| Foreword | ix |
| Preface | xi |
| Introduction | xv |
| List of Acronyms | xxxv |
| Chapter 1. Understanding the Investment Universe | 1 |
| 1.1. Introduction | 1 |
| 1.1.1. On the importance of stylized facts | 1 |
| 1.1.2. The particular role of volatility | 2 |
| 1.1.3. Scope of this chapter | 3 |
| 1.2. Computing returns | 4 |
| 1.2.1. Discrete-time modeling | 5 |
| 1.2.2. Continuous-time modeling | 6 |
| 1.2.3. Return moments | 7 |
| 1.2.4. Usual statistical assumptions on return distributions | 9 |
| 1.2.5. Aggregating returns | 11 |
| 1.3. Moment estimation | 12 |
| 1.3.1. Sample counterparts | 12 |
| 1.3.2. Expected return and covariance | 13 |
| 1.3.3. Skewness and kurtosis | 17 |
| 1.4. The time series properties of returns | 20 |
| 1.4.1. Expected returns and how they are linked with strategies | 21 |
| 1.4.2. The particular case of volatility | 23 |
| 1.4.3. Stylized facts for skewness | 27 |
| 1.4.4. Stylized facts for kurtosis | 32 |
| 1.5. Modeling financial returns and why it matters to an investment process | 32 |

| | |
|---|------------|
| 1.5.1. Modeling returns dynamically | 33 |
| 1.5.2. Volatility models | 35 |
| 1.5.3. Conditional distributions | 39 |
| 1.5.4. Numerical model comparison | 42 |
| 1.5.5. What to do with it | 44 |
| 1.6. Living in a world of factors | 45 |
| 1.6.1. Why risk factors matter | 45 |
| 1.6.2. Measuring risk factors | 51 |
| Chapter 2. Dealing with Risk Factors | 61 |
| 2.1. Dependence among markets | 63 |
| 2.1.1. Copulas | 63 |
| 2.1.2. Measures of dependence | 84 |
| 2.2. Linear factor models | 94 |
| 2.2.1. Why multifactor models? | 95 |
| 2.2.2. Types of linear factor models | 97 |
| 2.2.3. Adding empirical restrictions, gaining economic sense | 104 |
| 2.3. Risk factor dynamics: the state-space modeling framework | 110 |
| 2.3.1. Kalman filter | 111 |
| 2.3.2. State-space models with regime switching | 124 |
| 2.4. The liquidity risk factor | 135 |
| 2.4.1. Liquidity: a multiform and heterogeneous concept | 136 |
| 2.4.2. Sources and characteristics of illiquidity | 136 |
| 2.4.3. Liquidity and asset classes | 138 |
| 2.4.4. Measuring liquidity | 140 |
| 2.4.5. The liquidity premium: empirical findings and theoretical elements | 143 |
| 2.4.6. Managing liquidity risk: portfolio construction and the liquidity augmented VaR (L-VaR) | 146 |
| 2.5. Implications of low rates on risk modeling in fixed-income markets | 151 |
| 2.5.1. The risk-return trade-off in a low-rate environment | 151 |
| 2.5.2. Volatility in a low-yield environment | 155 |
| 2.5.3. Volatility of returns and the adequacy of usual sensitivity measures, duration and DTS, in a low-yield environment | 156 |
| Chapter 3. Active Portfolio Construction | 159 |
| 3.1. Introduction | 159 |
| 3.1.1. A statistical challenge and a need for regularization | 160 |
| 3.1.2. Some alternative options | 161 |
| 3.1.3. From strategies to expected returns | 162 |
| 3.1.4. Scope of this chapter | 165 |
| 3.2. A theoretical toolbox for allocation | 166 |
| 3.2.1. Motivations and notations | 166 |
| 3.2.2. Modern Portfolio Theory | 168 |

| | |
|---|------------|
| 3.3. A focus on mean-variance | 172 |
| 3.3.1. Mean-variance allocation | 173 |
| 3.3.2. Estimating moments | 176 |
| 3.3.3. The inversion puzzle | 180 |
| 3.3.4. Operator writing and regularization | 184 |
| 3.4. Spectral insights for allocation | 185 |
| 3.4.1. Should we work with covariance or correlation? | 186 |
| 3.4.2. PCA and SVD | 187 |
| 3.4.3. Eigen decomposition and financial interpretation | 188 |
| 3.4.4. Benefits of mean-variance allocation | 200 |
| 3.5. Allocating using views | 203 |
| 3.5.1. Improving covariance estimation | 203 |
| 3.5.2. Adding constraints | 213 |
| 3.5.3. Black-Litterman | 217 |
| 3.6. Allocating without views | 222 |
| 3.6.1. Risk-based allocation | 223 |
| 3.6.2. Properties, pitfalls and differences | 231 |
| 3.7. Dynamic trading | 234 |
| 3.7.1. Cost modeling | 235 |
| 3.7.2. A framework for optimal trading | 244 |
| Chapter 4. Backtesting and Statistical Significance of Performance | 259 |
| 4.1. Introduction | 259 |
| 4.2. Backtesting | 261 |
| 4.2.1. Providing accurate backtests | 261 |
| 4.2.2. In/out-of-sample | 263 |
| 4.2.3. Biases | 265 |
| 4.3. Performance statistics | 270 |
| 4.3.1. Numerical illustration | 270 |
| 4.3.2. Sharpe ratio | 271 |
| 4.3.3. Skewness and kurtosis | 278 |
| 4.3.4. Downside risk measures | 280 |
| 4.4. Statistical significance of performance | 284 |
| 4.4.1. Sharpe ratio annualization | 285 |
| 4.4.2. Testing significance with the Sharpe ratio | 288 |
| 4.4.3. A general test of significance | 291 |
| 4.4.4. Statistically equivalent strategies | 293 |
| 4.4.5. How to differentiate anomalies from risk premia? | 294 |
| Chapter 5. Gauging Economic Influences on Quantitative Strategies | 297 |
| 5.1. A tale of three strategies | 301 |
| 5.1.1. An equity equal risk contribution strategy | 301 |

| | |
|---|-----|
| 5.1.2. A carry strategy | 302 |
| 5.1.3. A commodity trend-following strategy | 303 |
| 5.2. Building economic condition indices | 306 |
| 5.3. Relating business conditions to market performances | 311 |
| 5.3.1. Economic condition regimes and returns on quantitative strategies | 312 |
| 5.3.2. Economic condition indices' level and returns on quantitative strategies | 316 |
| 5.3.3. Nonlinearities between economic information and financial returns | 319 |
| 5.4. The impact of economic information on a strategy's performance | 323 |
| 5.4.1. The integration of surprises in economic information in asset prices | 323 |
| 5.4.2. An analysis of the impact of economic news on each strategy | 324 |
| Appendix | 329 |
| Conclusion | 347 |
| Bibliography | 349 |
| Index | 387 |
