General Introduction	xi
PART 1. A PARADOXICAL RESEARCH FIELD	1
Chapter 1. The Initial Problem	5
1.1. Introduction.	5
1.2. The decision makers and their consultants' usual work	11
1.2.1. Identifying the admissible alternatives	11
1.2.2. Identifying the criteria	14
1.2.3. Evaluating alternatives.	15
1.2.4. Synthesizing the "data"	17
1.2.5. Interpreting the results of the calculation	21
1.3. Toward a paradigm for managerial decision-making	21
1.3.1. Criteria only in the form of preorderings?	24
1.3.2. Synthesis of data: choosing the method.	26
1.4. Exercises	28
1.5. Corrected exercises	32
Chapter 2. Paradoxes	35
2.1. Arrow's axiomatic system	36
2.2. May's axiomatic system	43
2.3. Strategic majority voting	44
2.3.1. The cake	44
2.3.2. A miser, a drunkard, and a health freak	45
2.4. Exercises	47
2.5. Corrected exercises	53

PART 2. A CENTRAL CASE: THE MAJORITY METHOD	57
Chapter 3. Majority Method and Limited Domain	61
3.1. Sen’s lemma [SEN 66]	62
3.2. Coombs’ condition	63
3.3. Black’s unimodality condition [BLA 48, BLA 58]	66
3.4. Romero’s arboricity	67
3.5. Romero’s quasi-unimodality	69
3.6. Arrow–Black’s single-peakedness	72
3.7. The C_{ij} ’s	74
3.8. Exercises	78
3.9. Corrected exercises	80
Chapter 4. Intuition Can Easily Suggest Errors	87
4.1. Inada’s conditions	87
4.2. Is the bipartition the same as the NITM condition?	88
4.3. Diversity of the NIMT condition	92
4.4. Exercises	94
4.5. Corrected exercises	94
Chapter 5. Would Transitivity be a Prohibitive Luxury?	97
5.1. Star-shapedness	98
5.2. Ward’s condition	101
5.2.1. In search of reasonable axiomatic limitations on the feasible domain for the criteria	101
5.2.2. A fundamental result	102
5.3. The failure of the majority method	104
5.4. Exercises	106
5.5. Corrected exercises	106
Conclusion of the Second Part	109
PART 3. AXIOMATIZING CHOICE FUNCTIONS	111
Chapter 6. Helpful Tools for the Sensible Decision Maker	117
6.1. The “habitual” decision maker and his/her traditional means	117
6.1.1. Decision makers’ reluctance in the face of the consultants’ “knowledge”	117
6.1.2. The “habitual” decision maker and the framing of Kahneman and Tversky	119
6.2. The habitual decision maker	124

6.2.1. A small history of utilitarianism	124
6.2.2. How can one explain utilitarianism's success?	128
6.2.3. What remains of utilitarianism if it wants to support a well-founded decision-making theory?	130
6.3. A "sensible" decision maker confronted with a difficult decision	137
6.4. The urgency of raising the moral standard of the market	138
6.5. Conclusion	141
6.6. Exercises	146
6.7. Corrected exercises	149
Chapter 7. An Important Class of Choice Functions	153
7.1. Introduction.	153
7.2. The problem: various definitions	154
7.3. Natural properties of the E -matrices and B - F -matrices	156
7.4. Choice functions that depend only on the E -matrix or on the B - F -matrix.	158
7.5. Characterization of the choice functions that depend only on the E -matrix (respectively, B - F -matrix).	161
7.6. Conclusion	163
7.7. Exercises	165
7.8. Corrected exercises	167
Chapter 8. Prudent Choice Functions.	171
8.1. Introduction.	171
8.2. Toward the prudence axiom	172
8.2.1. The Condorcet principle.	173
8.2.2. The mindominance principle	175
8.2.3. The maxdomination principle.	175
8.2.4. The prudence principle.	177
8.3. Properties related to prudence for choice functions	179
8.4. Exercises	182
8.5. Corrected exercises	186
Chapter 9. Often Implicit Axioms: Sovereignty, Homogeneity, Decision by Rejection or Selection, Prudence and Violence	191
9.1. Introduction.	191
9.2. Sovereignty.	193
9.2.1. About the definition domain of the criteria.	193
9.2.2. About the image of the choice function.	195
9.3. Homogeneous choice	195
9.4. Choice by selection and choice by rejection	198

9.5. Violent choice and prudent choice	202
9.6. Exercises	205
9.7. Corrected exercises	207
Chapter 10. Coherent Choice Functions	211
10.1. Introduction	211
10.2. Characterization of the Borda method	211
10.3. Coherence and the other axioms	218
10.3.1. Coherence and Condorcet choice function	218
10.3.2. Coherence and prudence	221
10.4. Exercises	223
10.5. Corrected exercises	224
Chapter 11. Rationality and Independence	227
11.1. Introduction	227
11.2. Rationalities	228
11.3. Axioms of independence	237
11.4. The inclusive iteration principle	242
11.5. Conclusion	243
11.6. Exercises	245
11.7. Corrected exercises	246
Chapter 12. Monotonic Choice Functions	251
12.1. Introduction	251
12.2. Monotonicity defined	252
12.3. Prudence and monotonicity	258
12.4. Prudence and binary monotonic independence	260
12.5. Strong monotonicity	262
12.6. Exercises	263
12.7. Corrected exercises	264
PART 4. MULTICRITERION RANKING FUNCTIONS	267
Chapter 13. Sequentially Independent Rankings	275
13.1. Introduction	275
13.2. The sequential independence axioms	277
13.3. Sequential independence with current choice and rejection functions	281
13.4. Exercises	287
13.5. Corrected exercises	290

Chapter 14. Prudent Rankings	293
14.1. Introduction	293
14.2. Some unexpected theorems.	294
14.3. Prudent rankings	297
14.4. Prudence in preorders and iterated prudent choice	300
14.5. Exercises.	305
14.6. Corrected exercises	307
Chapter 15. Coherent Condorcet Rankings	313
15.1. Introduction	313
15.2. What does one call Kemeny’s method or second Condorcet method?	313
15.2.1. Sources of the method	313
15.2.2. Properties of Kemeny’s multifunction.	316
15.2.3. Values of Kemeny’s function on some particular profiles	318
15.3. Young and Levenglick’s theorem	319
15.4. Exercises.	322
15.5. Corrected exercises	326
Chapter 16. Monotonic Rankings	333
16.1. Definitions of monotonicity for ranking functions	333
16.1.1. Preliminary definitions.	333
16.1.2. Monotonicity axioms for ranking functions.	335
16.1.3. Relations between these definitions	338
16.2. Monotonicity of the most ordinary non-sequential multicriterion ranking function	339
16.2.1. Monotonocities and ordinary non-sequential ranking functions	340
16.2.2. With the sequential versions?	343
16.3. Various remarks	346
16.3.1. The bonds between monotonicity and independence are particularly strong: is monotonicity really as “expensive” as it seems to be?	346
16.3.2. Durand’s paradoxal theorem (iterated strongly monotonic and symmetrical choice function)	347
16.4. Exercises.	348
16.5. Corrected exercises	350

Concluding Remarks	355
Bibliography	367
APPENDICES	377
Appendix 1. Benjamin Franklin’s Letter.	379
Appendix 2. Pyramids and Snakes: Romero’s Algorithm	381
Appendix 3. A Few Widespread Commercial Multicriterion Decision Techniques.	387
Index	405
