INTRODUCTION	ix
CHAPTER 1. BACKGROUND AND SYSTEM MODEL	1
1.1. Channel model	1
1.1.1. The multipath channel	1
1.1.2. Statistics of the channel	2
1.2. Transmission of an OFDM signal	7
1.2.1. Continuous representation	7
1.2.2. Discrete representation	9
1.2.3. Discrete representation under synchronization mismatch	12
1.3. Pilot symbol aided channel and noise estimation	12
1.3.1. The pilot arrangements	12
1.3.2. Channel estimation	15
1.3.3. Noise variance estimation	19
1.4. Work motivations	22
CHAPTER 2. JOINT CHANNEL AND NOISE VARIANCE ESTIMATION IN THE PRESENCE OF THE OFDM SIGNAL	25
2.1. Presentation of the algorithm in an ideal approach	25
2.1.1. Channel covariance matrix	25
2.1.2. MMSE noise variance estimation	27

2.1.3. Proposed algorithm: ideal approach	27
2.1.4. Simulation results: ideal approach	41
2.2. Algorithm in a practical approach	48
2.2.1. Proposed algorithm: realistic approach	48
2.2.2. Convergence of the algorithm	51
2.2.3. Simulations results: realistic approach	60
2.3. Summary	65
CHAPTER 3. APPLICATION OF THE ALGORITHM AS A DETECTOR FOR COGNITIVE RADIO SYSTEMS	67
3.1. Spectrum sensing	67
3.1.1. Non-cooperative methods	69
3.1.2. Cooperative methods	71
3.2. Proposed detector	73
3.2.1. Detection hypothesis	73
3.2.2. Convergence of the MMSE-based algorithm under the hypothesis \mathbb{H}_0	74
3.2.3. Decision rule for the proposed detector	79
3.3. Analytical expressions of the detection and false alarm probabilities	82
3.3.1. Probability density function of \mathcal{M} under \mathbb{H}_1	82
3.3.2. Probability density function of \mathcal{M} under \mathbb{H}_0	85
3.3.3. Analytical expressions of P_d and P_{fa}	86
3.4. Simulations results	88
3.4.1. Choice of the threshold ς	88
3.4.2. Effect of the choice of e_σ on the detector performance	89
3.4.3. Detector performance under non-WSS channel model and synchronization mismatch	92
3.4.4. Receiver operating characteristic of the detector	94
3.5. Summary	98

CONCLUSION	99
