General Introduction	xi
PART 1. THE STRUCTURE OF THE GEOGRAPHIC SPACE	1
Part 1. Introduction	3
Chapter 1. Structure and System Concepts	5
1.1. The notion of structure	5
1.1.1. In mathematics and in physics	6
1.1.2. In computer science	7
1.1.3. In human, social and life sciences	8
1.2. The systemic paradigm	10
1.2.1. The systemic triangle.	10
1.2.2. The whole is greater than the sum of its parts	12
1.3. The notion of organization	13
1.3.1. Structure and organization	14
1.3.2. Sequential organizations.	15
1.3.3. Organization in classes and partitions	17
1.3.4. Organizations in trees	17
1.3.5. Network organization	19
1.3.6. Hierarchical organizations.	21
1.3.7. The use of the graph theory for complex organizations	23
1.3.8. Complexity of an organization, from determinism to chaos.	25
Chapter 2. Space and Geometry	29
2.1. Different theories of space	29
2.1.1. Euclidian models	31
2.1.2. Metric spaces	32

2.1.3. Normed spaces	34
2.1.4. Pseudo-Euclidian spaces.	36
2.1.5. Riemann's spaces	38
2.1.6. Topological spaces	41
2.1.7. About equality in a space	42
2.2. Geometry and its data structures	43
2.2.1. Planes structure	44
2.2.2. The elevation model ($2D^{1/2}$).	49
2.2.3. Non-Euclidian space, anamorphoses and gravitation field.	56
2.2.4. Possible morphologies of a finite space without limits	58
2.3. "Neat" geometry and "fuzzy" geometry	60
Chapter 3. Topological Structures: How Objects are Organized in Spatial Systems	67
3.1. Topology	67
3.2. Metrics and topologies	68
3.3. Calculated topology, structural topology	71
3.3.1. Square grid.	71
3.3.2. Hexagonal grid	72
3.3.3. Neighborhood structure for an irregular mesh	73
3.3.4. Neighborhood operator for an irregular mesh	76
3.3.5. "Vector-topological" model of a meshing of random zones.	76
3.3.6. Network topological model	77
3.4. Hierarchization.	78
Chapter 4. Matter and Geographical Objects.	79
4.1. Geographic matter	79
4.1.1. The material field	80
4.1.2. Hypothesis of spatial and temporal differentiation of matter	80
4.2. The notion of observation	82
4.3. The geographic object: Definitions and principles	84
4.3.1. Identification	87
4.3.2. Spatial base of an object.	88
4.3.3. Material content of an object	88
4.3.4. Material geographic object and layers of objects	88
4.3.5. The principle of separation	89
4.3.6. The principle of mixing	89
4.3.7. The principle of impenetrability	90
4.3.8. The dimensionality of an object	91
4.3.9. The principle of embedding.	92
4.3.10. Evaluated geographic object.	92
4.3.11. Description forms of the object	94

Chapter 5. Time and Dynamics	97
5.1. Time	97
5.2. Temporalities	100
5.2.1. Life interval T	101
5.2.2. Minimum time step dt	101
5.2.3. Time base B_T	101
5.2.4. Activity support of a phenomenon σ	103
5.2.5. Phenomenon with discrete (or isolated) support	104
5.2.6. Phenomenon with continuous or piecewise continuous support	104
5.3. Events, processes	105
5.3.1. Morphological discretization of a phenomenon	109
5.3.2. Billiard balls example	109
5.3.3. Temporality of a spatial process	113
5.4. Decomposition of a complex process	115
5.5. An epistemic choice: reciprocal dependency between the complexity levels of a phenomenon	117
Chapter 6. Spatial Interaction	121
6.1. Presentation of the concept.	121
6.2. Definition of macroscopic interaction	125
6.3. The four elementary (inter)actions	127
6.4. Microscopic interaction like a multigraph	128
6.5. Composition of successive interactions	130
6.6. The configurations and the trajectories of a simulation are categories.	131
6.7. Intermediary level matrix representation	133
6.8. Examples of interactions	134
6.8.1. Flux and transport	134
6.8.2. Movement of an object in space	135
6.8.3. Collision between two objects	135
6.8.4. Accumulation by confluence	136
6.8.5. Centrifugal distribution	137
6.8.6. Equalization through communication vases	137
6.9. First definition of the notion of spatial system	138
Part 1. Conclusion: Stages of the Ontogenesis	141
PART 2. MODELING THROUGH CELLULAR AUTOMATA	145
Chapter 7. Concept and Formalization of a CA	147
7.1. Cellular automata paradigm	148

7.2. Notion of finite-state automata	150
7.3. Mealy and Moore automata	151
7.4. A simple example of CA: the game of life	152
7.5. Different decompositions of the functions of a cell	153
7.6. Threshold automaton, window automaton.	155
7.7. Micro level and Stochastic automaton	156
7.8. Macro level and deterministic automaton	156
7.9. General definition of a geographic cellular automaton	157
7.10. Different scheduling regimes of the internal tasks of the system.	160
7.11. Ports, channels, encapsulation	162
7.12. Interaction	164
7.13. Space associated with a geographic cellular automaton	168
7.14. Topology and neighborhood operator of a GCA	168
7.15. The notion of cellular layer.	168
7.16. Hierarchized GCA models	169
7.16.1. Spatial hierarchization	169
7.16.2. Temporal hierarchization	169
7.16.3. Hierarchization of the control	170
Chapter 8. Examples of Geographic Cellular Automaton Models	171
8.1. SpaCelle, multi-layer cellular automaton	172
8.1.1. Description.	172
8.1.2. Choice of metrics and the notion of neighborhood in SpaCelle.	173
8.1.3. Universe Structures.	173
8.1.4. Definition of cellular behavior with SpaCelle	174
8.1.5. General structure of a model	175
8.1.6. Cellular behavior, birth, life and death, law of the most pertinent rule	175
8.1.7. Deterministic or stochastic functioning	176
8.1.8. Rule syntax	176
8.1.9. Calculation of the pertinence of a transition rule	177
8.1.10. Strict or fuzzy evaluation of a neighborhood	178
8.1.11. The rule base.	179
8.1.12. The SpaCelle meta-model	180
8.1.13. Outputs	180
8.2. Example: the evolution model of the Rouen agglomeration	181
8.2.1. From the map to the cellular automaton.	181
8.2.2. The rule base	182
8.2.3. Evolution observed in the Rouen space between 1950 and 1994	183
8.2.4. Current assessment of SpaCelle use	188

8.3. RuiCells	189
8.3.1. Presentation of the model	190
8.3.2. Recognition of soil occupation and surface development	194
8.3.3. Functioning	196
8.3.4. The outputs	203
8.4. GeoCells	207
8.4.1. The generic GeoCells model	207
8.4.2. The GeoCells-Europe model	212
8.4.3. The GeoCells-Votes model	224
Part 2. Conclusion	235
PART 3. A GENERAL MODEL OF GEOGRAPHIC AGENT SYSTEMS.	237
Part 3. Introduction	239
Chapter 9. Theoretical Approach of an Integrated Simulation Platform	241
9.1. For an integrated platform of simulation.	241
9.2. General specifications.	242
Chapter 10. A Formal Ontology of Geographic Agent Systems.	245
10.1. The conceptual framework	245
10.2. The notion of a geographic agent system	247
10.3. A generalization of the notion of process	249
10.4. The notion of a geographic agent	250
10.4.1. When the geographic object becomes an agent	250
10.4.2. The agent dynamics.	251
10.4.3. The agent-organization duality	252
10.4.4. The formalization of the geographic agent	254
10.5. The formalization of the notion of organization	258
10.5.1. Re-examining the concept of organization	258
10.5.2. Social organization, spatial organization	260
10.5.3. Formalization	262
10.5.4. Two examples of organization	263
10.5.5. Predefined spatial organization	264
10.5.6. Predefined social organization	268
10.6. The formalization of behavior	268
10.6.1. The evaluation	269
10.6.2. The decision	270
10.6.3. The action	271
10.6.4. The formalization of a basic behavior	272

10.7. Formalization of a general AOC model	279
10.8. The Schelling model example	280
Part 3. Conclusion	283
General Conclusion	285
Acronyms	291
Bibliography	293
Index	299
