6. Orthogonal frequency division multiplexing (OFDM) | 6 |
| 1.2. Evolution from 1G to 2.5G. | 8 |
| 1.2.1. From 1G to 2G | 8 |
| 1.2.2. Enhancements to 2G radio technologies: 2.5G. | 8 |
| 1.3. 3G systems in IMT-2000 framework. | 11 |
| 1.3.1. IMT-2000 radio interfaces | 12 |
| 1.3.2. Core network approaches in 3G systems | 18 |
| 1.4. Standardization process in 3G systems. | 19 |
| 1.5. Worldwide spectrum allocation for IMT-2000 systems | 20 |
| 1.5.1. WARC-92 | 20 |
| 1.5.2. WARC-2000. | 22 |
| Chapter 2. Network Evolution from GSM to UMTS | 25 |
| 2.1. Introduction. | 25 |
| 2.2. UMTS definition and history | 25 |
| 2.3. Overall description of a UMTS network architecture | 27 |
| 2.4. Network architecture evolution from GSM to UMTS | 28 |
| 2.4.1. GSM network architecture of Phases 1 and 2 | 28 |
| 2.4.2. GSM network architecture of Phase 2+ | 29 |

| | |
|---|-----------|
| 2.4.3. Architecture of UMTS networks: evolutionary revolution of GSM | 31 |
| 2.5. Bearer services offered by UMTS networks | 32 |
| 2.6. UMTS protocol architecture based on “stratum” concept. | 33 |
| 2.6.1. Access stratum | 34 |
| 2.6.2. Non-access stratum. | 35 |
| Chapter 3. Services in UMTS | 37 |
| 3.1. Introduction. | 37 |
| 3.2. UMTS mobile terminals | 38 |
| 3.2.1. UE functional description | 38 |
| 3.2.2. UE maximum output power. | 41 |
| 3.2.3. Dual-mode GSM/UMTS terminals | 42 |
| 3.2.4. UE radio access capability | 43 |
| 3.3. Services offered by UMTS networks. | 44 |
| 3.3.1. Standard UMTS telecommunication services | 44 |
| 3.3.2. UMTS bearer services | 45 |
| 3.3.3. Teleservices | 49 |
| 3.3.4. Supplementary services | 52 |
| 3.3.5. Operator specific services: service capabilities | 54 |
| 3.3.6. The virtual home environment | 55 |
| 3.4. Traffic classes of UMTS bearer services | 56 |
| 3.4.1. Conversational services | 57 |
| 3.4.2. Streaming services | 57 |
| 3.4.3. Interactive services | 57 |
| 3.4.4. Background services | 58 |
| 3.5. Service continuity across GSM and UMTS networks | 58 |
| Chapter 4. UMTS Core Network. | 61 |
| 4.1. Introduction. | 61 |
| 4.2. UMTS core network architecture | 61 |
| 4.2.1. Main features of UMTS core network based on <i>Release 99</i> | 62 |
| 4.2.2. Circuit-switched and packet-switched domains | 63 |
| 4.3. Network elements and protocols of the CS and PS domains | 65 |
| 4.3.1. Network elements of the CS domain | 65 |
| 4.3.2. Protocol architecture in the CS domain | 66 |
| 4.3.3. Network elements of the PS domain. | 71 |
| 4.3.4. Protocol architecture in the PS domain | 72 |
| 4.3.5. Integrated UMTS core network | 80 |
| 4.4. Network elements not included in UMTS reference architecture | 81 |
| 4.5. Interoperability between UMTS and GSM core networks | 82 |

| | |
|--|---------|
| Chapter 5. Spread Spectrum and WCDMA | 85 |
| 5.1. Introduction | 85 |
| 5.2. Spread spectrum principles | 85 |
| 5.2.1. Processing gain | 87 |
| 5.2.2. Advantages of spread spectrum | 87 |
| 5.3. Direct sequence CDMA | 88 |
| 5.4. Multiple access based on spread spectrum | 90 |
| 5.5. Maximum capacity of CDMA | 91 |
| 5.5.1. Effect of background noise and interference | 92 |
| 5.5.2. Antenna sectorization | 93 |
| 5.5.3. Voice activity detection | 93 |
| 5.6. Spreading code sequences | 94 |
| 5.6.1. Orthogonal code sequences | 95 |
| 5.6.2. Pseudo-noise code sequences: Gold codes | 96 |
| 5.6.3. Spreading sequences used in UTRA | 98 |
| 5.7. Principles of wideband code division multiple access | 99 |
| 5.7.1. Effects of the propagation channel | 100 |
| 5.7.2. Techniques used in WCDMA for propagation impairment mitigation | 102 |
| Chapter 6. UTRAN Access Network | 113 |
| 6.1. Introduction | 113 |
| 6.2. UTRAN architecture | 113 |
| 6.2.1. The radio network sub-system (RNS) | 115 |
| 6.2.2. Handling of the mobility in the UTRAN | 119 |
| 6.2.3. Summary of functions provided by the UTRAN | 120 |
| 6.3. General model of protocols used in UTRAN interfaces | 121 |
| 6.3.1. Horizontal layers | 122 |
| 6.3.2. Vertical planes | 122 |
| 6.3.3. Control plane of the transport network | 124 |
| 6.4. Use of ATM in the UTRAN network transport layer | 125 |
| 6.4.1. ATM cell format | 125 |
| 6.4.2. ATM and virtual connections | 126 |
| 6.4.3. ATM reference model | 127 |
| 6.5. Protocols in the Iu interface | 128 |
| 6.5.1. Protocol architecture in Iu-CS and Iu-PS interfaces | 128 |
| 6.5.2. RANAP | 132 |
| 6.6. Protocols in internal UTRAN interfaces | 134 |
| 6.6.1. Iur interface (RNC-RNC) | 134 |
| 6.6.2. Iub interface (RNC-Node B) | 137 |
| 6.7. Data exchange in the UTRAN: example of call establishment | 139 |
| 6.8. Summary of the UTRAN protocol stack | 141 |

| | |
|---|-----|
| Chapter 7. UTRA Radio Protocols | 145 |
| 7.1. Introduction | 145 |
| 7.2. Channel typology and description | 146 |
| 7.2.1. Logical channels | 147 |
| 7.2.2. Transport channels | 147 |
| 7.2.3. Physical channels | 151 |
| 7.3. Physical layer | 152 |
| 7.3.1. Physical layer functions | 153 |
| 7.3.2. Mapping of transport channels onto physical channels | 154 |
| 7.4. MAC | 156 |
| 7.4.1. Main functions of MAC | 157 |
| 7.4.2. Mapping of logical channels onto transport channels | 157 |
| 7.4.3. MAC PDU | 158 |
| 7.5. RLC | 160 |
| 7.5.1. Main functions of RLC | 161 |
| 7.5.2. RLC PDU | 162 |
| 7.5.3. RLC transmission and reception model | 165 |
| 7.6. PDCP | 166 |
| 7.7. BMC | 169 |
| 7.8. RRC | 170 |
| 7.8.1. Handling of the RRC connection | 170 |
| 7.8.2. Handling of RRC service states | 171 |
| 7.8.3. System information broadcast | 173 |
| 7.8.4. Handling of the paging | 175 |
| 7.8.5. Cell selection and reselection | 176 |
| 7.8.6. UTRAN mobility handling | 176 |
| 7.8.7. Radio bearer management | 179 |
| 7.8.8. Measurement control | 182 |
| 7.8.9. Ciphering and integrity | 183 |
| 7.8.10. Outer loop power control | 185 |
| 7.8.11. Protocol layers termination in the UTRAN | 185 |
| Chapter 8. Call and Mobility Management | 187 |
| 8.1. Introduction | 187 |
| 8.2. PLMN selection | 188 |
| 8.2.1. Automatic PLMN selection mode | 190 |
| 8.2.2. Manual PLMN selection mode | 190 |
| 8.2.3. PLMN reselection | 191 |
| 8.2.4. Forbidden PLMNs | 191 |
| 8.3. Principle of mobility management in UMTS | 192 |
| 8.3.1. Location areas | 193 |
| 8.3.2. Service states in the core network and the UTRAN | 195 |

| | |
|--|------------|
| 8.4. Network access control | 195 |
| 8.4.1. Allocation of temporary identities | 195 |
| 8.4.2. UE identification procedure | 196 |
| 8.4.3. Ciphering and integrity protection activation | 197 |
| 8.4.4. Authentication | 198 |
| 8.5. Network registration | 201 |
| 8.5.1. IMSI attach procedure | 201 |
| 8.5.2. GPRS attach procedure | 202 |
| 8.6. UE location updating procedures | 205 |
| 8.6.1. Location updating procedure | 205 |
| 8.6.2. Routing area updating procedure | 207 |
| 8.6.3. SRNS relocation | 209 |
| 8.6.4. Detach procedures | 215 |
| 8.7. Call establishment | 215 |
| 8.7.1. Circuit call | 215 |
| 8.7.2. Packet call | 217 |
| 8.8. Intersystem change and handover between GSM and UMTS networks | 220 |
| 8.8.1. Intersystem handover from UMTS to GSM during a CS connection | 220 |
| 8.8.2. Intersystem handover from GSM to UMTS during a CS connection | 222 |
| 8.8.3. Intersystem change from UMTS to GPRS during a PS session | 223 |
| 8.8.4. Intersystem change from GPRS to UMTS during a PS session | 223 |
| Chapter 9. UTRA/FDD Transmission Chain | 227 |
| 9.1. Introduction | 227 |
| 9.2. Operations applied to transport channels | 228 |
| 9.2.1. Multiplexing and channel coding in the uplink | 228 |
| 9.2.2. Multiplexing and channel coding in the downlink | 236 |
| 9.3. Operations applied to physical channels | 238 |
| 9.3.1. Characteristics of physical channels in UTRA/FDD | 238 |
| 9.3.2. Channelization codes | 239 |
| 9.3.3. Scrambling codes | 241 |
| 9.3.4. UTRA/WCDMA transmitter | 244 |
| 9.4. Spreading and modulation of dedicated physical channels | 248 |
| 9.4.1. Uplink dedicated channels | 248 |
| 9.4.2. Downlink dedicated channel | 255 |
| 9.4.3. Time difference between uplink and downlink DPCHs | 260 |
| 9.5. Spreading and modulation of common physical channels | 261 |
| 9.5.1. The Physical Random Access Channel (PRACH) | 261 |
| 9.5.2. The Physical Common Packet Channel (PCPCH) | 262 |
| 9.5.3. The Physical Downlink Shared Channel (PDSCH) | 263 |

| | |
|---|------------|
| 9.5.4. The Synchronization Channel (SCH) | 264 |
| 9.5.5. The Common Pilot Channel (CPICH). | 265 |
| 9.5.6. The Primary Common Control Physical Channel (P-CCPCH) | 266 |
| 9.5.7. The Secondary Common Control Physical Channel (S-CCPCH). | 267 |
| 9.5.8. The Paging Indicator Channel (PICH) | 268 |
| 9.5.9. The Acquisition Indicator Channel (AICH) | 268 |
| 9.5.10. Other downlink physical channels associated with the PCPCH | 269 |
| Chapter 10. UTRA/FDD Physical Layer Procedures | 271 |
| 10.1. Introduction | 271 |
| 10.2. The UE receptor | 271 |
| 10.3. Synchronization procedure | 273 |
| 10.3.1. First step: slot synchronization | 274 |
| 10.3.2. Second step: frame synchronization and code-group identification | 275 |
| 10.3.3. Third step: primary scrambling code identification | 276 |
| 10.3.4. Fourth step: system frame synchronization | 276 |
| 10.4. Random access transmission with the RACH | 277 |
| 10.5. Random access transmission with the CPCH | 279 |
| 10.6. Paging decoding procedure. | 280 |
| 10.7. Power control procedures. | 282 |
| 10.7.1. Open loop power control. | 282 |
| 10.7.2. Inner loop and outer loop power control | 283 |
| 10.8. Transmit diversity procedures | 286 |
| 10.8.1. Time Switched Transmit Diversity (TSTD) | 287 |
| 10.8.2. Space Time block coding Transmit Diversity (STTD) | 288 |
| 10.8.3. Closed loop transmit diversity | 289 |
| Chapter 11. Measurements and Procedures of the UE in RRC Modes | 291 |
| 11.1. Introduction | 291 |
| 11.2. Measurements performed by the physical layer. | 291 |
| 11.2.1. Measurement model for physical layer | 292 |
| 11.2.2. Types of UE measurements | 293 |
| 11.3. Cell selection process | 294 |
| 11.3.1. PLMN search and selection | 295 |
| 11.3.2. Phases in the cell selection process. | 296 |
| 11.3.3. “S” cell selection criterion. | 298 |
| 11.4. Cell reselection process | 299 |
| 11.4.1. Types of cell reselection | 300 |
| 11.4.2. Measurement rules for cell reselection. | 301 |
| 11.4.3. “R” ranking criterion | 301 |
| 11.4.4. Phases in the cell reselection process | 302 |
| 11.5. Handover procedures | 303 |

| | |
|---|------------|
| 11.5.1. Phases in a handover procedure | 304 |
| 11.5.2. Intrafrequency handover | 305 |
| 11.5.3. Interfrequency handover | 310 |
| 11.5.4. Intersystem UMTS-GSM handover | 312 |
| 11.6. Measurements in idle and connected RRC modes | 312 |
| 11.6.1. Measurements in RRC idle, CELL_PCH and URA_PCH states | 312 |
| 11.6.2. Measurements in CELL_FACH state | 313 |
| 11.6.3. Measurements in the CELL_DCH state: the compressed mode | 315 |
| Chapter 12. UTRA/TDD Mode | 321 |
| 12.1. Introduction | 321 |
| 12.2. Technical aspects of UTRA/TDD | 321 |
| 12.2.1. Advantages of UTRA/TDD | 322 |
| 12.2.2. Drawbacks of UTRA/TDD | 324 |
| 12.3. Transport and physical channels in UTRA/TDD | 325 |
| 12.3.1. Physical channel structure | 326 |
| 12.3.2. Dedicated Physical Data Channels | 328 |
| 12.3.3. Common physical channels | 329 |
| 12.4. Service multiplexing and channel coding | 334 |
| 12.4.1. Examples of UTRA/TDD user bit rates | 335 |
| 12.5. Physical layer procedures in UTRA/TDD | 336 |
| 12.5.1. Power control | 336 |
| 12.5.2. Downlink transmit diversity | 338 |
| 12.5.3. Timing advance | 339 |
| 12.5.4. Dynamic channel allocation | 339 |
| 12.5.5. Handover | 340 |
| 12.6. UTRA/TDD receiver | 340 |
| Chapter 13. UMTS Network Evolution | 343 |
| 13.1. Introduction | 343 |
| 13.2. UMTS core network based on <i>Release 4</i> | 345 |
| 13.3. UMTS core network based on <i>Release 5</i> | 347 |
| 13.4. Multimedia Broadcast/Multicast Service (MBMS) | 349 |
| 13.4.1. Network aspects | 349 |
| 13.4.2. MBMS operation modes | 350 |
| 13.4.3. MBMS future evolution | 351 |
| 13.5. UMTS-WLAN interworking | 352 |
| 13.5.1. UMTS-WLAN interworking scenarios | 352 |
| 13.5.2. Network and UE aspects | 354 |
| 13.6. UMTS evolution beyond <i>Release 7</i> | 355 |
| 13.6.1. HSDPA/HSUPA enhancements | 356 |
| 13.6.2. System Architecture Evolution | 356 |
| 13.6.3. Long Term Evolution (LTE) | 357 |

| | |
|---|-----|
| Chapter 14. Principles of HSDPA | 359 |
| 14.1. HSDPA physical layer | 359 |
| 14.1.1. HS-DSCH transport channel | 361 |
| 14.1.2. Mapping of HS-DSCH onto HS-PDSCH physical channels | 362 |
| 14.1.3. Physical channels associated with the HS-DSCH | 363 |
| 14.1.4. Timing relationship between the HS-PDSCH and associated channels. | 366 |
| 14.2. Adaptive modulation and coding | 366 |
| 14.3. Hybrid Automatic Repeat Request (H-ARQ) | 367 |
| 14.4. H-ARQ process example | 369 |
| 14.5. Fast scheduling | 370 |
| 14.6. New architecture requirements for supporting HSDPA | 371 |
| 14.6.1. Impact on Node B: high-speed MAC entity | 371 |
| 14.6.2. Impact on the UE: HSDPA terminal capabilities | 372 |
| 14.7. Future enhancements for HSDPA | 373 |
| 14.7.1. Enhanced UTRA/FDD uplink. | 373 |
| 14.7.2. Multiple Input Multiple Output antenna processing | 374 |
| Appendix 1. AMR Codec in UMTS | 375 |
| A1.1. AMR frame structure and operating modes | 376 |
| A1.2. Dynamic AMR mode adaptation | 378 |
| A1.3. Resource allocation for an AMR speech connection | 380 |
| A1.4. AMR wideband | 380 |
| Appendix 2. Questions and Answers | 383 |
| Bibliography | 395 |
| Glossary | 399 |
| Index | 417 |
