PREFACE	xi
CHAPTER 1. RELIABILITY-BASED DESIGN OPTIMIZATION	1
Philippe POUCKET and Hichame MAANANE	
1.1. Introduction	2
1.2. Reliability-based design optimization	3
1.2.1. Risk assessment using predictive reliability calculations	5
1.2.2. Identifying elements critical for the reliability of the system.	7
1.2.3. Determination of the distribution of stresses leading to failures	9
1.2.4. Determining the critical effect of stresses	11
1.2.5. Inducing failures for failure mechanism analysis	15
1.2.6. Failure mechanism modeling	19
1.2.7. Design optimization	21
1.3. Conclusion.	23
1.4. Bibliography.	24
CHAPTER 2. NON-DESTRUCTIVE CHARACTERIZATION BY SPECTROSCOPIC ELLIPSOMETRY OF INTERFACES IN MECHATRONIC DEVICES	27
Pierre Richard DAHOO, Malika KHETTAB, Jorge LINARES and Philippe POUCKET	
2.1. Introduction	28
2.2. Relationship between the ellipsometric parameters and the optical characteristics of a sample	30

2.3. Rotating component or phase modulator ellipsometers.	32
2.4. Relationship between ellipsometric parameters and intensity of the detected signal.	33
2.5. Analysis of experimental data	34
2.6. The stack structural model	37
2.7. The optical model.	38
2.8. Application of ellipsometry technique	41
2.8.1. Thin layer from silver nanograins sintered on a copper substrate	42
2.8.2. Analysis of ellipsometric spectra of polymers on different substrates.	45
2.8.3. Analysis and comparison after stress	50
2.8.4. Physical analysis of light and matter interaction in terms of band gap energy.	52
2.9. Conclusion.	53
2.10. Bibliography	54

**CHAPTER 3. METHOD OF CHARACTERIZING THE
ELECTROMAGNETIC ENVIRONMENT IN HYPERFREQUENCY
CIRCUITS ENCAPSULATED WITHIN METALLIC CAVITIES 57**

Samh KHEMIRI, Abhishek RAMANUJAN, Moncef KADI and Zouheir RIAH

3.1. Introduction	57
3.2. Theory of metallic cavities	58
3.2.1. Definition	58
3.2.2. Electromagnetic field in a parallelepiped cavity	59
3.2.3. Resonance frequencies	59
3.3. Effect of metal cavities on the radiated emissions of microwave circuits	61
3.3.1. Circuit case study: 50 Ω microstrip line	61
3.4. Approximation of the electromagnetic field radiated in the presence of the cavity from the electromagnetic field radiated without cavity	67
3.4.1. Principle of the approach	67
3.4.2. Radiated emission model.	67
3.4.3. Results and discussion	72
3.5. Conclusion.	75
3.6. Bibliography.	76

CHAPTER 4. METROLOGY OF STATIC AND DYNAMIC DISPLACEMENTS AND DEFORMATIONS USING FULL-FIELD TECHNIQUES	79
Ioana NISTEA and Dan BORZA	
4.1. Introduction	79
4.2. Speckle interferometry	82
4.2.1. Principles of displacement field metrology by speckle interferometry	82
4.2.2. Description of the speckle interferometry measurement setup	90
4.2.3. Examples of static displacement field measurements	91
4.2.4. Examples of measurements of vibration displacements fields	100
4.2.5. Examples of dynamic measurements	106
4.3. Moiré projection	107
4.3.1. Measurement principles of Moiré projection for displacement fields	108
4.3.2. Description of the Moiré projection measurement setup	110
4.3.3. Examples of displacement field metrology by Moiré projection	111
4.4. Structured light projection	112
4.4.1. Principles of structured light projection for measuring surface topography	112
4.4.2. Description of the structured light projection measurement setup	114
4.4.3. Examples of surface topography measurements by structured light projection	115
4.5. Conclusion	117
4.6. Bibliography	117
CHAPTER 5. CHARACTERIZATION OF SWITCHING TRANSISTORS UNDER ELECTRICAL OVERVOLTAGE STRESSES	119
Patrick MARTIN, Ludovic LACHEZE, Alain KAMDEL and Philippe DESCAMPS	
5.1. Introduction	119
5.2. Stress test over ESD/EOV electric constraints	120
5.2.1. Description of the TPG test equipment	120
5.2.2. Stresses applied to the transistor	121
5.2.3. Testing procedure	123
5.2.4. TPG capabilities	124
5.3. Simulation results	125

5.3.1. Highlighted phenomena	125
5.3.2. Influence of parasitic phenomena	125
5.4. Experimental setup	128
5.4.1. Measurement results and analysis of observed phenomena	130
5.5. Conclusion	138
5.6. Bibliography	139
CHAPTER 6. RELIABILITY OF RADIO FREQUENCY POWER TRANSISTORS TO ELECTROMAGNETIC AND THERMAL STRESS	141
Samh KHEMIRI and Moncef KADI	
6.1. Introduction	141
6.2. The GaN technology	142
6.3. Radiated electromagnetic stress	144
6.3.1. Presentation of the test equipment	144
6.3.2. Results and analysis	145
6.4. RF CW continuous stress	149
6.4.1. Presentation of the test equipment	149
6.4.2. Results and analysis	149
6.5. Thermal exposure	152
6.5.1. Presentation of the test equipment	152
6.5.2. Results and analysis	153
6.6. Combined stresses: RF CW + electromagnetic (EM) and electric + EM	156
6.6.1. Effect of the simultaneous application of electromagnetic and RF stresses	156
6.6.2. Effect of the simultaneous application of electromagnetic and continuous DC stresses	158
6.7. Conclusion	161
6.8. Bibliography	161
CHAPTER 7. INTERNAL TEMPERATURE MEASUREMENT OF ELECTRONIC COMPONENTS	165
Eric JOUBERT, Olivier LATRY, Pascal DHERBECOURT, Maxime FONTAINE, Christian GAUTIER, Hubert POLAERT and Philippe EUDELINÉ	
7.1. Introduction	165
7.2. Experimental setup	166
7.3. Measurement Results	168
7.3.1. IR measurements	168
7.3.2. Electrical measures	171
7.3.3. Optical measurement methods	174

7.3.4. Comparison between infrared and electrical methods	180
7.4. Conclusion	182
7.5. Bibliography	184

CHAPTER 8. RELIABILITY PREDICTION OF EMBEDDED ELECTRONIC SYSTEMS: THE FIDES GUIDE 185

Philippe POUGET, Franck BAYLE, Hichame MAANANE and Pierre Richard DAHOO

8.1. Introduction	185
8.2. Presentation of the FIDES guide	187
8.2.1. Global modeling	187
8.2.2. Generic model	187
8.2.3. Mathematical foundations	188
8.2.4. Justifying the use of a constant failure rate/intensity	189
8.2.5. Assessing λ_0	190
8.2.6. Acceleration factors	191
8.2.7. Life profile	192
8.2.8. Testing performed at electronic board level	194
8.2.9. Component-level testing	197
8.2.10. “Component family” testing	197
8.2.11. Example of “MOSFET” power transistors	199
8.3. FIDES calculation on an automotive mechatronic system	200
8.3.1. Goals of the FIDES calculation	201
8.3.2. Methodology	201
8.3.3. Life profile	202
8.3.4. Results for the SMI board components	207
8.3.5. Results for the FR4 board components	207
8.3.6. Failure rate of the DC-DC converter	208
8.3.7. Effect of the amplitude of the thermal cycles on the lifetime	209
8.3.8. Comparison with the results of the UTE C 80-810 standard	210
8.4. Conclusion	210
8.5. Bibliography	210

CHAPTER 9. STUDY OF THE DYNAMIC CONTACT BETWEEN DEFORMABLE SOLIDS 213

Bouchaïb RADI and Abdelkhalak EL HAMI

9.1. Introduction	213
9.2. Preliminaries	215
9.3. Main results	217

9.4. Proposed numerical method.	222
9.4.1. Contact treatment	223
9.4.2. Time integration algorithm.	224
9.5. Numerical results	225
9.5.1. Principles of motors based on travelling waves.	225
9.5.2. Modeling and results	228
9.6. Conclusion.	230
9.7. Bibliography.	231
LIST OF AUTHORS	233
INDEX.	235
SUMMARY OF VOLUME 2.	237
