

# Contents

<b>Introduction</b> . . . . .	7
<b>Chapter 1. On Process Modeling</b> . . . . .	13
1.1. Introduction . . . . .	13
1.2. Model classification . . . . .	14
1.2.1. Heat and mass balances . . . . .	18
1.2.2. Mechanical systems . . . . .	39
1.2.3. Electrical systems . . . . .	50
1.3. Linearization . . . . .	58
<b>Chapter 2. Laplace Transforms and Block Diagrams</b> . . . . .	67
2.1. The Laplace transform . . . . .	67
2.2. Transfer functions . . . . .	69
2.3. Laplace transform calculations . . . . .	72
2.4. Differential and integral equations . . . . .	87
2.5. Block diagrams . . . . .	99
2.6. Feedback systems . . . . .	111
<b>Chapter 3. Analysis</b> . . . . .	139
3.1. Introduction . . . . .	139
3.2. Step responses . . . . .	140
3.3. System identification . . . . .	148
3.4. Frequency response . . . . .	163
<b>Chapter 4. Stability and the Root Locus</b> . . . . .	205
4.1. Stability . . . . .	205
4.1.1. The Routh–Hurwitz criterion . . . . .	207
4.1.2. Revers’s criterion . . . . .	208

6 Control of Continuous Linear Systems

4.2. The root locus . . . . .	231
<b>Chapter 5. Regulation and PID Regulators . . . . .</b>	<b>255</b>
5.1. Introduction . . . . .	255
5.2. Direct design . . . . .	259
5.3. PID tuning . . . . .	269
<b>Appendices . . . . .</b>	<b>304</b>
A. On Theoretical Aspects . . . . .	305
A.1. The Dirac impulse . . . . .	305
A.1.1. Residence time . . . . .	310
A.2. The unit step . . . . .	311
A.3. The Routh–Hurwitz criterion . . . . .	313
A.4. The Nyquist criterion . . . . .	320
A.5. The root locus . . . . .	325
A.6. Computation of integrals of the form $J_2$ . . . . .	335
A.7. On non-linear systems . . . . .	336
<b>Bibliography . . . . .</b>	<b>345</b>
<b>Index . . . . .</b>	<b>349</b>
