Table of Contents

Preface ix

Introduction xi

Chapter 1. Random Vectors 1

1.1. Definitions and general properties 1
1.2. Spaces $L^1(dP)$ and $L^2(dP)$ 20
1.2.1. Definitions 20
1.2.2. Properties 22
1.3. Mathematical expectation and applications 23
1.3.1. Definitions 23
1.3.2. Characteristic functions of a random vector 34
1.4. Second order random variables and vectors 39
1.5. Linear independence of vectors of $L^2(dP)$ 46
1.6. Conditional expectation (concerning random vectors with density function) 51
1.7. Exercises for Chapter 1 56

Chapter 2. Gaussian Vectors 63

2.1. Some reminders regarding random Gaussian vectors 63
2.2. Definition and characterization of Gaussian vectors 66
2.3. Results relative to independence 68
2.4. Affine transformation of a Gaussian vector 72
2.5. The existence of Gaussian vectors 74
2.6. Exercises for Chapter 2 84

Chapter 3. Introduction to Discrete Time Processes 93

3.1. Definition 93
3.2. WSS processes and spectral measure 105
3.2.1. Spectral density 105
3.3. Spectral representation of a WSS process 109
3.3.1. Problem 109
3.3.2. Results. 111
3.4. Introduction to digital filtering 114
3.5. Important example: autoregressive process 127
3.6. Exercises for Chapter 3 132

Chapter 4. Estimation 139

4.1. Position of the problem 139
4.2. Linear estimation 142
4.3. Best estimate – conditional expectation 154
4.4. Example: prediction of an autoregressive process AR (1) 162
4.5. Multivariate processes 163
4.6. Exercises for Chapter 4 172

Chapter 5. The Wiener Filter 177

5.1. Introduction 177
5.1.1. Problem position 178
5.2. Resolution and calculation of the FIR filter 179
5.3. Evaluation of the least error. 181
5.4. Resolution and calculation of the IIR filter 183
5.5. Evaluation of least mean square error 187
5.6. Exercises for Chapter 5 188

Chapter 6. Adaptive Filtering: Algorithm of the Gradient and the LMS. 195

6.1. Introduction 195
6.2. Position of problem 198
6.3. Data representation 200
6.4. Minimization of the cost function 202
6.4.1. Calculation of the cost function 205
6.5. Gradient algorithm 209
6.6. Geometric interpretation 212
6.7. Stability and convergence 216

6.8. Estimation of gradient and LMS algorithm 221
6.8.1. Convergence of the algorithm of the LMS 223
6.9. Example of the application of the LMS algorithm. 224
6.10. Exercises for Chapter 6. 233

Chapter 7. The Kalman Filter 235

7.1. Position of problem 235
7.2. Approach to estimation. 239
7.2.1. Scalar case 239
7.2.2. Multivariate case 242
7.3. Kalman filtering 243
7.3.1. State equation 243
7.3.2. Observation equation 244
7.3.3. Innovation process 246
7.3.4. Covariance matrix of the innovation process 246
7.3.5. Estimation 248
7.3.6. Riccati's equation. 257
7.3.7. Algorithm and summary 259
7.4. Exercises for Chapter 7 261
7.5. Appendices 267
7.6. Examples treated using Matlab software. 273

Table of Symbols and Notations. 281

Bibliography. 283

Index. 285
