Foreword	ix
Introduction	xi
Part 1. Disaster Prevention Policies: Paradoxical and Ambiguous Assessments	1
Chapter 1. The Rise in Knowledge and Policies Suggest an Increase in Disasters	3
1.1. According to the EM-DAT and DesInventar databases, the number of disasters would increase	4
1.1.1 What is a disaster?	4
1.1.2. Even more disasters according to EM-DAT	10
1.1.3. Even more disasters according to DesInventar, which integrates “extensive risks”	15
1.2. Disaster prevention policies are proliferating on every scale.	19
1.2.1. At the national scale, there is an increasing number of laws and legal standards dedicated to disaster prevention	20
1.2.2. At the national scale, there are an increasing number of institutions dedicated to disaster prevention	21
1.2.3. More disaster prevention frameworks for action at the international scale.	23
1.3. Research on disasters and their prevention is also increasing	24
1.3.1. Diversification of schools of thought on disaster prevention	25

1.3.2. Evolution and diversification of international journals on disaster prevention.	28
1.3.3. Evolution and diversification of international research projects on disasters.	29
Chapter 2. The Contributions to Disaster Prevention are Difficult to Assess.	33
2.1. Disasters are not increasing according to all databases	34
2.2. Not necessarily more disasters, but definitely more to lose	39
2.3. There is not always more mortality associated with disasters	45
2.4. The markets interested in disaster prevention.	49
Part 2. Understanding and Managing Disaster Risk: The Multiple Limits of Specialized Approaches	57
Chapter 3. The Limits of Understanding Disasters	59
3.1. The place and status of inherent uncertainty in databases	61
3.2. Disaster risk: ambiguous definitions	68
3.3. The difficult search for a conceptual model of disaster prevention.	75
Chapter 4. The Limits of Disaster Prevention: Returns on Management Experiences	83
4.1. Returns on experience demonstrate the universal character of the limits	84
4.2. Dike risk in France: an example of unintended consequences	88
4.3. Segmentation and politicization of risk management in Ecuador	93
4.3.1. Emergence and ambiguities of a national strategy for risk management.	94
4.3.2. The multiple obstacles to setting up SNDGR	95
4.3.3. Different visions of risk management coexist	96

Part 3 Why and How Does the Prevention of Disasters Necessitate Thinking and Acting in an Imperfect World?	99
Chapter 5. The Principle of Cognitive Limits: Its Application to Disaster Prevention	103
5.1. The analytical basis: the Cartesian method and the fragmentation of notions	103
5.2. Reconstitution of the analytical foundation: Pascal and the systemic attempts	108
5.3. The limitations of analytical reconstitution: Bergson's intuition	114
Chapter 6. Bridging the Gap between Disaster Prevention and Environmental Concerns	123
6.1. The gradual contributions of environmental interpretations to disaster prevention	124
6.1.1. Emergence and strengthening of environmental concerns	124
6.1.2. Environmental issues and society interaction	125
6.1.3. The environment – the divide between science and politics	127
6.2. Advantages and disadvantages for the increase in complexity for disaster prevention	130
6.2.1. Virtuous effects of risk inclusion within the environmental issue	130
6.2.2. Confusion, diversion and exploitation: are these inevitable pitfalls of complexity?	133
Chapter 7. Reflections upon the Contribution of Social Geography to Disaster Prevention	139
7.1. What epistemologies are necessary to develop environmental knowledge?	140
7.1.1. Various ways of framing and various subjects	141
7.1.2. Different systems for collecting evidence	143
7.2. Under what conditions do social sciences contribute to disaster prevention?	147
7.2.1. Interdisciplinarity? Complex epistemological combinations	148
7.2.2. Social utility – the trap of legitimate framing	151

7.2.3. Conditioning through institutional organization and political economics	154
7.3. What contributions do social sciences make to both disaster prevention and acting in an imperfect world?	157
7.3.1. Charting the social fabric of disasters	157
7.3.2. A critical reflection around the expression of an issue	159
7.3.3. Raising the axiological challenge	161
Chapter 8. How Can We Best Manage Disasters?	165
8.1. The knowledge management systems' contributions to disaster prevention policies.	168
8.2. Resistance to prevention policies: poverty and power relations, lifelong obstacles	173
8.3. Evolution or revolution? The dilemma of Pahl-Wostl	182
Conclusion	191
Bibliography	199
Index	219
